

STAFF REPORT

Report To: Board of Supervisors

Meeting Date: March 17, 2016

Staff Contact: Susan Dorr Pansky, Planning Manager (spansky@carson.org)

Agenda Title: For Possible Action: To approve a Master Plan Amendment request from Blackstone Development Group (property owners: MTK Properties, LLC, Arraiz Family Trust and Tom & Martha Keating Family Trust) to create a new Specific Plan Area for the north portion of the existing Lompa Ranch Specific Plan Area, on property located on the north side of East 5th Street between Saliman Road and Airport Road, APNs 010-041-16, -38, -52, -70, -71 and -73. (MPA-15-162)

Staff Summary: The Lompa Ranch Specific Plan (LR-SPA) was created as a part of the Carson City Master Plan in 2006 and includes the subject properties plus additional properties on the south side of 5th Street. Because future development plans for the parcels were not known at that time, a policy was created requiring that a new Specific Plan Area be approved prior to any development occurring on the property. The current master plan designations under the LR-SPA include Neighborhood Commercial (NC), Mixed-Use Commercial (MUC), Mixed-Use Employment (MUE) and Open Space (OS). The applicant is proposing a new Specific Plan Area to include the master plan designations of Medium Density Residential (MDR), High Density Residential (HDR), Mixed-Use Residential (MUR), Neighborhood Commercial (NC), Mixed-Use Commercial (MUC) and Open Space (OS), and addresses all LR-SPA policies including land use policies, circulation and access policies, environmental policies, community character and design policies, parks and open space policies, public utilities, services and facilities policies and fire and police protection policies.

Agenda Action: Formal Action/Motion

Time Requested: 1 Hour

Proposed Motion

I move to approve a Master Plan Amendment request from Blackstone Development Group (property owners: MTK Properties, LLC, Arraiz Family Trust and Tom and Martha Keating Family Trust) to create a new Specific Plan Area for the north portion of the existing Lompa Ranch Specific Plan Area, on property located on the north side of East 5th Street between Saliman Road and Airport Road, APNs 010-041-16, -38, -52, -70, -71 and -73 with the document revisions proposed by staff and based on the findings contained in the staff report.

Board's Strategic Goal

Economic Development

Previous Action

The Planning Commission adopted Resolution 2016-PC-R-2 recommending approval of the proposed Master Plan Amendment by a vote of 6 ayes, 0 nays and 1 absent.

Background/Issues & Analysis

The Board of Supervisors is required to take final action on all Master Plan Amendments. Please see the attached staff report to the Planning Commission for further information.

Attachments:

RESOLUTION 2016-PC-R-2

A RESOLUTION RECOMMENDING TO THE BOARD OF SUPERVISORS APPROVAL OF MPA-15-162, A MASTER PLAN AMENDMENT TO CREATE A NEW SPECIFIC PLAN AREA FOR THE NORTH PORTION OF THE EXISTING LOMPA RANCH SPECIFIC PLAN AREA AND TO CHANGE THE LAND USE MAP DESIGNATION ON PROPERTY LOCATED ON THE NORTH SIDE OF EAST 5TH STREET BETWEEN SALIMAN ROAD AND AIRPORT ROAD, APNS 010-041-16, -38, -52, -70, -71 AND -73 FROM NEIGHBORHOOD COMMERCIAL (NC), MIXED-USE COMMERCIAL (MUC), MIXED-USE EMPLOYMENT (MUE), MIXED-USE RESIDENTIAL (MUR) AND OPEN SPACE (OS) TO MEDIUM DENSITY RESIDENTIAL (MDR), HIGH DENSITY RESIDENTIAL (HDR), MIXED-USE RESIDENTIAL (MUR), NEIGHBORHOOD COMMERCIAL (NC), MIXED USE COMMERCIAL (MUC) AND OPEN SPACE (OS)

WHEREAS, NRS 278.210 requires that any adoption of a Master Plan Amendment shall be by resolution of the Planning Commission; and

WHEREAS, the Planning Commission has given proper notice of the proposed amendment in accordance with the provisions of NRS and CCMC 18.02.070, and is in conformance with City and State legal requirements; and

WHEREAS, on February 24, 2016, the Planning Commission obtained public testimony and duly considered recommendations and findings for the proposed master plan amendment and approved Master Plan Amendment MPA-15-162 by an affirmative vote of a two-thirds majority of the Commission, at least five members of the seven-member Commission, pursuant to NRS 278.210, based on four findings of fact; and

WHEREAS, the proposed Master Plan land use designations and Specific Plan Area would be consistent with the existing and intended uses of the property;

NOW, THEREFORE, the Carson City Planning Commission hereby recommends to the Board of Supervisors approval of the Master Plan Amendment to create a new Specific Plan Area for the north portion of the existing Lompa Ranch Specific Plan Area and to change the Land Use Map Designation on property located on the north side of East 5th Street between Saliman Road and Airport Road, APNs 010-041-16, -38, -52, -70, -71 and -73 from Neighborhood Commercial (NC), Mixed-Use Commercial (MUC), Mixed-Use Employment (MUE), Mixed-Use Residential (MUR) and Open Space (OS) to Medium Density Residential (MDR), High Density Residential (HDR), Mixed-Use Residential (MUR), Neighborhood Commercial (NC), Mixed-Use Commercial (MUC) and Open Space (OS) as illustrated in the attached "Exhibit A", further detailed in the Lompa Ranch North Specific Plan standards handbook approved with staff's recommended changes as MPA-15-162, and incorporated into this Resolution by reference.

ADOPTED this 24th day of February, 2016.

VOTE: AYES: Paul Esswein, Chairman

CASE RECORD

MEETING DATE: February 24, 2016

AGENDA ITEM NO.: F-1a&b

APPLICANT(s) NAME: Blackstone Development Group

FILE NO. MPA-15-162
ZMA-15-163

PROPERTY OWNER(s): MTK Properties, LLC, Arraiz Family Trust and Tom & Martha Keating Family Trust

ASSESSOR PARCEL NO(s): 010-041-16, -38, -52, -70, -71 and -73

ADDRESS: north side of East 5th Street between Saliman Road and Airport Road

APPLICANT'S REQUEST:

Master Plan Amendment: To adopt a resolution recommending to the Board of Supervisors approval of a Master Plan Amendment to create a new Specific Plan Area for the north portion of the existing Lompa Ranch Specific Plan Area.

Zoning Map Amendment: To recommend to the Board of Supervisors approval of a Zoning Map Amendment to change the zoning from Single Family One Acre (SF1A) and Agriculture (A) to Single Family 6,000 (SF6), Multi-Family Duplex (MFD), Multi-Family Apartment (MFA), Neighborhood Business (NB) and General Commercial (GC).

COMMISSIONERS PRESENT: CASTRO ESSWEIN SATTLER

 GREEN SALERNO OWEN MONROY

STAFF REPORT PRESENTED BY: Susan Dorr Pansky
 REPORT ATTACHED

STAFF RECOMMENDATION: APPROVAL w/Staff's recommended text changes and revisions presented at the Planning Commission meeting

APPLICANT REPRESENTED BY: Mike Railey, Rubicon Design Group

APPLICANT/AGENT WAS and PRESENT and SPOKE

APPLICANT/AGENT INDICATED THAT HE/SHE HAS READ THE STAFF REPORT, AGREES AND UNDERSTANDS THE FINDINGS, RECOMMENDATIONS, AND CONDITIONS, AND AGREES TO CONFORM TO THE REQUIREMENTS THEREOF.

_____ PERSONS SPOKE IN FAVOR OF THE PROPOSAL PERSONS SPOKE IN OPPOSITION OF THE PROPOSAL

DISCUSSION, NOTES, COMMENTS FOR THE RECORD:

- Sattler – Complement on dog park. Will other parks be dog friendly? No chain link fences-complement on that too.
- Salerno – Concerned about fencing and wind damage, wet lands at SE corner. That will be addressed with FEMA? Will all utilities be underground?
- Railey – Wind load could be considered. Will be a HOA to enforce maintenance of fencing. Wouldn't be opposed to wind fencing language in the SPA.
- Monroy – Regarding FEMA, what happens if FEMA doesn't approve letter for change?
- Salerno – The spine road is flexible? Will it move?

- Esswein - Major change from existing Lompa Ranch Specific Plan. Seems like moving toward more at a multi-family type project. What about the mixed use zoning associated with the mixed use commercial and residential land use designations?
- Owen – Will the central intersection be a roundabout?
- Esswein – The SPA says that drainage improvements will occur as development occurs. Shouldn't the drainage be handled to serve the whole development at an earlier stage?
- Sattler – Is SF6 40-50% of the project? What is the total number of units?
- Railey – At max it would be 2500, better estimate is 1500 including multi-family.

Public Comment:

- Darryl Harris (Meadows Resident) – Question regarding zoning and flood plain. Wondering if the property adjacent to Meadows will be impacted.
- Esswein – No, that is not a part of this project.
- Kathleen Flanagan (Appaloosa Ct.) – How will the cul-de-sacs be impacted by traffic on Saliman? Will there be low-income housing? Where will the fire station go?
- Chief Schreihans – Looking at property near the Animal Services building that the City currently owns.
- Kathleen Flanagan (Appaloosa Ct.) – Traffic, fire station location, water usage, effect on property taxes?
- Kyle Lastiri (Evan Street) – Start and completion dates?
- John Foody (1528 Goldfield) – There is a lot of development of apartments-how can you approve that zoning without knowing the traffic impacts?
- Hal Saylor (NE Corner Green Dr/Green Ct.) – Traffic is already “bad.” Water problem in NE portion of SPA. Took FEMA 15 years to come around on flood insurance for our property. Have issues with pumping water out from under the foundations in our development.
- Darryl Harris (Meadow Resident) – What is NB?
- Lisa Butterfield (Green Dr./Green Ct. area) – Notification comments. Read letter into the record, but did not provide a copy. Concerned development will cause new flooding, noise, crime, traffic, water, view, property values, jobs, wildlife, pollution, Carson Street narrowing. Bought house in 2007.
- Margo Muller (50+ year resident) – Projects start and don't get completed. How can you guarantee this development will happen?
- Kathleen Flanagan – Existing businesses are empty. Why would you want to approve more commercial development?

MOTION WAS MADE TO RECOMMEND APPROVE WITH THE FINDINGS AS ENUMERATED ON THE STAFF REPORT.

STAFF REPORT FOR PLANNING COMMISSION MEETING OF FEBRUARY 24, 2016

FILE: MPA-15-162 and ZMA-15-163

AGENDA ITEM: F-1(A) and (B)

STAFF AUTHOR: Susan Dorr Pansky, Planning Manager

MASTER PLAN AMENDMENT REQUEST: To adopt a resolution recommending to the Board of Supervisors approval of a Master Plan Amendment to create a new Specific Plan Area for the north portion of the existing Lompa Ranch Specific Plan Area.

ZONING MAP AMENDMENT REQUEST: To recommend to the Board of Supervisors approval of a Zoning Map Amendment to change the zoning from Single Family One Acre (SF1A) and Agriculture (A) to Single Family 6,000 (SF6), Multi-Family Duplex (MFD), Multi-Family Apartment (MFA), Neighborhood Business (NB) and General Commercial (GC).

APPLICANT: Blackstone Development Group

OWNERS: MTK Properties, LLC, Arraiz Family Trust and Tom and Martha Keating Family Trust

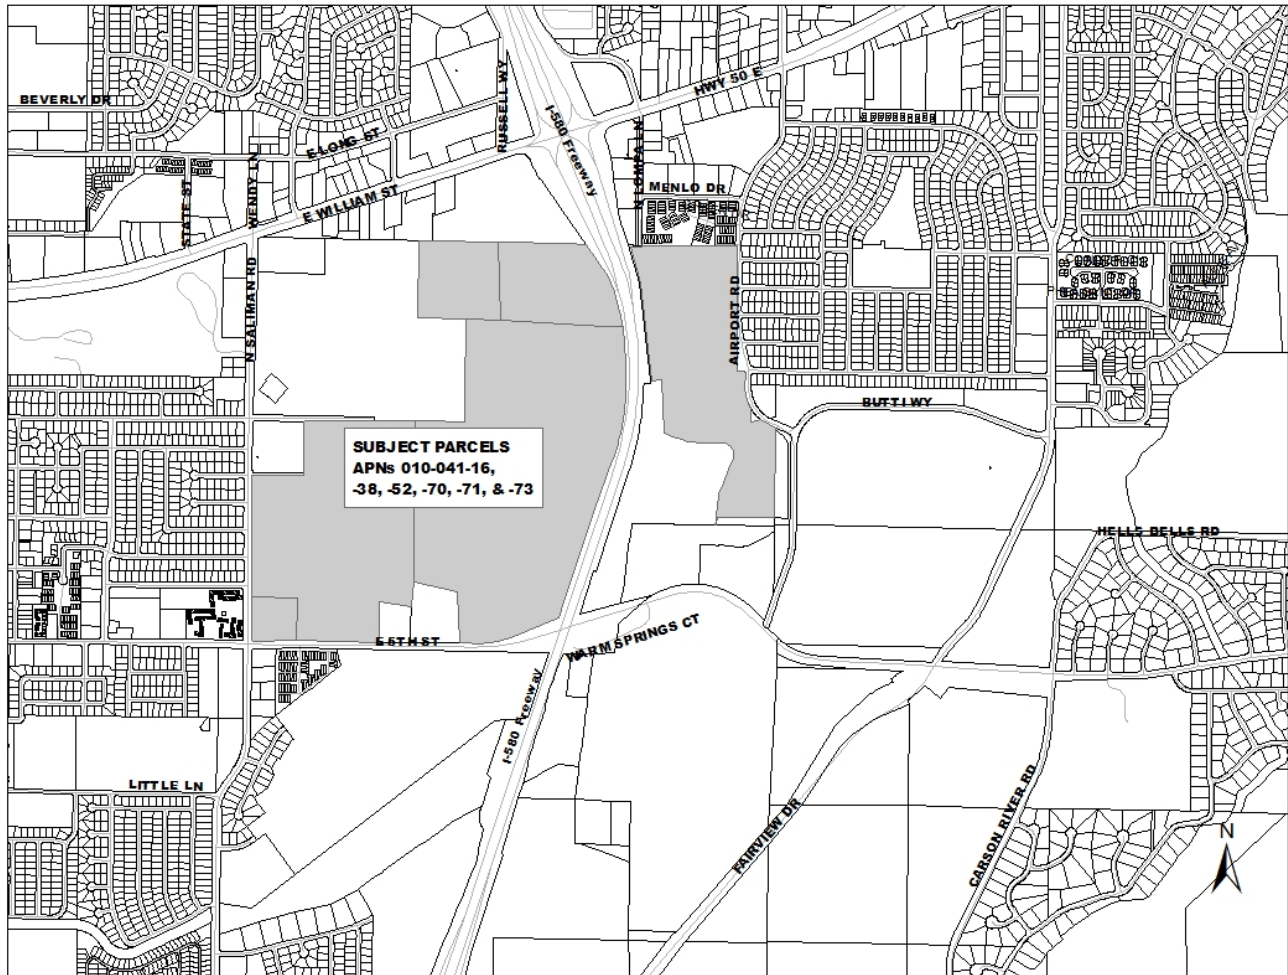

APNs: 010-041-16, -38, -52, -70, -71 and -73

LOCATION: North side of East 5th Street between Saliman Road and Airport Road

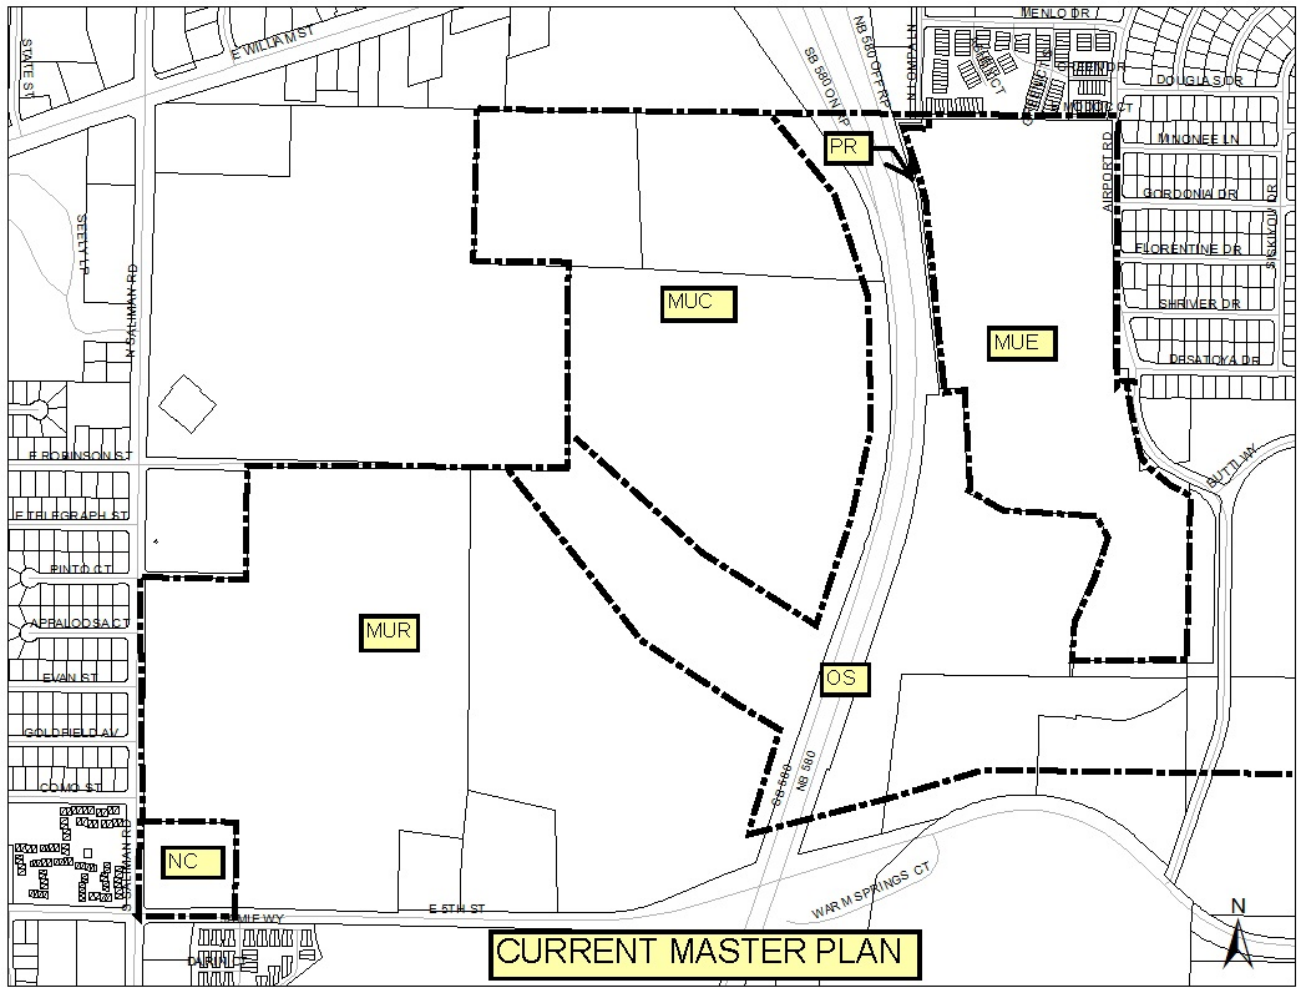

MASTER PLAN AMENDMENT RECOMMENDED MOTION: “I move to adopt Resolution No. 2016-PC-R-2 recommending to the Board of Supervisors approval of MPA-15-162, a Master Plan Amendment from Blackstone Development Group (property owners: MTK Properties, LLC, Arraiz Family Trust and Tom and Martha Keating Family Trust) to create a new Specific Plan Area for the north portion of the existing Lompa Ranch Specific Plan Area, on property located on the north side of East 5th Street between Saliman Road and Airport Road, APNs 010-041-16, -38, -52, -70, -71 and -73 with the document revisions proposed by staff and based on the findings contained in the staff report.”

ZONING MAP AMENDMENT RECOMMENDED MOTION: “I move to recommend to the Board of Supervisors approval of ZMA-15-163, a Zoning Map Amendment from Blackstone Development Group (property owners: MTK Properties, LLC, Arraiz Family Trust and Tom & Martha Keating Family Trust) to change the zoning from Single Family One Acre and Agriculture to Single Family 6,000, Multi-Family Duplex, Multi-Family Apartment, Neighborhood Business and General Commercial on property located on the north side of East 5th Street between Saliman Road and Airport Road, APNs 010-041-16, -38, -52, -70,-71 and -73 based on the findings contained in the staff report.”

EXISTING ZONING

PROPOSED ZONING

LEGAL REQUIREMENTS: CCMC 18.02.050 (Review); 18.02.070 (Master Plan); 18.02.075 Zoning Map Amendments and Zoning Code Amendments

DISCUSSION:

When the Carson City Master Plan was adopted in 2006, it included a specific plan area for the Lompa Ranch that established policies to provide framework for the future development of the property. The Lompa Ranch Specific Plan Area (SPA) policies were created to ensure that any development of this large area of vacant land would accomplish the following:

- Provide for a comprehensive development plan for a balanced mix of land uses and a variety of housing options;
- Ensure the creation of cohesive neighborhoods within the SPA;
- Ensure adequate vehicular and non-motorized circulation throughout the SPA;
- Ensure the compatibility of future development with established neighborhoods in the area;
- Ensure that adequate public facilities and services will be provided to serve the area;
- Will not adversely impact the public health, safety and welfare.

The Lompa Ranch properties included in this application consist of the parcels on the north side of East 5th Street between Saliman Road and Airport Road. The overall Lompa Ranch SPA includes parcels to the south of East 5th Street between Saliman Road and the I-580 Freeway, but those parcels are not a part of this application.

The current Lompa Ranch SPA includes the land use designations Mixed-Use Residential (MUR), Mixed-Use Commercial (MUC), Mixed-Use Employment (MUE) and Open Space (OS) as placeholders to convey the city's general expectation for a mix of land uses and housing types along with adequate open space and recreation opportunities when the property develops. However, there is a requirement in the current Lompa Ranch SPA to create a new SPA to more specifically establish intended land uses for the properties. Adhering to this requirement, the applicant has proposed a new SPA (hereinafter referred to as the Lompa Ranch North SPA) with revised land use designations on the north side of East 5th Street through the Master Plan Amendment process, as well as a Zoning Map Amendment to change the underlying zoning of the property to be consistent with the new land use designations.

Specifically, the applicant is proposing a mix of land use designations for the subject properties that include the following:

- Medium Density Residential (MDR)
- High Density Residential (HDR)
- Mixed-Use Residential (MUR)
- Neighborhood Commercial (NC)
- Mixed-Use Commercial (MUC)
- Open Space (OS)

The applicant's proposed zoning districts included to create consistency between the land use designations and the underlying zoning are as follows:

- Single Family 6,000 (SF6)
- Multi-Family Duplex (MFD)
- Multi-Family Apartment (MFA)
- Neighborhood Business (NB)
- General Commercial (GC)

As noted previously in the staff report, the applicant has proposed a new Lompa Ranch North SPA as required by the current SPA. Staff will address how the proposed Lompa Ranch North SPA adheres to each of the current Lompa Ranch SPA policies below. In addition, a redlined copy of the Lompa Ranch North SPA text showing modifications proposed by staff is included as an attachment to this staff report.

LR-SPA 1.1—Specific Plan Area Requirement

The Master Plan Land Use Map identifies a mix of uses for the property but is merely intended as a guide for future development of the property. Prior to any development occurring on the property, a new Specific Plan Area (SPA) must be approved to more specifically establish land uses, densities, design standards, and other standards pursuant to the general policies of this SPA. The SPA shall modify the Land Use Map, as appropriate, to identify land use areas, parks, open space, drainage facilities, etc. Appropriate zoning of the property may be included as part of the SPA process.

The applicant has proposed a new North Lompa Ranch SPA to comply with this policy requirement. The new SPA identifies modified land uses as discussed previously as well as appropriate zoning to accompany the modified land use designations. The North Lompa Ranch SPA also addresses parks, open space, drainage facilities, etc. which will be addressed in detail in subsequent sections.

The current applicant does not control properties to the south of East 5th Street, so a subsequent new SPA will be required for those properties prior to their development.

LR-SPA 1.2—Mix of Land Uses

The SPA encourages a mix of land uses, including a variety of residential densities, employment/office uses and commercial uses to serve the local neighborhood as well as the region. The incorporation of higher density housing within the mixed-use commercial area to compliment retail and employment uses is encouraged. The final SPA shall establish guidelines for the mix of uses desired within the Activity Center and the appropriate configuration (i.e. vertical or "stacked" mixed-use, or horizontal or "side-by-side" mixed-use) of uses within it.

As discussed in Section 1.3.3 of the proposed Lompa Ranch North SPA, neighborhood diversity is provided for by allowing a mix of residential densities and product types to support a wide variety of housing needs. Through the implementation of the proposed residential and commercial land use designations along with appropriate corresponding zoning, housing types including multi-family apartments, duplexes, townhomes, patio homes, townhomes and single family homes are encouraged throughout the Lompa Ranch North SPA. This variety of housing types is also intended to support proposed commercial uses within the SPA as well as surrounding existing commercial uses and growing employment base citywide.

LR-SPA 1.3—Development of Activity Center

The Master Plan Land Use Map identifies an “Activity Center” in the vicinity of the freeway and Highway 50 East. In the Mixed-Use Commercial portion of the property, an Activity Center should be integrated into the surrounding neighborhood and should incorporate a mix of complementary uses (including residential), increased densities, clear pedestrian connectivity and other transit supportive features.

While an Activity Center is not specifically identified in the new Lompa Ranch North SPA, the applicant has retained the Mixed-Use Commercial land use designation on the west side of the new north-south connector road together with General Commercial zoning to allow for a mix of commercial and residential uses in the future, should the extension of the Activity Center to this area be appropriate. Commercial uses that are allowed in the General Commercial zoning district would typically be allowed here, as would residential uses with the approval of a Special Use Permit. Residential densities may go as high as 36 units per acre in the Mixed-Use Commercial area. Additionally, the new SPA provides for a variety of pedestrian connects within and adjacent to specific land use types.

LR-SPA 1.4—Mix of Housing Types

A range of housing types shall be included in the SPA, including single-family detached, single-family attached, duplexes, multi-family residential units and housing included as part of the mixed-use development to meet varying functional and pricing needs. Single family neighborhoods shall provide a range of lot sizes.

As discussed when addressing LR-SPA 1.2 above, a variety of housing types have been proposed as a part of the new Lompa Ranch North SPA including all types listed in this policy. Densities for the single family residential have been set at a range of 3-8 units per acre as outlined in Section 2.2.1 of the new SPA.

LR-SPA 1.5—Compatibility with Existing Neighborhoods

Land use patterns and development intensity shall be designed to provide for compatibility with existing, surrounding neighborhoods, including consideration of lot sizes and development intensities adjacent to existing residential neighborhoods.

Specific land use patterns have not been established with the Lompa Ranch North SPA but generally the land use designations and zoning districts proposed have been placed adjacent to similar uses to ensure the compatibility of future development. For example, Medium and High Density Residential land use designations with corresponding zoning districts of Single Family 6,000 and Multi-Family Apartment have been proposed along Saliman Road where the land uses on the other side of Saliman Road are the same. This strategy is consistent along all of the various Lompa Ranch North SPA boundaries.

LR-SPA 2.1—Roadway Linkages

The general vehicular circulation network shall be established with the final SPA to connect neighborhood within the SPA and surrounding neighborhood and shall include, at a minimum:

- *a north-south collector between Highway 50 East and Fifth Street;*
- *connection of the north-south collector to Robinson Street;*
- *a collector from Fifth Street to Railroad Street across the Linear Park;*
- *and other roadways and connections as required by a traffic study.*

Section 3.6 of the Lompa Ranch North SPA addresses applicable roadway connections identified above. The new SPA requires a north-south collector between Highway 50 East and East 5th Street and this collector will also connect to Robinson Street. The collector from East 5th Street to Railroad Street is applicable to the south Lompa Ranch properties and is not addressed with the Lompa Ranch North SPA. Additional requirements for Saliman Road, Robinson Street, East 5th Street and Airport Road are included in the new SPA. Engineering and Transportation staff have recommended changes to the SPA document language where they feel it is appropriate.

LR-SPA 2.2—Traffic Study Requirement

A traffic study shall be required for review with the final SPA. The traffic analysis shall meet the requirements of the Carson City Development Standards and shall be conducted for the buildout of the entire SPA.

A traffic study is included in the Lompa Ranch North SPA as Appendix 2. Engineering and Transportation staff have accepted this traffic study for the overall Lompa Ranch North SPA to address estimated trip generation and traffic impacts based on very general land use designations. However, as more specific development plans come forward, the applicant will be required to submit more specific and detailed traffic studies to address each phase of development. This requirement has been outlined in recommended language changes in Section 3.6 from Engineering and Transportation staff.

LR-SPA 2.3—Pedestrian and Bicycle Connections

Pedestrian and bicycle connections shall be provided to link all internal neighborhoods to each other and all areas of the development to:

- *the linear park south of Fifth Street and along Fifth Street;*
- *any commercial, mixed use or employment areas with the SPA;*
- *the Highway 50 East multi-use path;*
- *the high school;*
- *Saliman Street;*
- *any internal trails, open space and parks provided as part of the SPA development.*

Section 3.6 of the Lompa Ranch North SPA includes language that requires all sidewalks to be designed to provide connectivity to multi-use paths, parks and open space. The Saliman Road section requires a channel section that will include open space for a multi-use path. The new north-south collector is also required to provide additional space for a multi-use path and landscaping that are separated from vehicular traffic. Engineering and Transportation staff have recommended additional language for a channel section to provide open space for a multi-use path along Robinson Street. In addition, Section 3.1.2 identifies pathways in the parks and open space areas on both the east and west side of the I-580 Freeway, and requires that the developer demonstrate trail connectivity between future projects and subdivisions as they are proposed for development.

LR-SPA 3.1—Floodplain and Drainage

The existing floodplain shall be identified based on FEMA mapping with post-freeway drainage improvements for development of the final SPA. In order to develop the property, drainage improvements will be required to mitigate the 100-year floodplain on the property. This may also require amending the FEMA mapping through a letter map amendment process. Once the new floodplain is determined, designated land use intensities shall be developed outside this floodplain area.

An overall storm water management plan shall be developed with the final SPA to ensure adequate drainage facilities to serve the entire SPA area.

A detailed wetlands delineation shall be provided with the final SPA identifying any areas that meet the Federal 404 definition of wetlands. Following wetland identification, designated land use intensities shall be developed outside the wetlands.

The applicant has incorporated the LR-SPA 3.1 – Floodplain and Drainage policy into the new Lompa Ranch North SPA. Additionally, the applicant has provided a Conceptual Drainage Study and Stormwater Management Report as Appendix 1. This report indicates that a FEMA Letter of May Revision (LOMR) should be pursued to remove much of the Lompa Ranch from the delineated floodway. Engineering staff has included a recommendation for additional language that states the LOMR must be approved by the City and submitted to FEMA prior to the submittal of the first building permit. Engineering staff further recommends that a Conditional Letter of Map Revision (CLOMR) must be approved by Carson City and FEMA prior to the issuance of the first construction permit.

Additionally, the new SPA states that a detailed wetlands delineation shall be provided by June 30, 2016 and that no development shall occur within the new SPA area until this wetlands delineation has been completed.

Finally, the new SPA outlines additional standards regarding channels, detention and retention, drainage patterns and the requirement for a more comprehensive drainage impact analysis with the first tentative map or development application, as well as updates to the master drainage analysis for multi-family and commercial projects. Engineering staff has recommended additional language regarding more detailed information about project phasing as a part of this section.

LR-SPA 4.1—Quality Design

The final SPA shall promote a variety and visual interest in the design of new residential neighborhoods through the incorporation of varied lot sizes, building styles and colors, garage orientation and other features.

The final SPA shall promote variety and visual interest in the design of new commercial centers through the incorporation of well-articulated building facades, clearly defined entrances and pedestrian connections, landscaping and other features.

The Lompa Ranch North SPA sets forth design standards that promote variety and visual interest for both the commercial and residential properties within the SPA area. The applicant has dedicated Chapter 2 in its entirety to design standards and guidelines that are intended to create a high level of quality in residential and commercial development within the SPA. In some cases the text mirrors standards already outlined in the Carson City Development Standards, but in most cases the standards are more restrictive and set forth specific architecture, landscaping and site design standards that go beyond what Carson City currently requires for commercial and residential developments. Planning staff has inserted recommended text changes where necessary but the suggested text changes are relatively minor and not substantive.

LR-SPA 5.1—Provision of Park, Multi-Use Paths and Open Space Facilities

Parks shall be provided commensurate with demand created by the SPA development consistent with the City's adopted Parks and Recreation Master Plan standards. Drainage and flood control areas may be used as part of the parks and multi-use trail system. Parks shall be connected to existing multi-use trail facilities. Parks, open space and multi-use path areas shall be generally depicted on the final SPA Land Use Plan.

Section 3.1 of the Lompa Ranch North SPA includes provisions for two parks and open space including multi-use path areas. Working with Parks and Recreation staff, the applicant has set aside an area for a 10-acre park on the west side of the I-580 Freeway and another three-acre park on the east side of the I-580 Freeway. After presenting the parks and open space portion of the new SPA to the Parks and Recreation Commission on February 2, 2016, the applicant also included a provision for dog park facilities where feasible in detention basin areas. Section 3.1 further discusses specific design standards for the parks and open space, and indicates that a Landscape Maintenance District will be formed for the maintenance of the parks and open space facilities.

LR-SPA 6.1—Extension of Public Utilities

Water, sewer, storm drainage, gas, electric, telephone and cable television utilities shall be extended to serve the entire SPA and shall be coordinated with the applicable providers to ensure such facilities can be provided for the proposed development.

In Sections 3.2 through 3.5 of the Lompa Ranch North SPA the applicant indicates that all new development will be required to connect to sewer and water, make storm drainage improvements, underground all utility lines and coordinate with utilities providers for electric, natural gas, telephone and cable services.

LR-SPA 6.2—Undergrounding of Utilities

All utilities, including electric, shall be extended underground from their present locations to serve the development.

Section 3.5 of the Lompa Ranch North SPA states that all utility services within the new SPA shall be undergrounded and that overhead power lines shall be prohibited.

LR-SPA 6.3—School Facilities

The applicant shall work with the Carson City School District to establish adequate school sites and facilities, as necessary, to provide for adequate levels of service for the proposed development.

Section 3.10 of the Lompa Ranch North SPA provides for standards that have been developed with the assistance of the Carson City School District and include reserving a 10-acre elementary school site within the SPA area for future enrollment needs.

LR-SPA 7.1—Adequate Public Safety Facilities

Adequate police and fire protection needs to be established within the SPA. Police and fire protection at an urban level of service needs to be demonstrated. Any additional services or facilities necessary to provide this level of service should be established on a prorated basis to serve the entire SPA.

Section 3.9 of the new SPA sets forth provisions for the Sheriff's office to review proposed development plans and condition projects to implement or incorporate crime prevention measures when necessary. Fire protection is discussed separately in Section 3.8 and is addressed by staff in the next section of this staff report.

LR-SPA 7.2—Fire Station Location

The applicant shall work with the Carson City Fire Department to identify potential fire station locations, including off-site locations in the vicinity, to adequately serve the proposed SPA development area.

In order to provide for adequate fire protection to serve the Lompa Ranch North SPA area, the applicant has worked with the Fire Department to implement an impact fee for all residential and commercial development within the SPA, rather than setting land aside within the new SPA area for a fire station location. This is discussed in detail in the proposed revisions to Section 3.8 of the SPA document and states all development will be subject to an impact fee to assist with the funding of a new fire station in the vicinity. This impact fee is proposed to be set at \$1,000 per residential dwelling unit and \$1,000 per 1,000 square feet of commercial space.

PUBLIC COMMENTS: Public notices were mailed to 277 adjacent property owners within 300 feet of the subject parcels in accordance with the provisions of NRS and CCMC 18.02.045 on February 5, 2016. At the time of the writing of this report, staff has received formal comments via phone call from one adjacent property owner as summarized below:

- February 16, 2016 phone call with Sonia Diaz of 2720 W. Modoc: Opposed to apartment zoning next to her property. Chose the south side of her condominium complex because it is quieter and faces open area rather than the north side next to existing apartments where there is more traffic and activity.

Any comments that are received after this report is completed will be submitted prior to or at the Planning Commission meeting, depending on their submittal date to the Planning Division.

OTHER CITY DEPARTMENT OR OUTSIDE AGENCY COMMENTS:

All comments and revisions received by city departments have been incorporated through track changes in the Lompa Ranch North SPA document included with this staff report.

FINDINGS: Staff recommends the following findings for approval of the Master Plan Amendment pursuant to the Carson City Municipal Code Section 18.02.070, Master Plan and 18.02.075, Zoning Map Amendments and Zoning Code Amendments.

Master Plan Amendment Findings

1. ***The proposed amendment is in substantial compliance with the goals, policies and action programs of the Master Plan.***

As discussed in detail in the Discussion section in this staff report, the proposed amendment to adopt the new Lompa Ranch North SPA meets the goals and policies set forth in the original Lompa Ranch SPA.

2. ***The proposed amendment will provide for land uses compatible with existing adjacent land uses and will not have detrimental impacts to other properties in the vicinity.***

The proposed amendment provides for land uses that are compatible with existing adjacent land uses by creating the same or similar land use designations and zoning districts adjacent to existing land uses. The proposed amendment also meets the intent of the original Lompa Ranch SPA by providing a mix of complementary land uses within the new Lompa Ranch North SPA area. It is not anticipated that the proposed amendment will be detrimental to other properties in the vicinity.

3. ***The proposed amendment is in response to changed conditions that have occurred since the plan was adopted and the requested amendment represents a more desirable use of land.***

It has been long anticipated that development would ultimately occur on the Lompa Ranch. The 2006 Carson City Master Plan adopted a SPA for the Lompa Ranch area that outlined, in general terms, desired land use designations and policies for future development. A requirement of the original Lompa Ranch SPA was to create and adopt a new SPA for the area to address development once it became evident. The proposed amendment is in response to development plans that represent desired use of the land as set forth in the original Lompa Ranch SPA.

4. ***The requested amendment will promote the desired pattern of orderly physical growth and guides development based on the projected population growth with the least amount of natural resource impairment and the efficient expenditure of funds for public services.***

The requested amendment creates a new SPA for the Lompa Ranch properties on the north side of East 5th Street. It provides development policies and design standards that promote desired growth patterns and quality development for the area as envisioned with the 2006 adoption of the original Lompa Ranch SPA.

Zoning Map Amendment Findings

1. ***The proposed amendment is in substantial compliance with and supports the goals and policies of the Master Plan.***

The original Lompa Ranch SPA states in Policy LR-SPA 1.1 – Specific Plan Area Requirement, that appropriate zoning of the property may be included as part of the SPA process. The applicant is proposing a Zoning Map Amendment in conjunction with the adoption of the Lompa Ranch North SPA that will make the underlying zoning of the properties consistent with the land use designations proposed with the new SPA, and will support the goals and policies set forth in the new SPA.

2. ***That the proposed amendment will provide for land uses compatible with existing adjacent land uses and will not have detrimental impacts to other properties in the vicinity.***

The proposed Zoning Map Amendment will change the zoning of the Lompa Ranch North SPA properties to zoning districts that are compatible with existing adjacent land uses by providing the same or similar zoning districts adjacent to those existing land uses surrounding the SPA area.

3. ***That the proposed amendment will not negatively impact existing or planned public services or facilities and will not adversely impact the public health, safety and welfare.***

The proposed Zoning Map Amendment is consistent with the proposed land use designations in the new Lompa Ranch North SPA and is appropriately proposed for adoption at the same time as the new SPA. Provisions have been set forth in the policies and development standards of the new SPA to ensure that public services and facilities are adequately planned for and will not adversely impact the public health, safety and welfare.

Lompa Ranch North Specific Plan

1. Introduction

1.1 Location

The Lompa Ranch North Specific Plan Area encompasses 251.31± acres. The majority of land (203.27±) acres is located on the west side of Interstate 580, north of East Fifth Street, east of Saliman Road, and south of US Highway 50 (East William Street). The remaining 48.04± acres is located on the east side of Interstate 580 along the western side of Airport Road. Figure 1 (below) depicts the Lompa Ranch North in context with the surrounding area.

Lompa Ranch North Specific Plan

Figure 1 – Lompa Ranch North Specific Plan Area

1.2 Purpose

The purpose of this Development Handbook is to provide for the orderly development of the Lompa Ranch North Specific Plan Area (SPA) as envisioned, while assuring that the stated desired level of quality is achieved. Since implementation of public and private improvements will occur in multiple phases, over many years, the standards and guidelines contained herein establish a common framework to guide individual improvement plans. The development of the property is controlled and restricted by these development requirements as well as by all applicable government codes and regulations. This Development Handbook is not intended to limit creativity or prevent variation necessary to respond to unique site conditions, but rather to generate consistency and quality throughout the SPA.

This SPA is for the Lompa Ranch North properties specifically identified with this document. Future development of the remaining Lompa Ranch properties as identified in the 2006 Carson City Master Plan shall be required to receive approval of a new SPA for those areas prior to development.

1.3 Vision

The Lompa Ranch North SPA is intended to provide for a sustainable community that includes a range of land uses that complement not only each other but those that currently exist outside of the SPA boundaries. The vision is to provide for a viable community that promotes a variety of housing types supported by well-balanced commercial, recreational, and educational opportunities.

Complementing the commercial uses and neighborhoods within Lompa Ranch North will be a linear open space preserve along Interstate 580 as well as a network of trails and sidewalks throughout the community, providing non-vehicular connectivity to the various internal and regional components of the area. Throughout Lompa Ranch North, consistent design themes, entries, and landscape treatments will establish a sense of place/community and recall the property's ranching roots.

1.3.1 Land Use Pattern

The land use mix within Lompa Ranch North provides for varying levels of compatible densities and intensities that will result in a synergy that attracts both residents and businesses. This supports walkability within the community to commercial, recreational, employment, and public activities. It also minimizes the

Lompa Ranch North Specific Plan

consumption of land associated with traditional suburban development by encouraging and creating a more compact development pattern that is efficient for infrastructure, public services and maintenance.

1.3.2 Sense of Place and Community

Creating a sense of place is one of the key components in creating a vibrant and balanced community. A sense of place is fostered within Lompa Ranch North by creating human-scale environments in which the individual can feel both comfortable and safe. This includes provisions for open space and walking paths, neighborhood parks, common design themes, and uses that complement each other. Furthermore, the Lompa Ranch North SPA promotes and provides for connectivity between various neighborhoods and uses that are integrated through the standards included within this handbook.

1.3.3 Diverse Housing

Mix

The Lompa Ranch North SPA provides for neighborhood diversity by allowing for a mix of residential densities and product

types to support a wide range of resident interests and needs. The densities included in the SPA will also support and complement planned commercial uses within the Lompa Ranch North plan area. Furthermore, this diversity in densities and housing types serves to break up the monotony of traditional residential development by reinforcing the dynamics of character and identity within each of the neighborhoods.

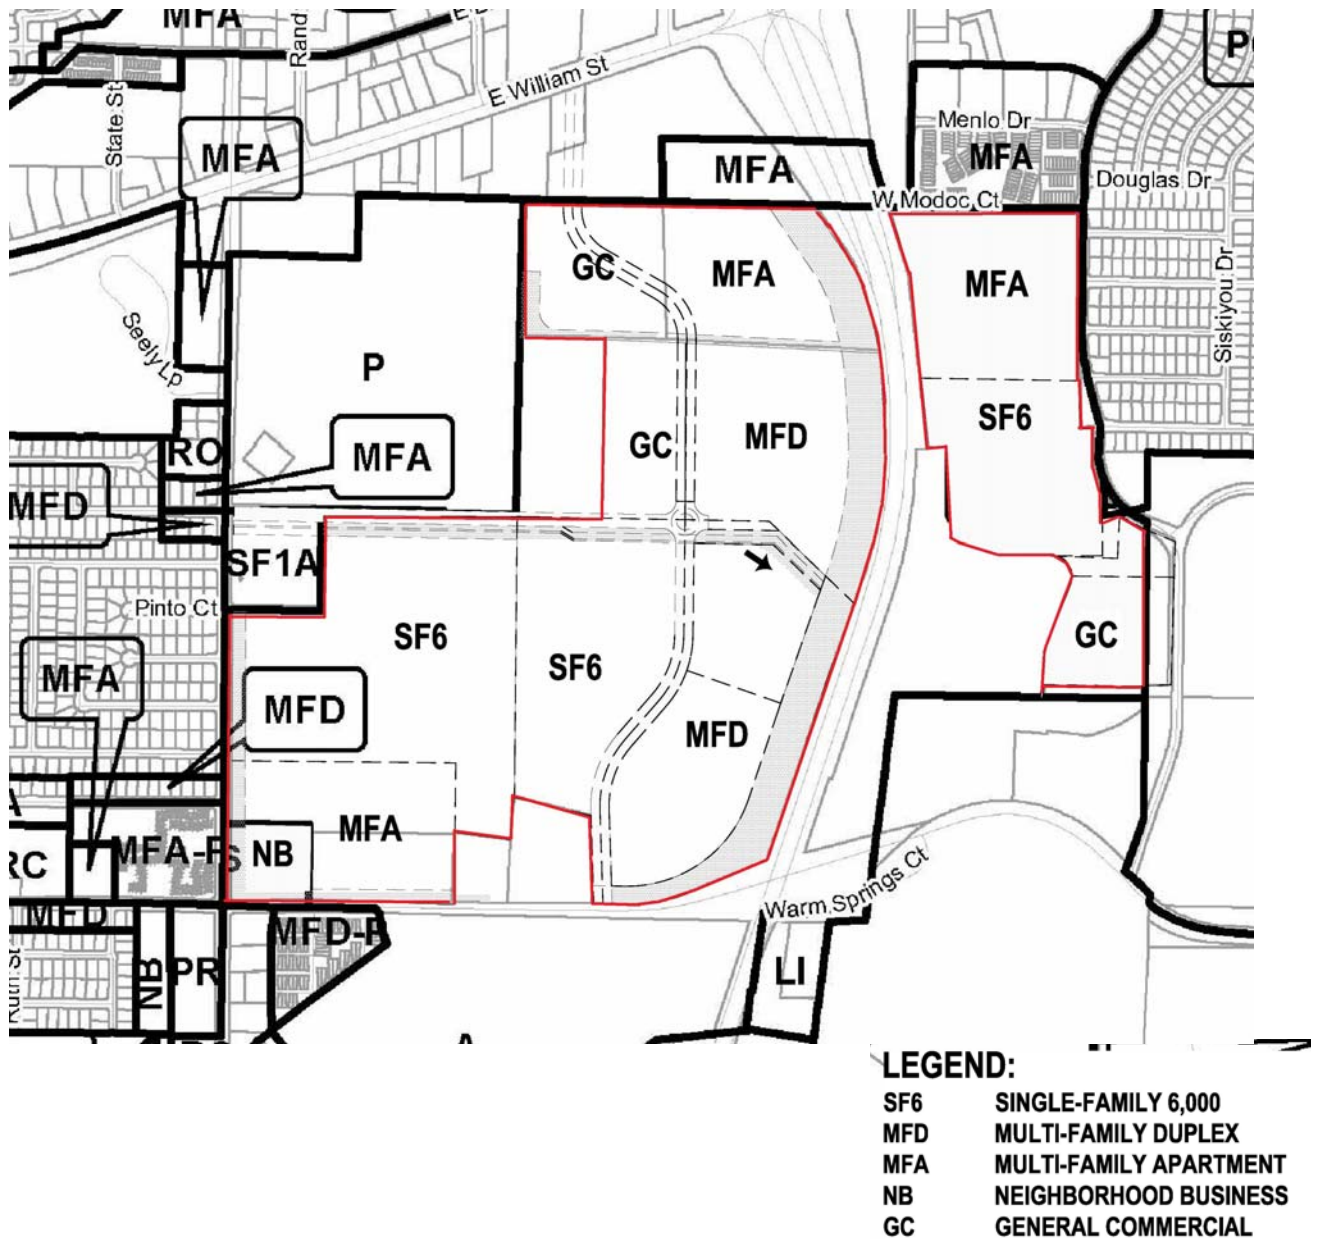

1.3.4 Implementation

This handbook will be used by the Carson City Community Development Department as a guide for reviewing individual projects within the boundaries of the Lompa Ranch North SPA.

Lompa Ranch North Specific Plan

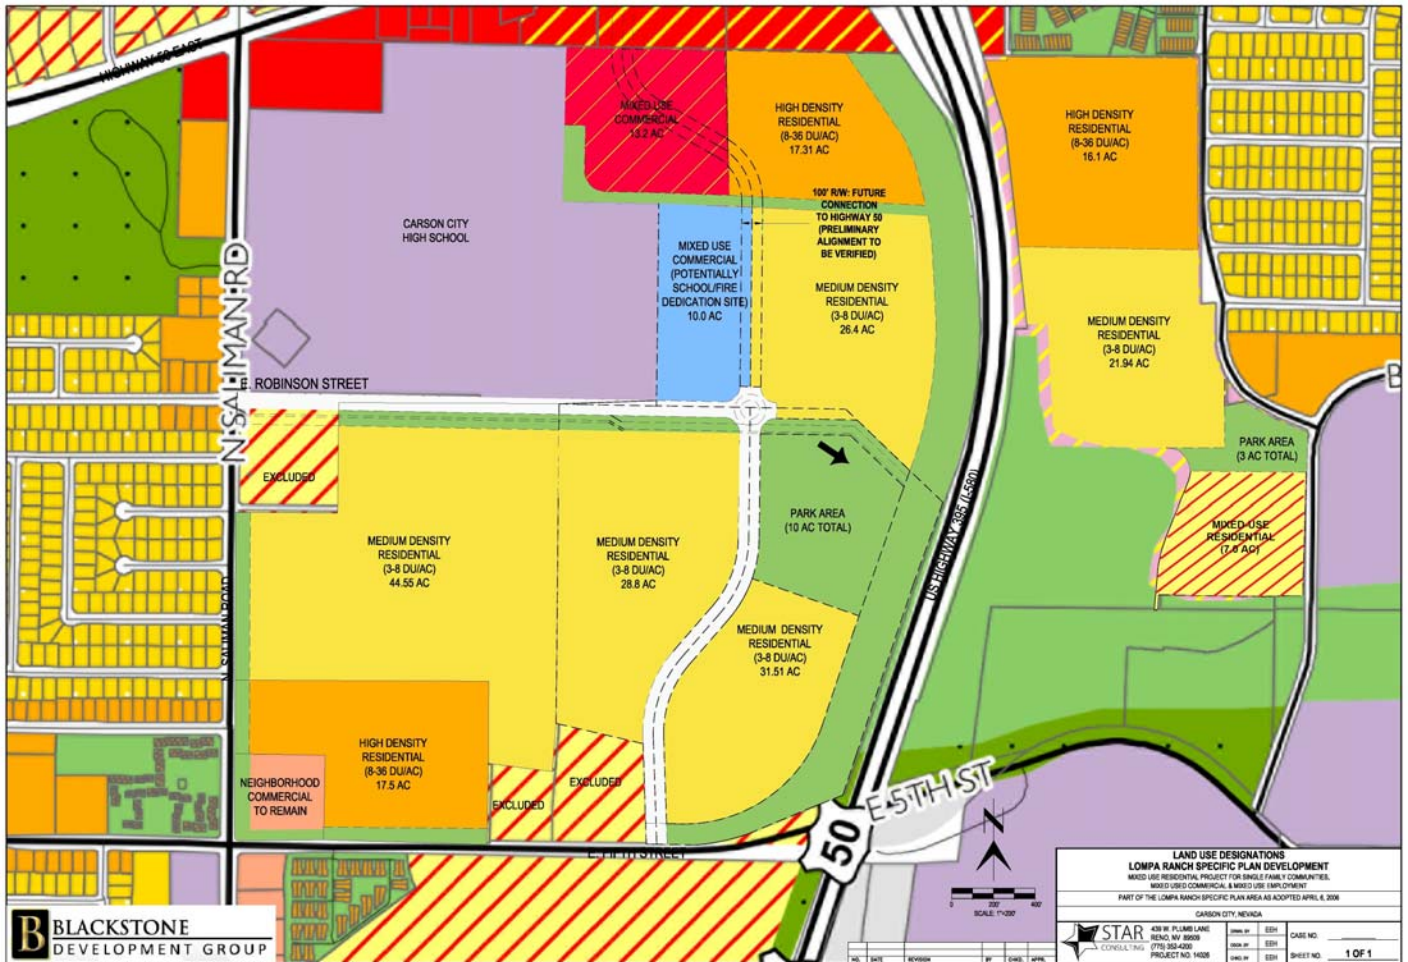

1.4 Allowed Uses

Allowed uses within the Lompa Ranch North SPA shall be determined based on the underlying zoning categories, as included in the Carson City Municipal Code Title 18. The zoning districts included within Lompa Ranch North are depicted below:

Lompa Ranch North Specific Plan

Master Plan land use designations for the Lompa Ranch North SPA are included below:

1.4.1 General Standards

- The Lompa Ranch North SPA is envisioned to include a mix of residential uses ranging from 4 units per acre up to 36 units per acre.
- Land use is determined based on zoning. Zoning adopted with this Specific Plan shall be reviewed and approved by the Carson City Planning Commission and Board of Supervisors and deemed to be appropriate for the site(s).

Lompa Ranch North Specific Plan

- c) Commercial uses at a varying range of intensities are encouraged within the SPA to serve both new residents of Lompa Ranch North as well as those within the surrounding area. Commercial uses shall be located as to properly relate to adjoining uses.
- d) Uses within Lompa Ranch North shall conform to the underlying zoning district(s) assigned to the individual parcels as outlined in Title 18 of the Carson City Municipal Code
- e) Supplemental review required for specific uses within zoning categories such as Special Use Permits shall remain in effect per the Carson City Municipal Code (refer to allowed uses within individual zoning categories).
- f) This Specific Plan shall not grant any special privileges or waivers in terms of public review or entitlements otherwise required under the Carson City Municipal code in terms of allowed uses or supplemental review.

Lompa Ranch North Specific Plan

2 Standards and Guidelines

The site planning standards and guidelines address general provisions of site development which include building orientation, grading and drainage, parking areas, landscape, lighting, signs, walls and fences, and service areas. Site planning controls the proper placement of buildings and internal roads that service and access the various land uses in the community. It addresses the linkages and land use relationships at a human-scale, in order to create a stimulating and visually pleasant community. The goal is to promote pedestrian activity and safety, create visual compatibility with surrounding neighborhoods and minimize negative impacts on the natural environment. **These standards are intended to be used in addition to the standards outlined in the Carson City Municipal Code, Title 18 Appendix - Development Standards. In cases where a conflict exists, the stricter of the standards shall apply. Where these standards are silent, the Carson City Development Standards shall apply.**

2.1 Commercial Uses

2.1.1 Commercial Site Planning Standards

- a) Building placement and orientation shall be designed to create visual interest along public streets. Multiple buildings in a single project shall demonstrate a positive functional relationship to one another.
- b) To the extent possible, buildings located within a single project shall be clustered. Plazas and pedestrian areas shall also be an important element in the design of clustered buildings. When clustering is impractical, a visual link should be established between buildings through the use of architectural features, landscaping, etc.
- c) For general commercial uses, a minimum of 15 percent of the building area should be located at or near the front setback line. This minimizes large, continuous areas of parking and encourages active streetscapes.
- d) Buildings shall be oriented so that public access or windows face adjoining streets.
- e) Plazas or common areas within a project shall be located near building entrances or areas of high pedestrian traffic to ensure their use.
- f) To the extent possible, areas between buildings shall be utilized for plazas, outdoor seating, or landscape

Lompa Ranch North Specific Plan

features in order to eliminate “dead zones” of underutilized space.

g) Bicycle racks shall be provided within all commercial centers.

2.1.2 Commercial Grading and Drainage

a) Design of commercial uses shall be sensitive to the natural terrain, and structures should be located to minimize necessary grading and preserve natural site features such as drainageways, wetlands, etc. Grading of commercial sites should blend with the natural topography of the site.

b) Grading within commercial areas shall be designed to complement the architectural and landscape design character of the center and surrounding area. Grading techniques can be used to screen parking and service areas, reduce the perception of height and mass on larger buildings, and provide reasonable transitions between uses.

c) Graded slopes should properly transition to existing natural terrain at project borders.

d) Man-made slopes shall not exceed an average of 3:1 slope and turf areas shall not exceed an average 4:1 slope.

e) Areas disturbed by grading activities shall be revegetated prior to the issuance of a certificate of occupancy. If climatic conditions or other circumstances prevent planting at the time of occupancy, a bond shall be provided for landscaping during the subsequent growing season. Drought tolerant plant species shall be utilized to help minimize erosion.

f) New commercial developments must include a final hydrology report to be reviewed and approved by the Carson City Engineering Department prior to the issuance of a building permit.

g) An erosion control plan shall be included with each grading permit.

Appendix 1 contains the Conceptual Drainage Study and Stormwater Management Report for Lompa Ranch North.

Lompa Ranch North Specific Plan

2.1.3 Commercial Parking Lots

a) A minimum of 10 feet of landscaping shall be provided between parking lots and the public streets.

b) A minimum 400 square foot interior planter shall be provided at the end of parking aisles (refer to example to the right). Planters shall include a minimum of one deciduous tree (min. ~~1"~~ **two inch** caliper) – see example to right.

c) Landscape islands (minimum of 400 square feet) shall be provided for every 10 spaces in large parking fields and shall include a minimum of one **deciduous** tree (~~1-inch~~ **two inch** caliper minimum). See example to right.

d) Pedestrian connections between parking lots and buildings shall be provided along with connections to sidewalks along adjoining public streets.

e) **Parking should be located to the side and rear of a project site where feasible. However, [N]no more than 10 percent of the required parking shall be in the rear service area (typically not used for general public access) of a project site.**

f) Parking areas shall be screened from adjoining residential areas through the use of landscaping and berming. This buffer shall be a minimum of 10 feet in width (see example to right).

g) Commercial centers that include tenants that utilize shopping carts shall provide a “cart corral” within 150 feet of 85 percent of their parking stalls.

h) For commercial centers exceeding 5 acres, a maintenance plan shall be required for parking lots that includes regular sweeping and a snow removal/storage plan for winter weather events.

Lompa Ranch North Specific Plan

- i) For commercial centers adjoining residential areas, parking lot sweeping shall be limited to the hours between 8:00 am and 9:00 pm.
- j) Parking lot design, including space dimensions, aisle widths, etc. shall comply with the provisions of the Carson City Municipal Code.
- k) Outdoor sales or special events may not reduce parking past minimum requirements mandated in the Carson City Municipal Code.

2.1.4 Commercial Landscaping

- a) Landscaping, including plant materials and themes shall be consistent throughout the Lompa Ranch North SPA.
- b) Landscaping standards contained in the Carson City ~~[Municipal Code]~~ **Development Standards** shall apply within Lompa Ranch North. ~~[Where a conflict exists between these standards and the Municipal Code, the stricter of the standards shall apply.]~~
- c) Within commercial centers, areas not utilized for parking, buildings, plazas, or access/circulation shall be landscaped to the back of curb. Unbuilt pad areas shall be excluded from this standard.
- d) Drought tolerant plantings shall be used in conjunction with low water demand principles and techniques.
- e) All landscaped areas shall be irrigated with permanent automatic irrigation systems. All irrigation systems shall be placed underground.
- f) Landscape maintenance within commercial areas shall be the responsibility of individual property owners or completed through a private maintenance association.
- g) Landscaping along adjoining rights-of-way shall be a minimum width of 15 feet and provide a mix of trees, shrubs, and living groundcover. Trees shall be provided at a rate of 1 tree per 25 lineal feet of street frontage with a minimum of six shrubs per tree.**

Lompa Ranch North Specific Plan

2.1.5 Commercial Lighting

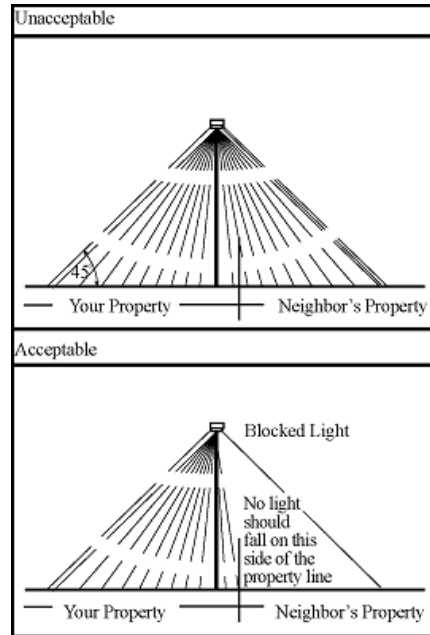

a) Adequate lighting shall be provided to ensure a safe pedestrian environment.

b) Parking lot lighting [~~adjacent to~~] **within 75 feet of** residential areas shall be limited to [15] **12** feet in height and shall incorporate shielded fixtures. **Additional height limitations for parking lot lighting within certain distances of residential areas are identified in the Carson City Development Standards.**

c) Parking lot lighting shall use shielded/directed fixtures to ensure that spill-over and glare do not occur on adjoining properties. See example to right.

d) The use of bollard lighting is encouraged in pedestrian areas.

e) Exterior lighting shall be used for purposes of illumination and safety only, and shall not be designed for, or used as, an advertising display.

2.1.6 Commercial Signs

Signs and their integration into the project is a critical element in the design of Lompa Ranch North. Careful use of forms, styles, materials, and colors will establish continuity throughout the community. Signs are intended to be utilized only where necessary, and in an understated manner, emphasizing an image of permanence and quality.

a) Signs shall be included on facades or entry canopies of buildings and illuminated or backlit with indirect lighting. All tenant identification signs shall be consistently located and integrated into the architectural design of the building entry. Storefront signs shall be proportional with the building architecture (see example to right).

Lompa Ranch North Specific Plan

b) Flashing or animated signs are prohibited.

c) Building signs that project more than 4 inches beyond the wall façade are prohibited, unless incorporated as an architectural element.

d) Hanging signs may be included under eaves above walkways and shall maintain a minimum of 8 feet of clearance. These signs shall be architecturally compatible with the building they serve (see example to right).

2.1.7 Commercial Fencing

a) Walls and fences shall be utilized to provide a buffer between incompatible uses. It is important, however, that walls are appropriately integrated into each project

b) Solid fencing (6 foot minimum) shall be installed between commercial uses within Lompa Ranch North and adjoining residential uses. This can include wood or vinyl fencing, concrete block walls, pre-cast wall systems, or similar.

c) Chain link fencing shall be prohibited within commercial centers.

2.1.8 Commercial Trash and Utility Areas

a) Service~~[-]~~ **and** maintenance ~~[and storage]~~ areas shall be screened from adjacent public right-of-ways, pedestrian plazas or adjacent residential uses with landscaped berms, walls or plantings. **Storage areas shall be enclosed by a 100% site obscuring fence or wall, permanently installed and maintained at a minimum height of six feet.**

b) All trash and garbage bins shall be stored in an enclosure that includes solid screening, to the approval of the Carson City Community Development Department.

Lompa Ranch North Specific Plan

c) Trash enclosures shall incorporate building materials, colors, etc. that are complementary to the overall project architecture. Gates shall be constructed of durable building materials that screens at a minimum 80% of the view into the trash enclosure. Wood or chain link gates are not allowed (see example to left).

d) Trash enclosures must include provisions for concrete pads or appropriately designed asphalt sections in front of the enclosure. The area in front of the trash enclosure shall be a minimum of six (6) feet to reduce pavement damage from disposal trucks.

2.2 Single Family Residential Areas

2.2.1 Neighborhood Diversity

Single family areas within the Lompa Ranch North SPA will include varied densities and housing types in order to create separate and distinct neighborhoods within the project. This can be accomplished through the use of varied housing types, distinct architectural styles and elements, etc.

a) Densities within single family areas will range from 3 to 8 dwelling units per acre.

b) Neighborhood density shall properly relate to adjoining developed areas and provide for transition between neighborhood types. Proper transitions can include feathering of density/lot size, landscape buffers, or walls/fences that serve to identify community boundaries.

c) Individual single family projects within the SPA boundary may create their own sense of identity through

the use of entry features that include distinctive signage, entry treatments, landscape improvements, water features, etc.

d) Varied densities are encouraged throughout the SPA boundary to encourage varied product types including single family detached homes, patio homes, duplexes, townhouses, etc.

Additionally, new urbanism design principles such as house-forward designs with residential alleyways are

Lompa Ranch North Specific Plan

permitted within the single family areas.

e) It is the intent of the SPA to provide a number of distinctly different neighborhood types rather than a single “large neighborhood” with a single product type.

f) Variation in architectural styles is encouraged throughout the SPA in order to provide distinct neighborhood identity to new subdivisions within the Lompa Ranch North.

Lompa Ranch North Specific Plan

2.2.2 Single Family Neighborhood Design

Neighborhoods within Lompa Ranch North will promote quality development that is complementary to the existing built environment, while establishing its own sense of identity through uniform and innovative design. A variety of single family detached, as well as single family attached products are anticipated within the SPA boundary.

a) To the extent possible, “forward” architecture shall be used in the design of homes. This is accomplished by placing entries, windows, front porches, and living areas towards the street on most plan variations.

b) With the exception of zero lot line lots, plans should be reversed and plotted so that garages and entries are adjacent to each other. This creates an undulating sense of setback. Occasionally this pattern should be broken so that it will not become overly repetitious or reflected by the massing across the street.

c) The garage shall not be the dominant feature of the building facade facing the street and should be offset through architectural detailing for garage forward elevations.

d) So as not to contribute to a repetitious and monotonous appearance along the street, the use of varying building setbacks from the street right-of-way is encouraged.

e) Neighborhoods shall provide connections into the community trail system.

g) In order to avoid a “walled-in” feel, homes backing to parks, open space, or drainage corridors shall include open rear fencing. This includes the use of split rail or iron fencing. See example to right.

h) Setbacks for single family residential areas shall comply with the underlying zoning district for which the subdivision is located. In order to provide for visual interest within the streetscape, front setbacks may be reduced up to 5 feet in order to achieve a non-monotonous/repetitive streetscape pattern.

Lompa Ranch North Specific Plan

2.2.3 Single Family Grading

- a) The design of residential neighborhoods shall be sensitive to the natural terrain, and structures shall be located in such a manner so as to minimize necessary grading and preserve natural site features and drainage ways. Any grading of the site terrain shall blend with the natural topography of the site.
- c) Graded slopes shall be rounded resulting in smooth, harmonious transitions between the man-made terrain and the natural terrain.
- d) All graded slopes shall be revegetated prior to building occupancy. If climatic conditions or other circumstances prevent planting at the time of occupancy a bond shall be provided for landscaping during the subsequent growing season or other arrangements made for revegetation, subject to the approval of the administrator. Drought tolerant plant species shall be utilized to help minimize erosion.

2.2.4 Single Family Landscaping

- a) Front **and street side** yard landscaping shall be installed by the builder prior to the occupancy of the individual home. See example to right.
- b) Front yard landscape packages shall provide for a minimum of 1 tree per 50 lineal feet of street frontage as well as a minimum of 12 shrubs. Trees shall be a minimum of 1 inch caliper for deciduous and 6 feet **in height** for evergreens. Shrubs shall be a minimum of 2 gallon.
- c) Xeriscape options for front yards shall be permitted. Xeriscape packages must include the required trees and shrubs outlined under the previous standard.

- c) Front yard landscaping is required for all homes and will be reviewed and approved with the tentative map establishing installation timing.
- d) Front yard landscape packages shall include an automatic irrigation systems.

Lompa Ranch North Specific Plan

2.2.5 Single Family Lighting

- a) Lighting shall be designed to differentiate land use areas, emphasize community amenities, provide continuity along street corridors and ensure the safety of residents and users.
- b) Exterior lighting shall be shielded from projection offsite and designed to be compatible with the architectural and landscape design of the home.

2.2.6 Single Family Walls and Fencing

- a) Walls may be used where necessary to provide privacy and security for residential neighborhoods when adjacent to arterial or collector roadways, or when adjoining non-residential uses.
- b) Walls within the community shall not become the dominant visual element and walls where needed shall blend into the overall landscape.
- c) Walls within Lompa Ranch North shall not exceed 6 feet in height. Acceptable materials include stone, stone veneer, split face/precision block, slump stone, and stuccoed CMU.
- d) Open fencing shall be used where the rear of individual lots are adjacent to open space. See examples below.
- e) Open fences at rear yards may include landscaping with trees and shrubs to screen views of private yards from adjacent properties, common areas, and/or roadways.
- f) Acceptable open fencing materials include wood or vinyl split-rail or wrought iron. See examples below.

Lompa Ranch North Specific Plan

g) Single family residential lots may include solid privacy fences. Acceptable materials include wood and vinyl. Privacy fencing shall not exceed 6 feet in height.

h) Chain link fencing is prohibited within residential areas.

2.3 Multi-Family Residential Site Planning

2.3.1 Multi-Family Building Orientation

a) Multi-family structures should be grouped in clusters of buildings rather than one large continuous structure in order to minimize the scale of the project.

b) Open space areas and courtyards shall be created within multi-family developments in order to break up building mass and provide recreational opportunities. See example to left. Open space/recreational areas shall be provided per the requirements of the Carson City Municipal Code.

c) To provide privacy between living spaces, there should be distance separations, buffering or changes in the angles of units. See examples below.

Lompa Ranch North Specific Plan

d) All multi-family/attached single family developments shall incorporate pedestrian connections to adjoining residential, recreational and commercial uses as well as to the community trail system (where practical).

e) Multi-family/attached single family projects in excess of 35 units shall provide a secure children's play area. Additionally, such projects shall incorporate a minimum of 5 recreational facilities. These can be any 5 of the following:

- Swimming pool
- Tennis courts
- Horseshoe Pits
- Spa
- Fitness Center/Gym
- Game room
- Community room
- Picnic areas to include tables with barbecues
- Volleyball court
- Basketball court

f) Recreation facilities shall be conveniently and centrally located for the majority of the units (see examples to right).

g) Private open space, such as decks or patios, shall be contiguous to the units with a minimum width of six (6) feet.

h) Setbacks shall conform to the underlying base zoning. Deviations to setbacks within 10% of requirements may be granted by the Carson City Community Development Director or his/her designee.

2.3.2 Multi-Family Grading and Drainage

a) The design of multi-family housing or attached single family housing shall be sensitive to the natural terrain, and structures shall be located in such as manner so as to minimize necessary grading and preserve natural site features and drainage ways. Any grading of the site terrain shall blend with the natural topography of the site.

Lompa Ranch North Specific Plan

- b) Site grading shall be designed to complement the architectural and landscape design character of the community, screening parking and service areas, reducing the perception of height and mass on larger buildings, and providing reasonable transitions between on-site uses.
- c) Graded slopes shall be rounded resulting in smooth, harmonious transitions between the man-made terrain and the natural terrain.
- d) All graded slopes shall be revegetated prior to building occupancy. If climatic conditions or other circumstances prevent planting at the time of occupancy a bond shall be provided for landscaping during the subsequent growing season or other arrangements made for revegetation, subject to the approval of the administrator. Drought tolerant plant species shall be utilized to help minimize erosion.

Appendix 1 contains the Conceptual Drainage Study and Stormwater Management Report for Lompa Ranch North.

2.3.3 Multi-Family Parking

- a) Parking areas shall not be located in excess of 400 feet from individual units within multi-family projects.
- b) Pedestrian links between units (i.e. sidewalks) shall be provided between all units and parking areas.
- c) Garages and covered parking shall be designed as an integral part of the architecture of the development and shall include the same colors, materials, etc. as the primary building(s). Carports should not have roof pitch of less than 3:12.

2.3.4 Multi-Family Landscaping

- a) Minimum landscape requirements shall be established by the Carson City [~~Municipal Code~~] **Development Standards** based on underlying zoning of the project site.
- b) Drought tolerant and low water demand plantings shall be used to the extent possible. Xeriscaping may be substituted for turf areas and must contain trees and shrubs per the standards of the Carson City [~~Municipal Code~~] **Development Standards**.
- c) Automatic irrigation systems shall be installed with all multi-family projects. All irrigation systems shall be placed underground.

Lompa Ranch North Specific Plan

d) Large parking lots (in excess of 25 spaces) within multi-family shall provide a minimum 400 square foot landscape island containing at least one tree ([1"] **two inch** caliper) for every 10 spaces of required parking.

e) Landscaping along adjoining rights-of-way shall be a minimum width of 15 feet and provide a mix of trees, shrubs, and living groundcover. Trees shall be provided at a rate of 1 tree per 25 lineal feet of street frontage with a minimum of [4] **six** shrubs per tree.

2.3.5 Multi-Family Lighting

a) The height of lighting within multi-family projects shall be in scale with the setting and complement the architecture. Light fixtures over 10 feet shall include a cut-off shield to prevent the light source from being directly visible from off-site areas.

b) Light sources shall be kept as low to the ground as possible while ensuring safe and functional levels of illumination. For example, the use of bollard lighting rather than pole lighting is required in pedestrian areas. See examples below.

c) Illumination of landscape features or building facades for aesthetic purposes shall ensure that light does not project beyond the project boundary.

2.3.6 Multi-Family Walls and Fencing

a) Multi-family projects that adjoin common areas, open space, or drainageways shall include open fencing adjacent to such features. Acceptable materials include wood or vinyl split rail or wrought iron and shall not exceed 6 feet in height.

Lompa Ranch North Specific Plan

b) In areas where open fencing is employed, landscaping shall be used to screen views of private yards from adjacent properties and public streets.

c) Design of all walls and fences shall be consistent in terms of material, color and detail within each multi-family and attached single family residential project. **Chain link fencing is prohibited.**

d) In areas where multi-family development adjoins either single family residential or commercial use, a minimum 6-foot wall shall be provided for separation. Acceptable materials include stone, stone veneer, split face/precision block, slump stone, and stuccoed CMU.

2.3.7 Multi-Family Service and Utility Areas

a) Enclosures shall be provided in order to screen all trash dumpsters and shall architecturally complement the primary building(s). Enclosures shall include solid gates and screen a minimum of 80% of the interior area. See example to right

b) Trash enclosures shall include durable materials that complement the primary architecture and shall be screened with landscape on three sides **and shall comply with the Carson City Development Standards.** **Chain link fencing is prohibited.** See example to right.

c) The use of individual trash cans for multi-family projects in excess of 15 units shall be prohibited.

2.4 ARCHITECTURE STANDARDS AND GUIDELINES

2.4.1 Architectural Theme

It is the intent of the Lompa Ranch North SPA to promote a high quality development that incorporates an architectural style that reflect the historical ranching aspect of the area. Therefore, a ranch and craftsman architectural theme is adopted with the Lompa Ranch North SPA.

Variations on the ranch/craftsman style are encouraged in order to promote creative design, innovative features, and high quality elevations. Variations may include the introduction of a southwestern elements such as barrel tile roofs or Victorian elements such as wrap-around porches. These deviations will be

Lompa Ranch North Specific Plan

complementary to the overall theme and can add visual interest within the community.

Lompa Ranch North Specific Plan

2.4.2 Residential Architectural Elements

a) New structures within Lompa Ranch North shall, at a minimum, incorporate a minimum of two of the following elements:

- Gable roofs with deep overhangs.
- Exposed rafters, brackets, columns, etc.
- Decorative doors and windows
- A mixture of 2 (at a minimum) exterior elements including stucco, wood siding or shingles, brick, or stone
- Exterior porches or courtyards

b) Acceptable roofing materials include concrete or clay tile, slate, or architectural grade (30+ year) composition asphalt shingles. Metal roofing may be used as an architectural element in conjunction with the previously listed materials.

c) Flat roofs are prohibited in residential areas.

d) Metal buildings, other than accessory sheds not to exceed 250 square feet, are prohibited.

e) Modular homes are not permitted within the Lompa Ranch North SPA.

f) Building articulation shall include a minimum of 4 separate roof planes incorporated on front/primary elevations. Front/primary elevations shall contain a minimum of 2 wall planes offset by a minimum of 3 feet.

g) Building colors shall utilize an earth tone pallet such as browns, tans, whites, greens, deep reds and oranges, pale yellows, etc. The use of bright or vibrant colors is prohibited with the exception of highlighting architectural elements.

2.4.3 Commercial Architecture

Commercial areas within the Lompa Ranch North SPA are envisioned to complement residential uses in function and form. Smaller retail uses will incorporate the ranch theme while larger commercial centers can take a more traditional center approach with the inclusion of the ranch theme elements such as rock, stone, brick, etc.

Lompa Ranch North Specific Plan

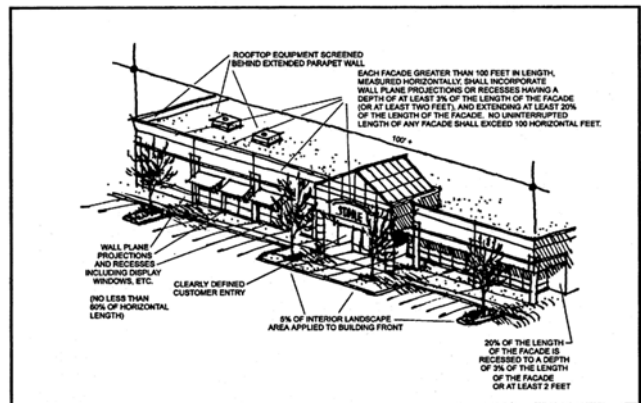

2.4.4 Commercial and School Building Mass and Form

- a) Individual buildings, forms, and components within commercial centers shall be designed as a whole to ensure unity to the overall design of the center.
- b) Facades shall include articulation to ensure that the large scale of commercial buildings is softened and appropriate for the area at a human scale. **Articulation shall be provided on all sides of any commercial building that is adjacent to a public right-of-way or main commercial parking area.**
- c) Visual interest shall be created in building facades through the incorporation of wall plane projections or recesses that are a minimum of two (2) feet in depth.
- d) Wall plane projection or recess may be substituted with a combination of vertical or horizontal elements such as trellises, awnings, shed roofs, or columns. Any such element must have a minimum of 2 feet change in vertical or horizontal projection or recess. The proposed alternative design solution shall meet the intent of this standard.
- e) In commercial areas adjoining residential uses, building heights shall relate to the adjacent development to enhance view corridors and ensure compatibility.

example to the left).

- f) Multi-tenant commercial spaces shall use color change, texture change, material change, or relief change to avoid large expanses of blank walls and box-like structures (see

- g) Buildings in excess of 10,000 square feet should vary building and roof forms to give the appearance of smaller forms. See example to right.

Lompa Ranch North Specific Plan

h) Commercial centers that include multiple buildings shall incorporate a consistent architectural theme. Pad site buildings with conflicting architectural style are prohibited.

Lompa Ranch North Specific Plan

2.4.5 Commercial Roof Form

a) Rooflines shall include variations to add visual interest and reduce the scale of large buildings. Refer to example below.

b) Roof profile elements visible at ground level shall incorporate horizontal and vertical offsets as depicted in the example above.

c) All rooftop equipment shall be screened from public view at street level and the parking lot.

d) All roof mounted mechanical equipment must be screened from public view at the street level and the parking lot.

2.4.6 Commercial Materials and Colors

a) The colors and materials of new buildings shall be compatible with those of adjoining buildings/uses.

b) Exterior building materials shall be of high quality. These may include, but are not limited to:

- brick
- stained, painted, or weathered wood/cementitious products such as heavy timbers or stock lumber
- stone veneer/cultured stone
- integral color split face block or rough cut wood
- metal such as corrugated, battened or standing panelized systems; performed painted or stained metal shapes
- fabric or metal awnings
- dimensioned asphalt or simulated wood shingles

Lompa Ranch North Specific Plan

- tilt-up concrete with wood texture, or other similar treatment

Lompa Ranch North Specific Plan

- c) Accent colors (including vibrant colors) may be used to emphasize special façade elements in order to attract attention at focal points.
- d) Facades shall include the use of earth tone palette colors in broad expanses. The use of high intensity colors, very dark colors or fluorescent colors are discouraged unless they are used to accentuate architectural forms or features.
- e) Building trim and accent may feature a brighter, more intense palette of colors used to direct focus toward important building elements.
- f) The following exterior building materials are not allowed as predominant features on building facades:
 - integral color smooth-faced or painted concrete masonry
 - tilt-up concrete panels without textures or finishes
 - pre-fabricated steel panels
 - unprotected wood
 - dimensional asphalt shingles (architectural grade asphalt shingles may be used on roofs)

2.4.7 Single Family Residential Architecture

Architectural standards for residential areas promote an upscale development concept that reflects a western and ranching heritage while providing for modern amenities and features. Although neighborhoods may include distinctive architectural designs, common elements serve to create a cohesive community that creates a sense of place.

2.4.8 Single Family Building Mass and Form

- a) Home facades shall incorporate the architectural style and materials outlined in section 2.4.1.
- b) A minimum of 3 distinctive floor plans shall be used within each subdivision. Subdivisions with less than 20 lots are exempt from this requirement. Phasing of 20 units or less does not circumvent this standard.
- c) Architectural details and stylings used on the front of the home shall be carried over to all elevations.
- d) A minimum of 3 distinctive front elevations shall be included for each model within subdivisions. Matching elevations shall not be allowed to repeat next to each other.
- e) Varied setbacks, floorplans, and elevation packages shall be used within subdivisions to create a visually interesting streetscape.

Lompa Ranch North Specific Plan

2.4.9 Single Family Roof Form

a) Roof planes are required to vary through the use of architectural features such as dormers, gables, hipped roofs and variations in pitch appropriate to the homes chosen architectural style.

2.4.10 Single Family Materials and Colors

a) As mandated within other provisions of this handbook, single family homes shall incorporate an[~~e~~] earth tone color palette. The use of bright and vibrant colors is prohibited with the exception of enhancing key architectural elements and features.

b) Conflicting architectural styles within a single subdivision shall be prohibited.

c) Building materials and elements shall be consistent with those outlined under previous standards.

2.4.11 Single Family Garages

a) Garages shall include a minimum of 5 feet offset from inhabitable areas. Front elevations should provide focus on living areas and not garages.

b) Home plans shall incorporate one of the garage designs listed below and each subdivision shall incorporate at least two of these techniques to reduce the emphasis of the garage on the street (see examples to left).

- Recessing garage back a minimum of five (5) feet in relationship to the front of the house.

- Incorporation of a side-load garage that eliminates the continuous view of garage doors from the street.

Lompa Ranch North Specific Plan

c) Garage forward plans shall be permitted when offsets (5 feet minimum) exist for the garage in order to provide visual distinction between the garage and residence. See examples below.

2.4.12 Multi-Family Architecture

Multi-family standards are intended to result in a visually pleasing product that does not reflect a “big box” appearance and incorporates elements to break up building masses, provide articulation at a human scale, and complement single family uses within the Lompa Ranch North SPA.

2.4.13 Multi-Family Building Mass and Form

a) Facades of multi-family buildings shall be articulated using at least one of the architectural elements previously listed in the Architectural Theme standards.

b) Buildings shall incorporate facade articulation with no long expanses of flat wall planes, vertically or horizontally, exceeding 50 feet (see example to left).

c) Architectural elements (i.e., exterior materials, fenestration, window trims, cornices, arches, etc) shall be utilized on all sides of the building.

d) Architectural elements such as towers, piers and varied rooflines may be used to break up the horizontal massing and provide visual interest.

Lompa Ranch North Specific Plan

e) Single family attached products such as townhomes that include garages and/or carport are more than 50 percent of the total width of the unit shall incorporate architectural features such as shutters, garage door window trim and minimum offsets of 2 feet, to reduce the visual impact of garages and carports on the front façade.

f) Garages and carports not attached to the main residential building shall match the main structure in building design, materials, roof pitch and architectural character.

2.4.14 Multi-Family Roof Form

a) Roofs planes shall include variation which can be accomplished with the inclusion of elements such as dormers, gables, hipped roofs and variations in pitch. (See example to right).

b) Roof materials shall include concrete tile, clay tile, slate, or architectural grade (30+ year) composition shingles. Metal roofing is prohibited as a primary material but may be used as an accent feature when combined with the allowed materials.

2.4.15 Multi-Family Materials and Colors

a) As mandated within other provisions of this handbook, multi-family uses shall incorporate an earth tone color palette. The use of bright and vibrant colors is prohibited with the exception of enhancing key architectural elements and features.

b) Varied elevations may be used within a single project. However, conflicting architectural styles within a single multi-family development shall be prohibited.

c) Building materials and elements shall be consistent with those outlined under previous standards.

Lompa Ranch North Specific Plan

3 Public Services and Infrastructure

3.1 Parks, Open Space, and Trails

The Lompa Ranch North SPA envisions a community that is linked together through a system of trails, open space, and parks. The intent of these standards is to implement the provisions of the *Unified Pathways Master Plan*; *Parks and Recreation Master Plan*; and *Open Space Master Plan* adopted by Carson City.

3.1.1 General Standards

a) A Landscape Maintenance District (LMD) shall be formed by the Master Developer to provide for the maintenance and upkeep of open space and common area landscaping, trails, and park/recreation facilities and amenities. The LMD shall be in place prior to the issuance of the first certificate of occupancy.

b) A private homeowner's association (HOA) shall provide for the maintenance of all private landscape features and non-public recreation facilities (i.e. private parks within gated communities, etc.).

c) Design of open space areas shall follow the standards and policies of the Carson City Open Space Plan, adopted by Carson City in June 2000.

d) Pathways and trails, other than those described in Section 3.1.2 (following) shall conform to the standards and policies of the Unified Pathways Master Plan adopted by Carson City on April 6, 200~~1~~6 (as revised March 15, 2007).

e) Any new park facilities within the Lompa Ranch North SPA shall conform to the *Parks and Recreation Master Plan* as adopted by Carson City on April 6, 2006.

f) Sidewalk connections to the Lompa Ranch North SPA trail/pathway system shall be provided in order to provide convenient and logical access to the trail system, parks/recreation areas, and open space.

3.1.2 Trails and Pathways

a) Trails, pathways, and sidewalks not specifically called out within this section shall conform to the standards outlined in Section 6 of the Carson City Unified Pathways Master Plan (Pathway Types).

Lompa Ranch North Specific Plan

[b) For the park area west of the freeway, a meandering path (consistent with Unified Pathways Master Plan standards) shall be constructed along a north/south route, connecting 5th Street to the northern boundary of the SPA area. This pathway may follow a proposed drainage channel(s) where feasible and shall meet the guidelines for an “off-street/multi-use trail.” A multi-use path shall connect to the SPA’s park/recreation facilities in this project.]

b) As individual subdivisions and/or projects are submitted for review, the applicant/developer shall be required to demonstrate that trail connectivity between parks, trails, open space, and the high school is being provided. This shall be to the satisfaction of the Community Development and Parks, Recreation and Open Space Departments.

c) The trails and pathway system shall be constructed of concrete with a portion of it constructed using stabilized decomposed granite.

3.1.3 West Side Facilities

The following standards apply to properties within Lompa Ranch North that lie west of Interstate 580:

a) Prior to the issuance of the certificate of occupancy for the 750th residential unit west of Interstate 580, the Master Developer shall construct and dedicate to the City a minimum 10-acre neighborhood park site on the west side of the freeway as shown on the adopted land use map. This shall be coordinated through and agreed upon by the Carson City Parks, Recreation and Open Space Department.

b) For the park area west of the freeway, a meandering path (consistent with Unified Pathways Master Plan Standards) shall be constructed along a north/south route, connection 5th Street to the northern boundary of the SPA area. This pathway may follow a proposed drainage channel(s) where feasible and shall meet the guidelines for an “off-street/multi-use trail.” A multi-use path shall connect to the SPA’s park/recreation facilities in this project.

[d]c) A fitness course may be substituted for park benches along the north/south trail. See examples below:

Lompa Ranch North Specific Plan

~~[c] For park area east of the freeway, the north/south trail being constructed by the City shall, at a minimum, include landscaping and pedestrian amenities. Trees (either evergreen or deciduous) shall be planted at a rate of 1 tree per 50 lineal feet with a minimum of 4 shrubs per tree. Park benches shall be located along the trails at a rate of 1 bench per 500 lineal feet of trail along with mileage markers at one-mile intervals.]~~

[e]d) An **east-west** off-street multi-use path shall be constructed on the freeway's west side of the Lompa Ranch North SPA along 5th Street and connected to ~~[a minimum 10-acre park]~~ **the east side development**. Timing of this trail along with final alignment shall be in conjunction with new development and coordinated through the ~~[Department of]~~ Parks, Recreation, and Open Space **Department**.

[f]e) An east-west multi-use path shall connect ~~[the existing path along 5th Street]~~ with the north/south trail, as depicted in the Unified Pathways Master Plan **and described in c) and d) above**.

~~[g) As individual subdivisions and/or projects are submitted for review, the applicant/developer shall be required to demonstrate that trail connectivity between parks, trails, and open space is being provided. This shall be to the satisfaction of the Community Development and Parks, Recreation, and Open Space Departments.]~~

[h]f) For park area west of the freeway, trails, pathways, and sidewalks shall provide off-street connectivity from 5th Street to Carson High School and Robinson Street.

3.1.4 East Side Facilities

The following standards apply to properties within Lompa Ranch North that lie east of Interstate 580:

a) The Master Developer shall work with the Carson City Parks, Recreation and Open Space Department and provide for a 3-acre minimum neighborhood park site on the east side of Interstate 580 as depicted on the land use plan. The park site shall be constructed and dedicated to the City prior to the issuance of the certificate of occupancy for the 250th residential unit located on the east side of I-580. This shall be

Lompa Ranch North Specific Plan

coordinated through and agreed upon by the Carson City Parks, Recreation and Open Space Department.

b) For park area east of the freeway, the north/south trail being constructed by the City shall, at a minimum, include landscaping and pedestrian amenities. Trees (either evergreen or deciduous) shall be planted at a rate of 1 tree per 50 lineal feet with a minimum of 4 shrubs per tree. Park benches shall be located along the trails at a rate of 1 bench per 500 lineal feet of trail along with mileage parkers at one-mile intervals.

c) The City property (approximately .13 acres) adjacent to the 3-acre minimum neighborhood park site shall be included in the park's design and constructed with the other park amenities.

3.1.[3]5 Open Space

- a) All identified wetland areas within the Lompa Ranch North SPA shall be preserved as dedicated open space.
- b) Drainage channels shall be incorporated into open space areas and include trails/paths as described in section 3.1.2.
- c) Open space areas shall be maintained through a LMD and/or by a private homeowners association(s).
- d) Landscape medians, parkways, corridors, etc. included within common or open space areas shall be maintained by a private homeowners association(s) and/or through the LMD.
- e) Open space areas that remain private shall not include public access (if privately owned) and shall be maintained by a private homeowners association and not through an LMD.

3.1.[4]6 Parks – General Standards

- a) Parks within the Lompa Ranch North SPA shall be maintained through implementation of a Landscape Maintenance District. Any private parks (without general public access) shall be maintained by a private homeowners association(s).
- b) Opportunities for joint use of park and open space facilities (i.e. stormwater detention basins) shall be a priority within the Lompa Ranch North SPA. **This includes the incorporation of one or more dog park facilities.**
- c) All park facilities and open space areas shall have access to the overall trails/ ~~and~~ pathways **system and sidewalk** network within the SPA area.
- d) Smaller public parks are discouraged within the SPA in favor of larger community parks. Private small parks or pocket parks may be permitted within individual subdivisions but shall be maintained by a private HOA, not the LMD.

Lompa Ranch North Specific Plan

e) Park facilities within Lompa Ranch North will be coordinated with the Carson City Parks, Recreation, and Open Space Department for review and approval as individual projects within the Lompa Ranch North SPA are brought forward.

f) Park design shall be consistent with Carson City Parks, Recreation, and Open Space Department guidelines and **design** standards, including water conservation design elements.

g) Playgrounds within public parks shall be designed to be universally accessible per design standards adopted by the Carson City Parks, Recreation and Open Space Department.

h) As part of the overall Lompa Ranch North park plan , provisions for a neighborhood “Splash Pad” and/or water play feature shall be included to the approval of the Carson City Parks, Recreation and Open Space Department.

i) New parks shall be designed to allow for automobile access, including City maintenance vehicles and emergency services.

j) The Master Developer, at its cost, will dedicate land and improvements for two neighborhood parks, detention basin parks and trails/pathways within the Project; as a result, the residential construction tax described in Carson City Municipal Code 15.06 – Residential Construction Tax et. seq. will not be collected by Carson City at the time building permits are issued for residential dwellings in the Project.

[3.1.5 — West Side Park]

[a) Prior to the issuance of the certificate of occupancy for the 750th residential unit west of Interstate 580, the Master Developer shall make available a minimum 10-acre community park site on the west side of the freeway as shown on the adopted land use map. This shall be coordinated through and agreed upon by the Parks, Recreation, and Open Space Department.]

[3.1.6 — East Side Park]

[a) The Master Developer shall work with the Carson City Parks, Recreation, and Open Space Department and provide for a 3-acre minimum neighborhood park site on the east side of Interstate 580 as depicted on the land use plan. The park site shall be dedicated prior to the issuance of the certificate of occupancy for the 250th residential unit located on the east side of I-580. This shall be coordinated through and agreed upon by the Parks, Recreation, and Open Space Department.]

3.2 Sanitary Sewer

a) All new development within the Lompa Ranch North SPA shall be required to connect to municipal sanitary sewer service.

Lompa Ranch North Specific Plan

b) **Prior to submittal for the first construction permit, a complete description of all phasing must be submitted. This phasing description must indicate the geographical boundaries of each phase, a description of the proposed development for each phase, and the estimated sewer demand imposed by each phase.** A final sewer report demonstrating capacity to serve the development shall be submitted with each individual project within the SPA boundary. **Any existing sewer capacity provided to the development shall be on a “first come, first served” basis. There may be additional future infrastructure or costs associated with serving the development depending on build out time frames.**

c) The site has no known constraints which would impact the ability to be served by a gravity fed extension of the public sewer. **Existing sewer manholes in the SPA have vents. Any sewer vents located within or near the boundary of a phase must be evaluated as part of the sewer analysis for that phase to prevent odor issues.**

d) An overall water and sewer technical report **for each phase** shall be submitted to **and approved by** Carson City prior to **submittal for the first construction permit of each phase** [~~the first tentative map approval~~], to ensure that each project phase is properly sized and designed. The Lompa Ranch North Water and Sewer Demand Report is included as Appendix 5 of this document. **Water and sewer technical reports shall include analysis of downstream/offsite capacities. Technical reports shall cite sources of any rate of demand used.**

3.3 Water Service

a) All new development within the Lompa Ranch North SPA shall be required to connect to municipal water service.

b) **Prior to submittal for the first construction permit, a complete description of all phasing must be submitted. This phasing description must indicate the geographical boundaries of each phase, a description of the proposed development for each phase, and the estimated water demand imposed by each phase.** All new development shall be required to pay applicable water connection fees and demonstrate that adequate water supply is available to serve the project and dedicated for use. **Any existing water capacity provided to the development shall be on a “first come, first served” basis. There may be additional future infrastructure or costs associated with serving the development depending on building out time frames.**

Lompa Ranch North Specific Plan

c) Separate irrigation meters will be employed in accordance with the guidelines present at the time of connection.

d) An overall water and sewer technical report **for each phase** shall be submitted to **and approved by Carson City** [the County] prior to **submittal for the first construction permit for each phase** [the first tentative map approval], to ensure that each project phase is properly sized and designed. The Lompa Ranch North Water and Sewer Demands Study is included as Appendix 4 of this document. **Water and sewer technical reports shall include analysis of downstream/offsite capacities. Technical reports shall cite sources of any rate of demand used.**

3.4 Storm Water Management

The Lompa Ranch area benefits from extensive review and policy implementation that has been performed by Carson City as part of their long-range planning and infrastructure management processes. It is a goal of this Specific Plan to adhere to and complement this planning work. Policy *LR-SPA 3.1 Floodplain and Drainage*, from the Carson City Master Plan is therefore included in this document as a means of establishing long-range storm water management planning for Lompa Ranch North. This policy states:

- *The existing floodplain shall be identified based on FEMA mapping with post-freeway drainage improvements for development of the final SPA. In order to develop the property, drainage improvements will be required to mitigate the 100-year floodplain on the property. This may also require amending the FEMA mapping through a letter map amendment process. Once the new floodplain is determined, designated land use intensities shall be developed outside this floodplain area.*
- *An overall storm water management plan shall be developed with the final SPA to ensure adequate drainage facilities to serve the entire SPA area.*
- *A detailed wetlands delineation shall be provided with the final SPA identifying any areas that meet the Federal 404 definition of wetlands. Following wetland identification, designated land use intensities shall be developed outside the wetlands.*

Per the above policy, a wetlands delineation is currently planned for Spring 2016. The completion deadline for this task is June 30, 2016. No development shall occur within the Lompa Ranch North SPA until the wetlands delineation has been completed.

Additional resources for guiding storm water management (and other utilities) are the Conceptual Drainage Study and Stormwater Management Report for Lompa Ranch North (included in Appendix 1). In particular, this report states the following:

Lompa Ranch North Specific Plan

Based on the floodplain analysis, it is recommended that a LOMR be pursued based on the existing topography. The LOMR would remove much of the Lompa Ranch from the burden of delineated floodway both upstream and downstream of the Highway 395. It would establish discharges which could be used for the design of proposed drainage improvements including the design of channels along 5th Street, Saliman Drive, Robinson Road and north of Carson High School. In addition the model could be used for future site development planning and design and would be considered as the effective model for future modeling efforts, specifically those that would be part of a CLOMR for new development.

The existing *Master Plan Policy LR-SPA 3.1* and the *Conceptual Drainage Study and Stormwater Management Report* therefore form part of the standards for the Lompa Ranch North SPA.

~~[The LOMR must be approved by Carson City and submitted to the Federal Emergency Management Agency (FEMA) prior to the submittal of the first tentative map. The CLOMR must be approved by Carson City and submitted to FEMA prior to the commencement of site development.]~~ **The LOMR must be approved by Carson City and submitted to the Federal Emergency Management Agency (FEMA) prior to submittal for the first construction permit. Prior to any construction permit being issued, the development must have a conditional letter of map revision (CLOMR) approved by Carson City and FEMA. If the property is divided and sold to different owners, each separate development in the floodplain must have a CLOMR approved by FEMA prior to any construction permit being issued. The developer of any parcel in the flood plain, prior to any construction permit being issued, must provide funds to the City to process a Letter of Map Revision (LOMR) after the improvements are complete.**

Additional standards include:

- a) The primary channels provided along Robinson Street, Saliman Road, Interstate 580, and 5th Street shall be designed to contain the existing off-site watershed discharges as well as the existing discharges from the SPA area.
- b) Onsite retention and detention facilities are required within the development of multi-family and commercial parcels.
- c) Existing drainage patterns shall be maintained.
- d) A comprehensive drainage impact analysis for the overall Lompa Ranch North SPA shall be reviewed and approved with the first tentative map and/or permit request. The analysis shall provide estimates of project impacts at buildout along with required upgrades, improvements, etc. as well as with triggers for when these improvements are required.
- e) Updates to the master drainage analysis shall be provided for any project proposing multi-family or commercial uses.
- f) Prior to submittal for the first construction permit, a complete description of all phasing must be**

Lompa Ranch North Specific Plan

submitted. This phasing description must indicate the geographical boundaries of each phase, a description of the proposed development for each phase, and the estimated stormwater runoff imposed by each phase.

Appendix 1 contains the Conceptual Drainage Study and Stormwater Management Report for Lompa Ranch North.

3.5 Utility Service

a) All utility services within the Lompa Ranch North SPA shall be undergrounded. Overhead power lines shall be prohibited.

b) Plans for electrical, natural gas, telephone, and cable service shall be reviewed and approved by the applicable purveyor (i.e. NV Energy, Southwest Gas, AT&T, etc) prior to the issuance of a building permit.

3.6 Roadways

A traffic impact study has been completed for Lompa Ranch North (included in Appendix 2). This study includes recommended roadway improvements that mitigate the projected impacts. These roadway improvements are included below under their relevant heading.

a) All roadways within the Lompa Ranch North SPA shall comply with the standards and requirements included within the Carson City Municipal Code. This includes the provision of sidewalks where appropriate. All sidewalks in the Lompa Ranch North SPA shall be designed to provide connectivity to multi-use paths, parks, and open space.

b) Prior to submittal for the first construction permit, a complete description of all phasing must be submitted. This phasing description must indicate the geographical boundaries of each phase, a description of the proposed development for each phase, and the estimated traffic impact imposed by each phase.

c) An easement agreement or right of way must be in place prior to approval of any construction permits which are part of a phase which requires roadway improvements which will need additional right-of-way to be completed.

d) Each phase will require a traffic impact study to be completed and submitted for that phase prior to approval of any construction permits in that phase. The traffic study for Phase 1 will require coordination with the School District to mitigate impacts along Robinson Street.

Lompa Ranch North Specific Plan

3.6.1 Saliman Road

a) Consistent with the conclusions/recommendations outlined in the traffic impact analysis (Appendix 2), add **northbound dual lefts at E. William/Saliman intersection, and add northbound right turn lane at 5th Street.** [~~westbound right turn lane. Robinson Street should be extended to intersect with a new north-south “spine road” within the project area and as shown in Exhibit 2. The spine road should extend north from a new intersection with 5th Street. Both Robinson Street and the Spine Road can be constructed with one through lane in each direction. For Phase 1, the spine road does not need to extend north of the Robinson Road extension.~~] Include drainage improvements. Channel section to include open space for multi-use path.

3.6.2 Robinson Street

a) Robinson Street shall be improved to collector standards established by the Carson City Municipal Code. **Robinson Street should be extended to intersect with a new north-south “spine road” within the project area and as shown in Exhibit 2. Robinson Street can be constructed with one through lane in each direction. Include drainage improvements. Channel section to include open space for multi-use path.**

b) Consistent with the conclusions/recommendations outlined in the traffic impact analysis (Appendix 2), add **westbound right turn lane at Saliman Road, and widen Robinson Street to accept dual left turn lanes from Saliman Road.** [~~northbound right turn lane and provide southbound dual lefts. This will require the widening of the east leg of Robinson Street to accept the two left turn lanes.~~]

3.6.3 Fifth Street

a) Fifth Street shall include new drainage improvements to address site development conditions to the satisfaction of the Carson City Engineering and Public Works Departments.

b) Consistent with the conclusions/recommendations outlined in the traffic impact analysis (Appendix 2), add an intersection where the new Spine Road will meet 5th Street with an eastbound left turn lane, westbound right turn lane, southbound exclusive left and right turn lanes, and signalization (signalization only if warranted). Widen 5th Street at this intersection to accommodate turn lanes. Also, add a westbound right turn lane at Airport Road. Add a westbound right turn lane at Saliman Road, which may already be warranted without the project.

Lompa Ranch North Specific Plan

~~[b] Consistent with the conclusions/recommendations outlined in the traffic impact analysis (Appendix 2), add a northbound right turn lane, and a westbound right turn lane (which may already be warranted without the project).]~~

3.6.4 Airport Road

a) Right-turn lanes will be added along Airport Road based on the recommendations included in the reviewed and approved traffic impact analysis. The Carson City Engineering Department shall determine compliance with this standard.

b) US 50/Airport – Consistent with the conclusions/recommendations outlined in the traffic impact analysis (Appendix 2), Provide northbound dual left turn lanes.

~~[c] Airport/5th – Consistent with the conclusions/recommendations outlined in the traffic impact analysis (Appendix 2), Add a westbound right turn lane.]~~

3.6.5 North/South Collector (Spine Road)

a) A collector roadway (**Spine Road**) shall be constructed from 5th Street extending north to US Highway 50 (~~dependent upon required easements to be secured through adjoining parcels to the north~~). This road shall be designed as a limited access collector (per City standard) and include additional space for a multi-use path and landscaping, separated from vehicular traffic. **The Spine Road can be constructed with one through lane in each direction. For Phase 1, the spine road may need to extend north of the Robinson Street extension.**

b) US 50/Gold Dust Casino – Consistent with the conclusions/recommendations outlined in the traffic impact analysis (Appendix 2), add a northbound right turn lane and **widen the south leg to accept a new left turn lane from westbound E. William Street.**~~[, westbound dual lefts. This will require the widening of the south leg to accept a new lane.]~~ The south leg will continue to connect with the proposed north-south spine road.

c) Consistent with the conclusions/recommendations outlined in the traffic impact analysis (Appendix 2), a new three- to four-leg intersection at Robinson Street/Spine Road should be constructed to provide a north leg at this intersection. This north leg is proposed to continue to its connection with the south leg of the William Street/Casino intersection. This will require widening the existing south leg of this intersection to a standard two to three lane cross section.

Lompa Ranch North Specific Plan

d) The preferred northern intersection of the spine road is at the existing signalized intersection on William Street serving access to the Gold Dust Casino. The south leg of this intersection should be widened to accommodate a potential additional westbound to southbound left turn lane at this intersection. The spine road is anticipated to carry approximately 12,000 vehicles per day at Build Out. This volume approaches the threshold for a four-lane roadway. Further analysis and continuing discussions with the property owners south of William Road will be required.

3.6.6 U.S. 50/E. William Street

a) Consistent with the conclusions/recommendations outlined in the traffic impact analysis (Appendix 2), add westbound dual left turn lanes at the new Spine Road.

3.7 Traffic Impacts

a) A [~~comprehensive~~] **generic** traffic impact analysis for the overall Lompa Ranch North SPA has been reviewed and **accepted** [~~improved~~] with this Specific Plan. This analysis provides estimates of the project impacts at buildout along with required upgrades, improvements, etc. [~~along with triggers for when these improvements are required.~~] **Additional traffic impact studies will be required for each phase of development prior to approval of any construction permits which are part of that phase.**

b) Updates to the master traffic impact analysis shall be provided for any project generating more than 80 peak hour trips to determine if roadway upgrades/improvements are triggered. Such updates shall also address long-term cumulative impacts from the site as a whole so that appropriate refinements may be made to any mitigation measures.

Appendix 2 contains the Traffic Impact Study for Lompa Ranch North.

3.8 Fire Protection

The Carson City Fire Department currently services the Lompa Ranch North area from Fire Station # 1 located on Stewart Street. As development occurs within the Specific Plan boundary and surrounding area(s), an additional facility and/or equipment may be needed in order to ensure adequate levels of service for new development. As such, the following standards are included within this SPA:

a) As individual projects and subdivisions are submitted, the Carson City Fire Department shall review development plans in context with existing service limitations to ensure adequate levels of service are maintained.

Lompa Ranch North Specific Plan

b) The Carson City Fire Department has the ability to condition projects to ensure adequate levels of service are maintained for Lompa Ranch North. Such conditions include requiring fire sprinklers for new homes if response times are below accepted levels, inclusion of fire resistant building materials, requiring upgrades to existing equipment or purchase of new equipment, etc.

[c) The Master Developer shall reserve land for a new fire station located central to the SPA area should the Fire Department determine that a new station within Lompa Ranch North best serves the community at large.]

c) In order to assist in funding new fire facilities within the area (i.e. fire station), individual builders within Lompa Ranch North shall work with the Carson City Fire Department to participate in an impact fee program implemented by Carson City which provides funds (to be paid at time of building permit) that are dedicated to fire improvements. In the absence of a current City-wide impact fee program, impact fees shall be as follows for Lompa Ranch North: a minimum of \$1,000.00 per dwelling unit in single family or multi-family residential development. Also, a minimum impact fee of \$1,000.00 per 1,000 square feet of business, industrial, commercial or lodging facilities.

d) In lieu of and as an alternative to the fire impact fee, it may be possible for individual builders within Lompa Ranch North to work with the Carson City Fire Department to determine if other mitigation measures may be available. Such measures could include, but are not limited to, providing improvements such as paving, utility extensions, etc. along with construction of new facilities, etc. These improvements shall be credited back to any applicable fire impact fee. This shall be reviewed on a case by case basis dependent on current Fire Department needs and demands.

e) New development within Lompa Ranch North shall participate in any applicable impact fee program that is enacted by Carson City. This SPA shall not exempt development from any impact fee program adopted post-post approval of this SPA.

3.9 Police Protection

The Carson City Sheriff's Department currently operates patrols in the area. The following standards related to police protection are provided for the Lompa Ranch North SPA:

a) All new projects submitted for review by Carson City shall be routed through the Sheriff's Department for review and comment.

Lompa Ranch North Specific Plan

- b) The Sheriff's Department shall reserve to the right to condition projects in order to implement and or incorporate crime prevention measures, etc.
- c) New commercial projects within Lompa Ranch North shall be required to submit a lighting and security plan to the Sheriff's Department for review and approval.

3.10 Schools

The following standards have been developed in conjunction with the Carson City School District:

- a) A new elementary school site (minimum of 10 acres) shall be reserved within Lompa Ranch North to meet future enrollments needs.
- b) The elementary school site shall be made available prior to the issuance of the 700th residential certificate of occupancy.
- c) Generally, the 10-acre elementary school site should be located on the west side of Interstate 580, central to the project site near the current terminus of Robinson Street.
- c) All residential development within the Lompa Ranch North SPA shall be required to provide estimated student enrollment projections to the Carson City School District for review.
- d) The Master Developer of the Lompa Ranch North SPA shall work with the School District to participate in the current (2016) School Facilities Master Plan Update process to ensure that needs identified within the SPA boundary are addressed.

EXECUTIVE SUMMARY

The Lompa Ranch Specific Plan area is a large, unique and diverse development located in the heart of Carson City. The Lompa Ranch Specific Plan Area is located south of Highway 50 and north of Fairview Drive. The policies and guidelines contained in the Lompa Ranch Specific Plan are applicable to all properties contained within the Specific Plan boundary and more specifically this Project Area. The drainage and transportation systems extend throughout the development and connect to 5th Street and through to Highway 50 to the north.

Specifically, section LR-SPA 3.1 outlines the following Floodplain and Drainage Policies:

- *The existing floodplain shall be identified based on FEMA mapping with post-freeway drainage improvements for development of the final SPA. In order to develop the property, drainage improvements will be required to mitigate the 100-year floodplain on the property. This may also require amending the FEMA mapping through a letter map amendment process. Once the new floodplain is determined, designated land use intensities shall be developed outside this floodplain area.*
- *An overall storm water management plan shall be developed with the final SPA to ensure adequate drainage facilities to serve the entire SPA area.*
- *A detailed wetlands delineation shall be provided with the final SPA identifying any areas that meet the Federal 404 definition of wetlands. Following wetland identification, designated land use intensities shall be developed outside the wetlands.*

Several regional watercourses exist adjacent to or flow through the specific plan area.

Run south of 5th Street stems from two sources. Runoff that breaks out of the Kings Canyon Creek several miles west of the project area as well as runoff generated by the urbanized watershed south off 5th Street. The combined runoff conveyed east and is ultimately discharged into Tributary H – a constructed watercourse whose headwaters are located south and west of the project Lompa Ranch. As part of the improvements in the area, some of which are associated with the construction of Highway 395, Tributary H is aligned such that runoff is conveyed beneath 5th Street west and released into the Kings Canyon Creek directly west of the Highway 395 Bridge.

This project study area is subjected to runoff from five regulatory watercourses – Vicee Canyon Creek, Ash Canyon Creek, Kings Canyon Creek, Goni Canyon Creek and Tributary H, as well as the local watersheds north of Highway 50, south of 5th Street, and east of Highway 395, all of which contribute runoff to the Kings Creek drainage system. It is the intent of this development to design and construct all necessary drainage improvements (channels, road culverts, etc) to collect and convey these watersheds to their natural downstream location. The flow will have a clear and unobstructed path from the upstream inlet to the project to the downstream outlet. The roads and structures are proposed to be laid out and constructed in a manner that does not block or impede the flow as it

STAR Consulting

439 W. Plumb Lane Reno, NV 89509
Phone: (775) 352-4200 Email: erin@starconsultingnv.com

traverses the site. A 100-year design event will be used for all drainage conveyance systems. Capacity of the downstream system will also be evaluated and improved or mitigated as appropriate with additional drainage improvements.

At this time, the design intent for the Project Area is to construct open, trapezoidal channels to convey the discharge around or through the site. Maintenance of the channels is a top priority for design considerations. The Developer will continue to work with Carson City Storm Water Management to finalize a design section that both allows for the required conveyance capacity and is also reasonable to maintain in both the short and long term. Grass-lined, earthen channels are favored for this application as they are aesthetically pleasing as to be incorporated into the park and open space system, provide conveyance capacity and are easily maintained and inspected. Preliminary channel sections are provided in the body of this analysis showing both rock-lines and earthen configurations. The rock-lined sections are expected to only be necessary where velocities in the channels may cause erosion to a grass-lined channel. In these cases, in addition to culvert outlets or energy dissipaters, rock lining or splash pads will be used.

The construction of this project is expected to be completed in phases. While specific development phase lines are unknown at this time, it is the intent of the Developer to construct the necessary drainage facilities for each phase and to only mass-grade a block or area has development is permitted and ready to proceed. The mass-grading and ground disturbance of large areas is in proposed or anticipated due to the derogatory impact on the natural and built environments of leaving large areas of disturbed land open and disturbed. Land disturbance will be limited to those areas necessary for immediate development.

Based on the floodplain analysis, it is recommended that a LOMR be pursued based on the existing topography. The LOMR would remove much of the Lompa Ranch from the burden of delineated floodway both upstream and downstream of the Highway 395. It would establish discharges which could be used for the design of proposed drainage improvements including the design of channels along 5th Street, Saliman Drive, Robinson Road and north of Carson High School. In addition the model could be used for future site development planning and design and would be considered as the effective model for future modeling efforts, specifically those that would be part of a CLOMR for new development.

I. INTRODUCTION

A. DESCRIPTION OF PROJECT

The project area is currently undeveloped. The Lompa Ranch area has been planned for development since the Specific Plan stage. The current project area is bound by Fairview Drive to the east, Saliman Road to the west, Highway 50 to the north and 5th Street to the South. For ease of reference, the entire study area is referred to as Lompa Ranch, which specifically encompasses 246 acres. The land is divided such that 200 acres lies west of Highway 395 with the remaining 46 acres is located the east of the highway. A map depicting the project limits is incorporated with this document (Figure 1).

Adequate drainage systems shall be provided in order to preserve and promote the general health, welfare, and economic well-being of the region. Drainage is a regional feature that affects all of Carson City. Drainage plans shall be consistent with and integrated with the Carson City drainage master plan upon adoption. This characteristic of drainage requires coordination and cooperation from both the public and private sectors.

Storm water drainage systems are an integral part of the development process. The planning of drainage facilities shall be included in the development process and in preparation of improvement plans.

Drainage systems require space to accommodate conveyance and storage functions. When the space requirements are considered, the provision for adequate drainage becomes a competing use for space along with other land uses.

Storm drainage planning for all development shall include the allocation of space for drainage facility construction and maintenance, which may entail the dedication of right-of-way and/or easements. The provision of multi-use facilities such as combining with parks, open space, and recreation needs is strongly encouraged.

(Division 14.1- Storm Drainage Policy and Basic Principles)

The purpose of this Conceptual Drainage Report is to quantify and identify the drainage system requirements of this development for space, multi-use opportunities and general integration with the project plan.

B. EXISTING SITE CONDITIONS

Independent studies from various engineering firms have been completed which analyzed the hydrologic and hydraulic impacts of contributing watersheds and associated watercourses in and around the Lompa Ranch area. These studies expand upon the original FEMA Flood Insurance Study for Carson City. Among

STAR Consulting

439 W. Plumb Lane Reno, NV 89509

Phone: (775) 352-4200 Email: erin@starconsultingnv.com

these were hydrologic and hydraulic efforts completed by WRC as part of the feasibility and design of Highway 395, while a more recent study was prepared as part of a physical map revision (HDR 2009). The intent of HDR analysis was to delineate the floodplain through the developed area west of Lompa Ranch and culminated in the removal of Highway 395 from the floodplain. In addition Kimley Horn and Associates compiled a 2-dimensional model using FLO-2D that focused exclusively on the drainage south of 5th Street. The Kimley-Horn model included Tributary H – a watercourse which contributes flow in the Kings Canyon Drainage System at a location upstream of the Highway 395 Bridge. A list of the previous studies follows:

- 1) HDR, *Draft Hydrologic Analyses and Results for Carson City Flood Insurance Study*, June 2010
- 2) HDR; *Draft Hydraulic Analyses and Results for the Carson City Flood Insurance Study*, July 2010
- 3) Kimley-Horn and Associates; *Southwest Carson City Flood Study*, February 2014
- 4) Manhard Consulting, LTD; *SW Carson City Regional Hydrologic Analysis Final Report*, March 2010
- 5) Northwest Hydraulic Consultants; *Summary Findings for Vicee Canyon Channel HEC-RAS Analysis Preliminary FIS/FIRM Review Support Carson City, NV*, September 2001
- 6) WRC Nevada; Inc *Hydrologic Analysis US 395 Bypass Freeway, Carson City Nevada*, April 1997
- 7) WRC Nevada; Inc *US 395 Bypass Section 404(b)(1) Alternatives Development and Evaluation Report*, June 30, 1998
- 8) WRC Nevada; Inc *Carson City Northwest Alternatives Analysis*, April 22, 1999
- 9) WRC Nevada; Inc *Carson City Northwest Drainage Facilities Hydrologic and Hydraulic Report*, November 5, 1999

The study area is subjected to runoff from five regulatory watercourses – Vicee Canyon Creek, Ash Canyon Creek, Kings Canyon Creek, Goni Canyon Creek and Tributary H, as well as the local watersheds north of Highway 50, south of 5th Street, and east of Highway 395, all of which contribute runoff to the Kings Creek drainage system. Of these contributing flow sources, runoff from Vicee Canyon Creek, Ash Canyon Creek, Kings Canyon Creek and Tributary H and the local drainage from Highway 50 coalesce upstream of Highway 395. The combined flow is conveyed underneath Highway 395 where it coalesces with runoff from Goni Canyon Creek and runoff generated by the local watersheds south of 5th Street, and the local watersheds east of Highway 395. The combined flow is conveyed east ultimately discharging into the Carson River.

II. EXISTING AND PROPOSED HYDROLOGY

A. EXISTING AND PROPOSED DRAINAGE BASIN BOUNDARIES

Detention is considered a viable method to reduce storm runoff from developed properties. Temporarily detaining storm runoff can significantly reduce downstream flood hazards as well as pipe and channel requirements. Storage also provides for sediment and debris collection which reduces maintenance requirements for downstream channels and streams.

Local detention storage for land development, which includes subdividing land, shall be required when the development increases flows and downstream conveyance capacities of the drainage system are not capable of handling non-detained flows, and the developer elects to not upgrade the existing storm drainage system. Onsite detention storage shall be sized to detain sufficient runoff to limit flows from a five (5) year storm (Q5) to their predevelopment condition.

The capacity of downstream conveyance systems shall be analyzed in accordance with this division and shall be based on runoff from the development as fully improved. Local detention can also be required when designated in flood or drainage master plans to reduce the peak rate in regional facilities. (Division 14.1.8)

A common detention facility is proposed to be incorporated into the neighborhood park proposed at the east end of Robinson. The area is proposed as a multi-use facility incorporating low depth storage.

The size and modeling of this neighborhood facility will be completed with the Tentative Map. The intent; however, is to detain the water for the Lompa Ranch area, north of 5th in a centralized system. This will allow for maintenance to be centralized and avoid the need for small individual basins throughout the community.

B. DESIGN STORM AND 100-YR DISCHARGES

As stated above numerous modeling efforts were completed for the LOMPA Ranch Area. However a comprehensive study incorporating the results of previous studies and creating a definitive hydrologic model accounting for the finalized improvements was still lacking.

As a part of the floodplain study, the various hydrologic analysis were reviewed and a single hydrologic model (broken into two parts) was created for the purpose of identifying the floodplain and floodway zones within Lompa Ranch east and west of Highway 395. Based on the previous studies, the hydrologic analysis was conducted using the Army Corps of Engineers Software HEC-1 and was based in part on the work

STAR Consulting

439 W. Plumb Lane Reno, NV 89509

Phone: (775) 352-4200 Email: erin@starconsultingnv.com

completed by WRC and the effective model prepared by HDR (August 2010). The new model effectively accounts for the current alignment of the known watercourses. Figure 2 illustrates the contributing watersheds. A table of preliminary discharges is provided on Table 1.

Localized drainage from the blocks will be directed to the channels through the streets. Curb will be used to contain the flow to the public right-of-way. The flow depth is not to exceed 6". In the event the capacity of the street is increased to allow for flow, one lane should be left available for emergency vehicles to pass.

Any development within a mapped floodplain will be required to provide a 1 to 1 volume and 2 feet of freeboard in accordance with the Carson City standards.

STAR Consulting

439 W. Plumb Lane Reno, NV 89509

Phone: (775) 352-4200 Email: erin@starconsultingnv.com

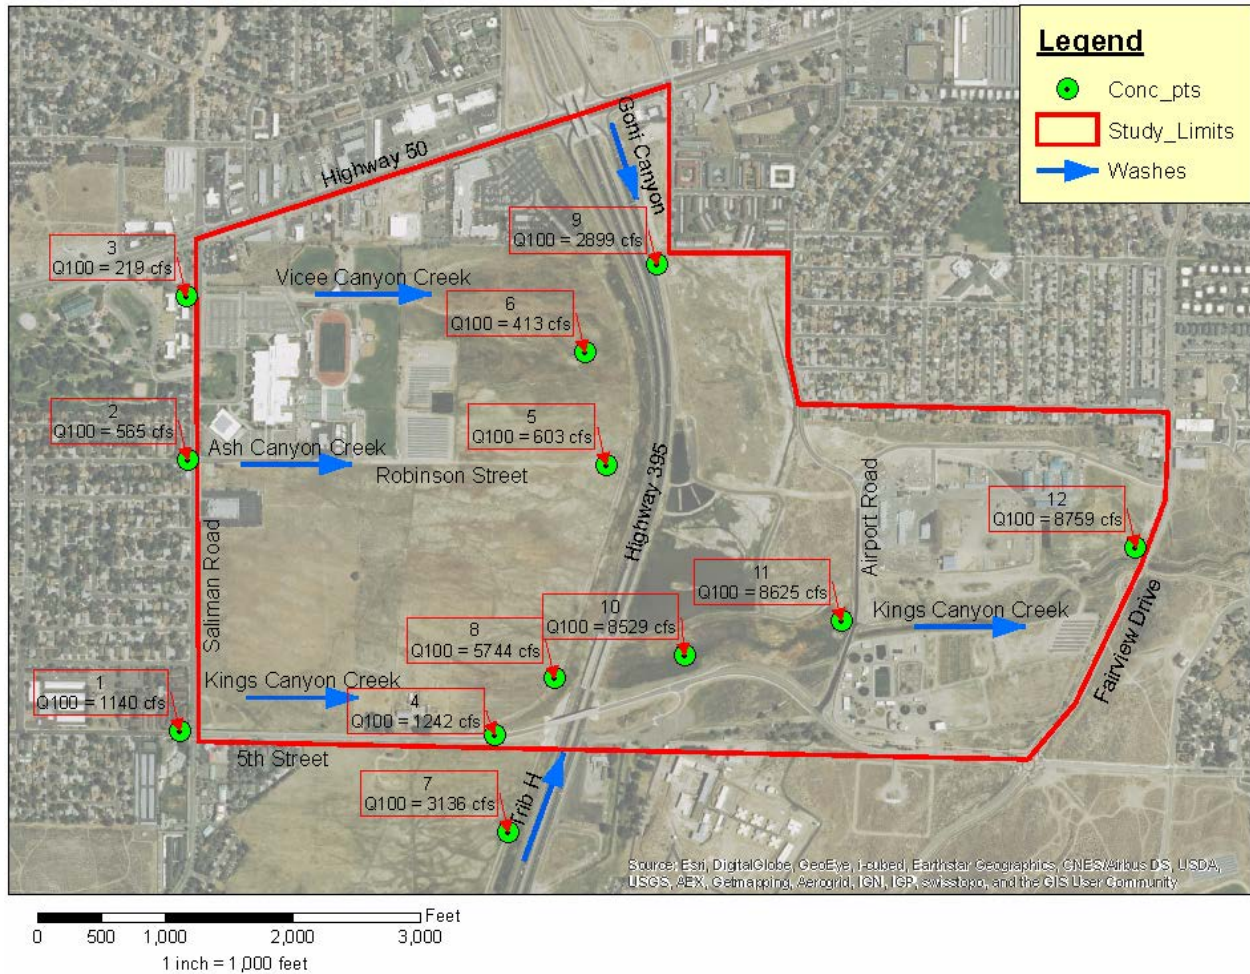

C. EXISTING DRAINAGE PROBLEMS

As the property is currently undeveloped, no existing drainage problems are known.

D. ON-SITE AND DOWNSTREAM DRAINAGE

The study area is subjected to runoff from five regulatory watercourses – Vicee Canyon Creek, Ash Canyon Creek, Kings Canyon Creek, Goni Canyon Creek and Tributary H, as well as the local watersheds north of Highway 50, south of 5th Street, and east of Highway 395, all of which contribute runoff to the Kings Creek drainage system. Of these contributing flow sources, runoff from Vicee Canyon Creek, Ash Canyon Creek, Kings Canyon Creek and Tributary H and the local drainage from Highway 50 coalesce upstream of Highway 395. The combined flow is conveyed underneath Highway 395 where it coalesces with runoff from Goni Canyon Creek and runoff generated by the local watersheds south of 5th Street, and the local watersheds east of Highway 395. The combined flow is conveyed east ultimately discharging into the Carson River. The watercourses and associated 100-yr discharges are illustrated in Figure 2.

FIGURE 2: PRELIMINARY DISCHARGE MAP

E. FLOODPLAIN

Based on the floodplain analysis, it is recommended that a LOMR be pursued based on the existing topography. The LOMR would remove much of the Lompa Ranch from the burden of delineated floodway both upstream and downstream of the Highway 395. It would establish discharges which could be used for the design of proposed drainage improvements including the design of channels along 5th Street, Saliman Drive, Robinson Road and north of Carson High School. In addition the model could be used for future site development planning and design and would be considered as the effective model for future modeling efforts, specifically those that would be part of a CLOMR for new development.

A CLOMR will be required for the proposed drainage infrastructure.

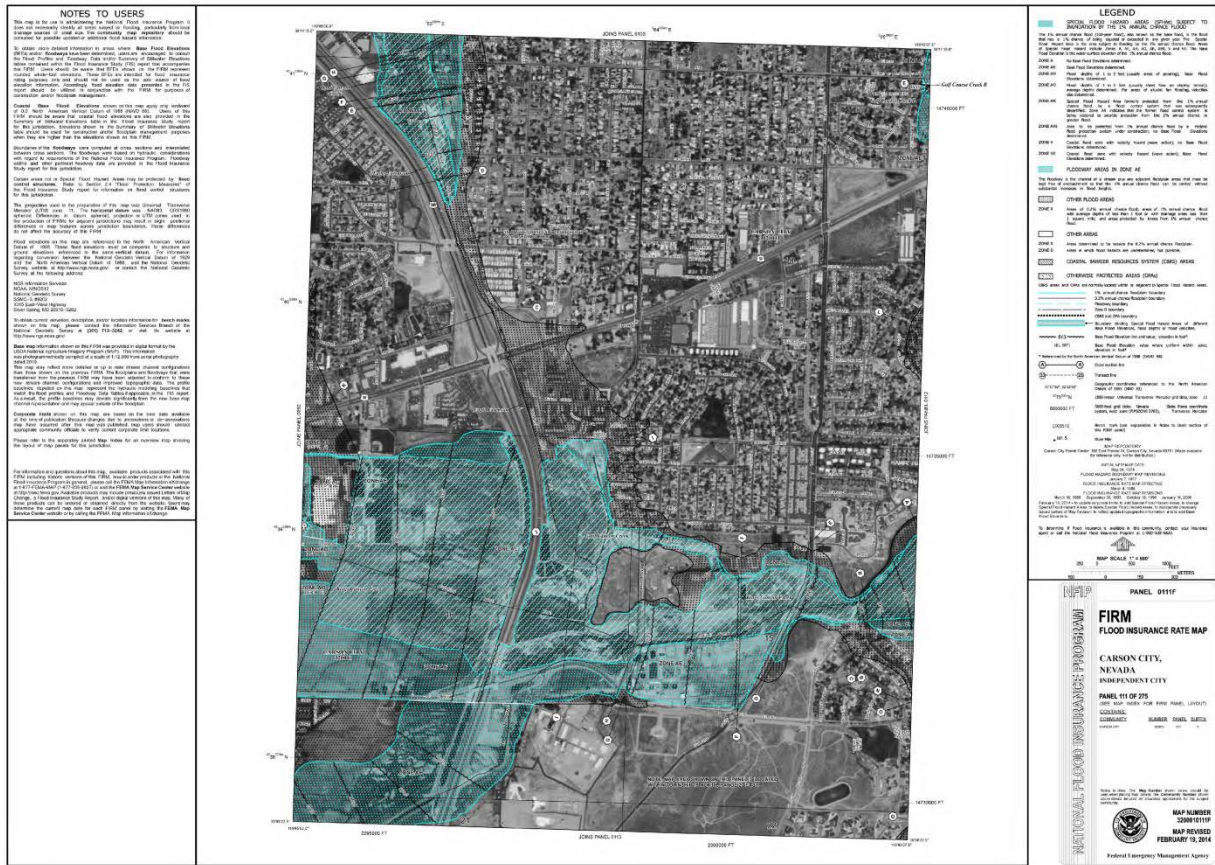

The existing floodway and floodplain is shown in Figure 3.

III. PROPOSED DRAINAGE FACILITIES (ON-SITE AND OFF-SITE)

A. ROUTING

The hydraulic analysis used the Army Corps of Engineers' software package HEC-RAS. The model was based on uniform, steady flow to determine the water surface elevations at specified points along the study reaches. The water surface elevations were then used to delineate the 100-year (0.1%) floodplain. The downstream tie in location for the updated model was the effective floodplain east of Fairview Drive. The upstream tie in location was the floodplain east of Saliman Road as delineated in the recently approved FIS prepared by HDR (Reference 1). A map illustrating the revised floodplain is provided in Figure 3.

In addition to modeling the floodplain throughout the study reach, the revised hydraulic analysis examined the floodway. This analysis determined that the floodway should be removed for the area west of Highway 395. This recommendation was first suggested as part of the study prepared by HDR (Reference 1). In addition, the floodway can be adjusted such that it aligns with the new Highway 395 Bridge and is contained within the constructed channel downstream, thus eliminating Lompa Ranch from the floodway. The proposed floodplain and floodway alignment are presented on Figure 3.

As shown by the map, the analysis did not identify large areas of land that could be readily removed from the floodplain. However, the floodway reduction was significant which should allow for development within the floodplain with minimal effort outside of elevating the development parcels using compacted fill or constructing conveyance channels to capture and direct flow to a logical outlet (i.e. Highway 395 Bridge).

Future development of the property will direct the flow to the major watercourses in the same manner as existing conditions.

B. MITIGATION MEASURES

1. CHANGE IN MANNER OF FLOW

Development shall tend to concentrate existing natural sheet flow into point flows at property lines. These point flows are generally associated with outlets from gutter flow, storm drains, and detention facilities. Downstream properties may experience a longer duration of storm flows, and greater flows in general due to a shortened time of concentration. Discharge of point flows on downstream property can cause increased erosion at the discharge point and further downstream. Therefore, downstream facilities shall be evaluated for runoff capacity during the design and review process. Mitigation of these point flows can be accomplished through energy dissipaters or flow spreaders. Point

STAR Consulting

439 W. Plumb Lane Reno, NV 89509

Phone: (775) 352-4200 Email: erin@starconsultingnv.com

flows shall be discharged to downstream properties at non-erosive velocities and depths of flow. (Division 14.1.3)

2. *DIVERSION OF DRAINAGE*

Development can alter the historic or natural drainage paths. When these alterations result in a local on-site drainage system that discharges back into the natural drainage-way or wash at or near the historic location, then the alterations (inter-basin transfer) are generally acceptable. However, when flows from the local on-site drainage system do not return to the historic drainage-way or wash, then inter-basin transfer may result. These inter-basin transfers are generally not acceptable. Planning and design of drainage systems shall not be based on the premise that storm water can be transferred from one basin to another unless part of an adopted city regional drainage system plan.

The flow of storm runoff shall be maintained within its natural drainage course unless reasonable use is demonstrated otherwise. When storm water is discharged into an existing drainage course, the peak discharge into the water course shall not adversely affect or cause damage to property along the drainage course now or in the future based on existing zoning and the Carson City master plan build-out conditions. Erosional impacts due to concentration of flows and increased flow durations shall be evaluated and mitigated. (Division 14.1.4)

3. *PROPOSED MITIGATION*

The proposed drainage system uses a combination of open channels and culverts for road crossings to direct the flow to an existing channel or existing downstream drainage infrastructure. The manner of discharge into the existing channel will be concentrated and as such, erosion protection such as splash pads should be considered with the Drainage Improvement Plans. The time of concentration and quantity of discharge will not be effected due to the attenuation effect from the detention basin on the peaks. The discharge locations are consistent with the historical discharge locations.

C. **CONCEPTUAL DRAINAGE IMPROVEMENT EXHIBIT**

The overall drainage concept for the master planned community is to construct several earthen channels at the perimeter and through the proposed development. Generally speaking, these channels are proposed to also incorporate recreational and open space components such as multi-use paths, benches, and supplemental vegetation. Maintenance access roads can also be incorporated into the multi-use path design and access. Culverts and storm drain is expected at road crossings and in the vicinity of commercial zones. The channels and culverts are sized for a design discharge which

allows for the clear flow path from the west to the east. The clear flow path for 100-yr discharges will allow for the existing discharges to pass through the site and exit to the east consistent with the manner in which it discharges under existing conditions. The storm water within each development is proposed to be contained within the pavement and curb with a depth not to exceed 6". In the event the road way drainage exceeds 6" in depth, a storm drain system will be added to direct the flow to the constructed channels.

Figure 4 shows the overall drainage concept for the development.

1. *VICEE CANYON CREEK*

The conceptual cross section for the Vicee Canyon Creek, from the high school to the Highway 395 channel is either an earthen or rock-lined open, trapezoidal channel. Pedestrian and multi-use paths are not proposed along this channel as it is not in a location or direction beneficial to circulation. One road crossing with the north-south spine road is expected. The preliminary design for this road crossing is a concrete box culvert. The flow will not be trapped behind the road crossing but will be allowed to flow under the road in the box culvert. Figure 5 shows the preliminary cross sections for the Vicee Canyon Creek improvements through Lompa Ranch.

2. ASH CANYON CREEK

The conceptual cross section for the Ash Canyon Creek, from Saliman Road, along Robison to the Highway 395 channel is either an earthen or rock-lined open, trapezoidal channel. Pedestrian and multi-use paths are a significant component to this design concept. The multi-use path proposed along this channel will provide a critical link between the multi-use path on 5th Street, east of the highway to the high school. One road crossing with the north-south spine road is expected. The preliminary design for this road crossing is a concrete box culvert. The flow will not be trapped behind the road crossing but will be allowed to flow under the road in the box culvert. Figure 6 shows the preliminary cross sections for the Ash Canyon Creek improvements along Robinson and through Lompa Ranch.

Phone: (775) 352-4200 Email: erin@starconsultingnv.com

3. *KINGS CANYON CREEK*

The conceptual cross section for the Kings Canyon Creek, along 5th Street from Robinson to the Highway 395 channel is an open channel or storm drain system. A physical constraint of horizontal clearance within the existing right-of-way will likely be a design constraint in the vicinity of the two non-participating parcels. One road crossing with the north-south spine road is expected. The preliminary design for this road crossing is a concrete box culvert. The flow will not be trapped behind the road crossing but will be allowed to flow under the road in the box culvert. Figure 7 shows the preliminary cross sections for the Kings Canyon Creek improvements through Lompa Ranch.

4. SALIMAN ROAD CHANNEL

The conceptual cross section for the Saliman Road channel, from the high school to 5th Street is either an earthen or rock-lined open, trapezoidal channel. Pedestrian and/or multi-use paths are a significant component to this design concept. The multi-use path proposed along this channel will provide a critical link between the pedestrian circulation on 5th Street to the high school and north to Highway 50. Road crossings are expected. A box culvert or multiple circular or squash pipes may be used depending on the grade of the road and vertical clearance. The flow will not be trapped behind the road crossing but will be allowed to flow under the road in the culvert. Figure 8 shows the preliminary cross sections for the Saliman Road Channel.

IV. EROSION AND SEDIMENT CONTROL

Storm drainage improvements shall incorporate water quality and erosion controls in accordance with the Nevada "Handbook of Best Management Practices," this division, and accepted engineering practice. Storm drainage leaving a development may not be of a quality that shall adversely affect downstream uses.

A SWPPP is required with the Grading and Drainage Plans for the on-site and off-site channel and drainage infrastructure. A SWPPP is also required with the construction of each block within the development.

The construction of this project is expected to be completed in phases. While specific development phase lines are unknown at this time, it is the intent of the Developer to construct the necessary drainage facilities for each phase and to only mass-grade a block or area has development is permitted and ready to proceed. The mass-grading and ground disturbance of large areas is in proposed or anticipated due to the derogatory impact on the natural and built environments of leaving large areas of disturbed land open and disturbed. Land disturbance will be limited to those areas necessary for immediate development.

Compliance with Division 13, Erosion and Sediment Control will be required for all phases of this development.

STAR Consulting

439 W. Plumb Lane Reno, NV 89509

Phone: (775) 352-4200 Email: erin@starconsultingnv.com

V. CONCLUSIONS

- All design and construction work shall be in compliance with Carson City Title 18 Division 13 Erosion / Sediment Control and 14 Storm Drainage policies and technical criteria.
- Storm drainage improvements shall incorporate water quality and erosion controls in accordance with the Nevada "Handbook of Best Management Practices," this division, and accepted engineering practice. Storm drainage leaving a development may not be of a quality that shall adversely affect downstream uses. (Division 14.1.5)
- Drainage improvements consist of curb and gutter, inlets and storm drains, culverts, bridges, swales, ditches, channels, detention areas, and other drainage facilities required to convey design storm runoff to the point of discharge. Drainage improvements are further defined as on-site (private) facilities that serve a specific development and are privately owned and maintained or off-site (public) facilities. Public and private drainage facilities shall be constructed in accordance with the requirements of this division. (Division 14.1.6)
- Floodplain management shall provide the guidance, conditions, and restrictions for development in floodplain areas while protecting the public's health, safety, welfare, and property from danger and damage. Development within the Federal Emergency Management Agency (FEMA) designated floodplains shall comply with CCMC, and requirements of the National Flood Insurance Program (NFIP). (Division 14.1.7)
- Easements shall be provided where necessary for access and maintenance of the storm drain system.
- Based on the floodplain analysis, it is recommended that a LOMR be pursued for removal of the floodway based on the existing topography. The LOMR would remove much of the Lompa Ranch from the burden of delineated floodway both upstream and downstream of the Highway 395. A CLOMR will then be pursued based on the design recommendations and conveyance infrastructure.
- A Technical Drainage Study in accordance with Division 14.9 shall be completed with or prior to the Drainage and Grading Improvement Plans for the drainage infrastructure.

1. Introduction and Executive Summary

This traffic impact study (TIS) supports a comprehensive plan amendment and rezoning application and identifies the transportation-related impacts of a proposed Lompa Ranch mixed-use development. The project is generally located north of 5th Street, south of William Street/US 50, east of Saliman Road and west of Airport Road in Carson City, Nevada. The project includes proposed commercial and residential land uses. The site location is shown in Exhibit 1.

Exhibit 1 Site Location

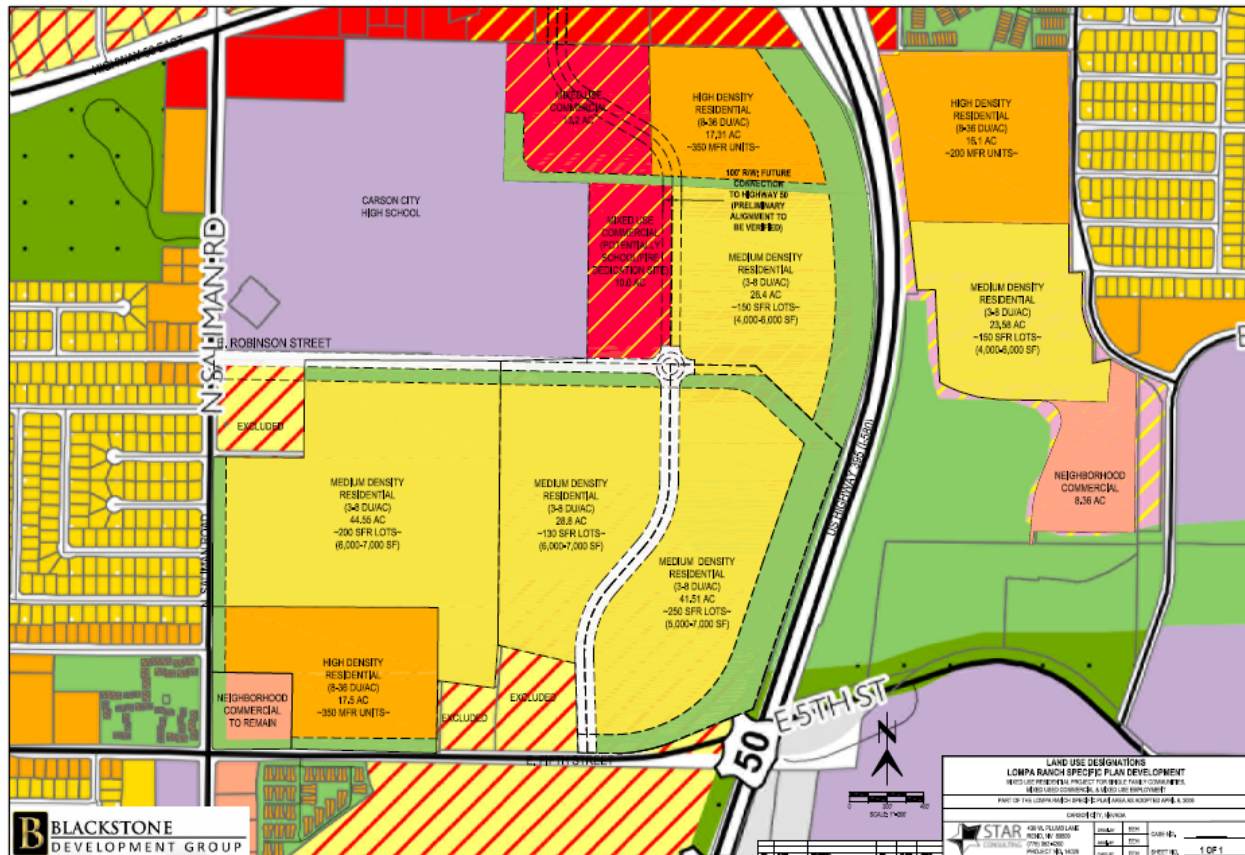

This report provides general guidance and preliminary recommendations for anticipating traffic impacts at the area intersections based on site trip estimates and at the driveway access locations. This traffic report is provided to support a rezoning submittal and should be updated once the specific land uses are developed in better detail.

Development Description

The project is within twelve areas, or parcels comprising a total of approximately 250 acres. A conceptual plan, showing the potential location of the land use types is provided in Exhibit 2. The specific locations of access points have not yet been determined. However, for the purposes of this analysis, we have assumed that there would be driveways on Saliman Road, 5th Street, Robinson Street, and Airport Road.

Exhibit 2 Land Use Concept Plan

A preliminary land use scenario is shown in Exhibit 3. The land use designations plan identifies twelve areas either designated for medium density residential (MDR), high density residential (HDR), mixed use commercial or neighborhood commercial. The proposed residential densities are shown to range from 3 to 8 dwelling units per acre for MDR and for HDR, 8 to 36 dwelling units per acre.

The number of single family and multi-family residential units is estimated to be over 1,780. There are 310,000 square feet of commercial uses, estimated by applying a floor area ratio (FAR) of 0.20 to the acreage of the parcels designated “mixed use commercial” and “neighborhood commercial”.

The current zoning is A (Agricultural). The developer is submitting a rezoning application for a Specific Plan authorizing the proposed land uses. Following Carson City’s approval of the Specific Plan, the project is tentatively expected to be built out by 2035, although it will likely be developed in phases. The project developer has indicated that the area bordered by Robinson Street to the north, the new “spine road” to the east, 5th Street to the south and Saliman Road to the west may be constructed as Phase 1 by the year 2020. The remainder of the project is expected to be built out by 2035.

Exhibit 3 Land Use Scenario

Parcel	Acreage	Land Use	DU/Acre or FAR		Estimated Units (DU or KSF)
			Low Range	High Range	
A	13.2	Mixed Use Commercial	0.20	0.20	115
B	17.31	High Density Residential	8	36	350
C	4.1	Neighborhood Commercial to Remain	0.20	0.20	36
D	44.55	Medium Density Residential	3	8	200
E	17.5	High Density Residential	8	36	350
F	10	Mixed Use Commercial	0.20	0.20	87
G	26.4	Medium Density Residential	3	8	150
H	41.51	Medium Density Residential	3	8	250
I	28.8	Medium Density Residential	3	8	130
J	16.1	High Density Residential	8	36	200
K	21.1	Medium Density Residential	3	8	150
L	8.3	Neighborhood Commercial	0.20	0.20	72
	248.87	Commercial KSF			310
		Residential Units			1,780

For Phase 1, the project is the project generates approximately 7,000 daily one-way trips, with about 460 trips during the AM peak hour and 680 during the PM peak hour.

For the build out phase (year 2035), the project generates approximately 27,600 daily one-way trips, with about 1,400 trips during the AM peak hour and 2,600 during the PM peak hour.

This TIS, along with other documents supporting the project’s rezoning application is subject to approval by Carson City. This study has been prepared in accordance with the Carson City’s Code of Ordinances section on the *Preparation of Traffic Impact Studies*. The project is a large scale development expected to generate over 1,000 trips during the peak hour.

Study Objectives

The specific study objectives are:

- Evaluate existing intersections near the project site including:
 - Saliman Road/William Street (Signalized)
 - Saliman Road/Robinson Street (Unsignalized)
 - Saliman Road/5th Street (Signalized)
 - William Street/Casino Road (Signalized)
 - Airport Road/5th Street
 - Airport Road/US 50
- Evaluate the impact of the project on the streets near the project:
 - Saliman Road

- William Street
 - Robinson Street
 - 5th Street
 - Airport Road
 - US 50
- Evaluate the effects the proposed development will have on pedestrian, bicycle and transit activity in the area.
 - Provide recommendations to mitigate (if necessary) undesirable traffic conditions that the project may create.

Principal Findings

This project is located on both sides of US 395, between Saliman Road and Airport Road and 5th Street and William Street.

Assuming a preliminary land use estimate, at build out the project will generate approximately:

- 1,400 morning peak hour trips,
- 2,600 evening peak hour trips,
- 27,600 weekday trips.

Approximately ¼ of these trips will be generated during Phase 1 of the project.

Based on the projected 2020 Phase 1 total volumes which include background traffic, the project will not require the widening of adjacent roadways. There is currently enough capacity on the study area roads to accommodate the addition of Phase 1 site traffic, as described in this report.

The following recommendations are based on the estimated trip generation from the concept plan provided in Exhibit 2 at Phase 1 and at Build Out. Design and construction should not be commenced based on these recommendations. Rather, they are provided as a basis for anticipating the cost of roadway infrastructure that may be needed to maintain acceptable levels of service on the adjacent roadways and intersections. At the development plan stage, with a better defined site plan, an updated traffic impact study should be conducted.

Phase 1 General Recommendations (Year 2020)

Existing Intersection

- Saliman/Robinson – Add westbound right turn lane. Robinson Street should be extended to intersect with a new north-south “spine road” within the project area and as shown in Exhibit 2. The spine road should extend north from a new intersection with 5th Street. Both Robinson Street and the Spine Road can be constructed with one through lane in each direction. For Phase 1, the spine road does not need to extend north of the Robinson Road extension.

New Intersections

- 5th Street/Spine Road – Construct a new intersection with an eastbound left, westbound right, southbound exclusive left and right lanes and signalization (if warranted). 5th Street will need to be widened at the intersection to accommodate the turn lanes. The location of the spine road should avoid the gradient on the eastbound approach to the US 395 overpass.

Build out General Recommendations (Year 2035)

Existing Intersections

- Saliman/William – Northbound dual lefts.
- Saliman/Robinson – Add northbound right turn lane and provide southbound dual lefts. This will require the widening of the east leg of Robinson Street to accept the two left turn lanes.
- Saliman/5th – Add a northbound right turn lane, and a westbound right turn lane (which may already be warranted without the project).
- William/Gold Dust Casino – Add a northbound right turn lane and, westbound dual lefts. This will require the widening of the south leg to accept a new lane. The south leg will continue to connect with the proposed north-south spine road.
- US 50/US 395 TI – No improvements.
- US 50/Airport – Provide northbound dual left turn lanes.
- Airport/5th – Add a westbound right turn lane.
- A new three- to four-leg intersection at Robinson Street/Spine Road should be constructed to provide a north leg at this intersection. This north leg is proposed to continue to its connection with the south leg of the William Street/Casino intersection. This will require widening the existing south leg of this intersection to a standard two to three lane cross-section.
- The preferred northern intersection of the spine road is at the existing signalized intersection on William Street serving access to the Gold Dust Casino. The south leg of this intersection should be widened to accommodate a potential additional westbound to southbound left turn lane at this intersection. The spine road is anticipated to carry approximately 12,000 vehicles per day at Build Out. This volume approaches the threshold for a four-lane roadway. Further analysis and continuing discussions with the property owners south of William Road will be required.

The traffic impact study indicates where turn lane warrants may be met based on traffic volume triggers. However, at some locations, right-of-way constraints, or other physical constraints may limit the ability to construct these turn lanes.

As indicated above, the recommendations for Phase 1 and Build Out should be anticipated, but not constructed. They should be subject to an updated analysis at the development plan stage when the site plan is more refined.

Traffic signals are not preliminarily warranted at Saliman/Robinson or at the new 5th Street/Spine Road intersection. However, at the development plan stage, another signal warrant analysis should be conducted at these intersections.

A preliminary queuing analysis for the Phase 1 condition indicate that there a few existing turn lanes that should be extended to accommodate 95% queues, as calculated in the capacity analysis. However, this should be reanalyzed at the development plan stage.

Sidewalks and bike lanes exist along several of the project roadways. Sidewalks and bike lanes should be constructed along the spine road and wherever improved connectivity is required.

Adequate sight distance meeting Carson City requirements at the project intersections must be provided.

All signs and pavement markings must conform to the *MUTCD* and Carson City requirements.

2. Proposed Development

Site Location and Site Plan

The project is in Carson City. It is along both sides of US 395, between Saliman Road and Airport Road, and between US 50 and 5th Street. The existing site is generally undeveloped.

Land Use and Intensity

Land uses are conceptual at this time, but may include single family residential units, multi-family residential units and commercial and retail uses. The site is now zoned A (Agricultural) and the developer is submitting a rezoning application for Specific Plan for the entire site. The projected land uses may generate over 27,600 trips per day at build out. The conceptual land uses are listed in Exhibit 3.

Site Access

Access is proposed from the existing roadway network along Saliman Road, 5th Street, William Street and Airport Road. A new north-south internal spine road is proposed to be constructed between 5th Street to US 50, via the existing Gold Dust Casino entrance road and intersecting US 50 at the existing signalized intersection. Robinson Road is also proposed to be extended to the east to intersection with the new spine road.

Access Geometrics

Access geometrics are not defined at this time, although driveway design and driveway spacing and corner clearance will be done based on Carson City standards. The conceptual plan does not identify driveway locations, but when the plan is refined, the number of access locations on the arterials and collectors should be limited to reduce potential conflicts. The location of the access locations should also be opposite existing driveways or at sufficient distances from nearby driveways to reduce crash potential associated with closely spaced access points. For the purposes of this study, we assumed two driveways on Saliman Road, two on Robinson Street, one on 5th Street, two on Airport Road and three on the new spine road (at build out).

Development Phasing and Timing

For the purposes of this analysis, the project is projected to be built out by 2035. This year aligns with the horizon year associated with the current Regional Transportation Plan. However, it is likely that the project will be phased. For the purpose of this analysis, we have assumed that approximately 25% of the total project will be occupied by the year 2020. Carson City Department of Development Services provided travel demand model data for existing (Year 2013), year 2020 and year 2035 conditions.

3. Study Area Conditions

Study Area

The study area includes the intersections of Saliman Road/William Street, Saliman Road/Robinson Avenue, Saliman Road/5th Street, William Street/US 50, William Street/Gold Dust Casino, US 50/Airport Road, 5th Street/Airport Road. These intersections are adjacent to the project site. The analysis also includes a planning level capacity analysis of the segments of Saliman Road, 5th Street, William Street, Airport Road and Robinson Street in the vicinity of the project site. Aerial photos provided by the Carson City GIS map are in Exhibit 4.

Exhibit 4 Intersection Aerial Photos

Saliman-5th Intersection

Saliman-Robinson Intersection

Saliman-William Intersection

William-Gold Dust Casino Intersection

US 395-US 395 Traffic Interchange

US 50-Airport Road

5th Street-Airport Road

Land Use

Existing Land Use

The project site is a working ranch with a residential building north of 5th Street and west of US 395. Most of the remaining project area is vacant.

Carson City High School is located on the northeast corner of the Saliman Road/Robinson Street intersection. High school buses are currently parked along the east side of the high school within the project area. The Gold Dust Casino and commercial and retail shops are north of the project area. There are residential areas east, west, and north of the project area. Another section of Lompa Ranch is south of 5th Street and is not part of this project.

Site Accessibility

Access is proposed from the existing roadway network along Saliman Road, 5th Street, William Street, Robinson Street and Airport Road.

4. Analysis of Existing Conditions

Physical Characteristics

Roadway Characteristics

Exhibit 5 is an inventory of the physical features and recorded volumes of the project area roadways.

Saliman Road is a north/south minor arterial with a posted speed limit of 35 mph. Between William Street and 5th Street, it has a five-lane cross-section with two through lanes in each direction and a two-way left turn lane. In the vicinity of the project, it has bike lanes and sidewalks on each side.

William Street is an urban east/west minor arterial with a posted speed limit of 40 mph. East of Saliman Street, it has a five-lane cross-section with two through lanes in each direction and a two-way left turn lane. As it approaches US 395, prior to the Gold Dust Casino, it transitions to a six-lane road with a raised median, and continues with this cross section to the east side of US 395. In the vicinity of the project, it has bike lanes on each side. On the east side of US 395 it becomes US Highway 50.

Robinson Street is a two-lane local road on both sides of Saliman Road. On the west side, it provides access to a residential area and has a posted speed limit of 25 mph. On the east side of Saliman Road, it is the primary access to Carson High School, and has a posted speed limit of 15 mph. It extends east into the Lompa Ranch area and terminates approximately 2,000 feet from Saliman Road.

US 50 continues from William Street as an urban east/west principal arterial with a posted speed limit of 40 mph. It has a six-lane cross-section with a raised median for about 900 feet from its interchange with US 395. It then transitions to a five-lane cross section with a two-way left turn lane. In the vicinity of the project, it has bike lanes on each side.

Airport Road is a residential collector near US 50 with a speed limit of 25 mph. It has 2 lanes with sidewalks. It serves retail and commercial services near US 50 and continues through a residential neighborhood to Butti Way. South of Butti Way to its intersection with 5th Street, the speed limit is 35 mph. It provides access to Carson City municipal services in the vicinity of Butti Lane.

5th Street is a two-lane east-west collector that runs along the south border of the project area. It has a speed limit of 40 mph and has bike lanes and sidewalks.

Transit Service

Jump Around Carson (JAC) is the public transit system in Carson City. Routes 2A and 2B (North Town, Clockwise and Counterclockwise West/East Carson Area) provide service on Airport Road south of US 50.

Bicycle/Pedestrian Facilities

There are several roads with striped bike lanes in the vicinity of the project, including Saliman Road, William Street, US 50 and 5th Street. Saliman Road, Airport Road, 5th Street and Robinson Street all have sidewalks on all or part of their segments.

Traffic Control Devices

The study area intersections of Saliman Road/William Street, Saliman Road/5th Street, William Street/Casino, William Street/US 50/US 395 are signal controlled. Saliman Road/Robinson Street and 5th Street/Airport Road are stop sign controlled intersections.

Exhibit 5 Roadway Inventory – Existing Conditions

Roadway Segment	Lanes	Recorded ADT	LOS D Threshold	Speed Limit	Bike Route	JAC Bus Route	Sidewalks
Saliman Road: 5th Street to William Street	5	6,100	29,160	35	Yes	No	Yes
William Street: Saliman Road to US 395	5	22,500	35,820	40	Yes	No	No
US 50: US 395 to Airport Road	5	26,500	39,800	40	Yes	No	No
Airport Road: US 50 to Butti Way	2	4,600	14,800	25	No	Yes	Yes
Airport Road: Butti Way to 5th Street	2	2,500	11,840	35	No	No	No
5th Street: Saliman Road to Airport road	2	5,900	17,700	40	Yes	No	Yes
Robinson Street: East of Saliman Road	2	<2,000	11,840	15	No	No	Yes
Robinson Street: West of Saliman Road	2	<2,000	11,840	25	No	No	Yes

ADTs from *State of Nevada Department of Transportation*

Annual Average Daily Traffic Count Stations

LOS D Thresholds from *Florida Department of Transportation Generalized Annual Average Daily Volumes for Florida's Urbanized Areas*

Traffic Volumes

The State of Nevada Department of Transportation publishes annual average daily traffic (ADT) counts on their website. Year 2014 counts for roadway segments in the vicinity of the project area are shown in Exhibit 5, Roadway Inventory. The ADTs on all roads are well below their Level of Service D capacity thresholds. Segment performance has been estimated using the planning methods contained in the Florida Department of Transportation Level of Service Handbook¹. Segment performance is often overshadowed when intersection performance when signals are closely spaced.

Carson City staff provided am and pm peak hour traffic demand model counts for the study area signalized intersections. Peak hour turning movement counts were collected at the intersections of Saliman Road/Robinson Street, William Street/Casino Road and 5th Street/Airport Road the week of November 30th.

Peak hour traffic data are shown in Exhibit 6.

Level of Service

Level of service is a qualitative description of how well a roadway or intersection operates under prevailing traffic conditions based on traffic volumes, capacity and intersection delay. A grading system of A through F, similar to academic grades, is utilized. LOS A is free-flowing traffic, whereas LOS F is forced flow and extreme congestion. LOS D is generally accepted as the standard in urbanized areas although LOS E is sometimes accepted in more congested areas.

Roadway Performance

Exhibit 5, Roadway Inventory, provides a summary of ADT, current roadway capacity, and whether the segments operate under or over the LOS D capacity for the roadway.

¹ Florida Department of Transportation Generalized Annual Average Daily Volumes for Urbanized areas contained in *Quality / Level of Service Handbook, 2012*

5. Projected Traffic

Site Traffic Forecasting

Trip Generation

The future traffic from the project is estimated using the trip rates contained in the Institute of Traffic Engineers' *Trip Generation Handbook*, 9th Edition. The number of trips generated is the mathematical product of land use intensity (building square footage, number of dwelling units, etc.) and the trip generation rate. The result is the total number of one-way trips (not round trips) expected to be generated by the project. These trips represent the number of vehicles estimated to enter and leave the project.

The densities of the land uses are conceptual at this time, but the trip generation for conservative numbers of homes, apartments and commercial areas was estimated.

We applied average trip rates from the *Trip Generation Handbook* to estimate trip generation for the residential (single family dwelling units for the MDR and apartments for the HDR) and commercial (shopping center) uses. Exhibit 8 shows the trip rates and estimated trip generation. Based on the average trip rates for the project land uses, and an estimate of the residential lots and units by the developer, the project generates approximately 7,000 daily trips, 460 AM peak hour trips and 680 PM peak hour trips in Phase 1. At build out, the project is estimated to generate 27,600 daily one-way trips, 1,400 AM peak hour trips and 2,600 PM peak hour trips.

The *Trip Generation Handbook* also provides guidance on pass-by and diverted trip percentages for several land uses. The *Trip Generation Handbook* includes pm peak hour pass-by rates for the land use, Shopping Center. However due to the conceptual nature of the land uses, we did not consider these reductions.

Trip Distribution and Assignment

Trip distribution and assignment is somewhat premature given the conceptual level of the project. The completion of the southern section of US 395 will also change traffic patterns in the project vicinity. However, an estimated distribution of site trips is illustrated in Exhibit 9. Site trips would be distributed to the adjacent roads and beyond, including US Highway 395.

The number of site trips added to the adjacent and nearby roadway system would be dependent on the densities of the residential and commercial parcels. These would be further refined at the development plan stage.

We assigned the daily site traffic as shown in Exhibits 10 (Phase 1) and Exhibit 11 (Phase 2). The site trips at the project driveways and the off-site intersections are shown in Exhibits 12 and 13 for Phase 1 only. We did not assign peak hour trips at build out because it would be premature to do so at this time. This should be done at the development plan stage.

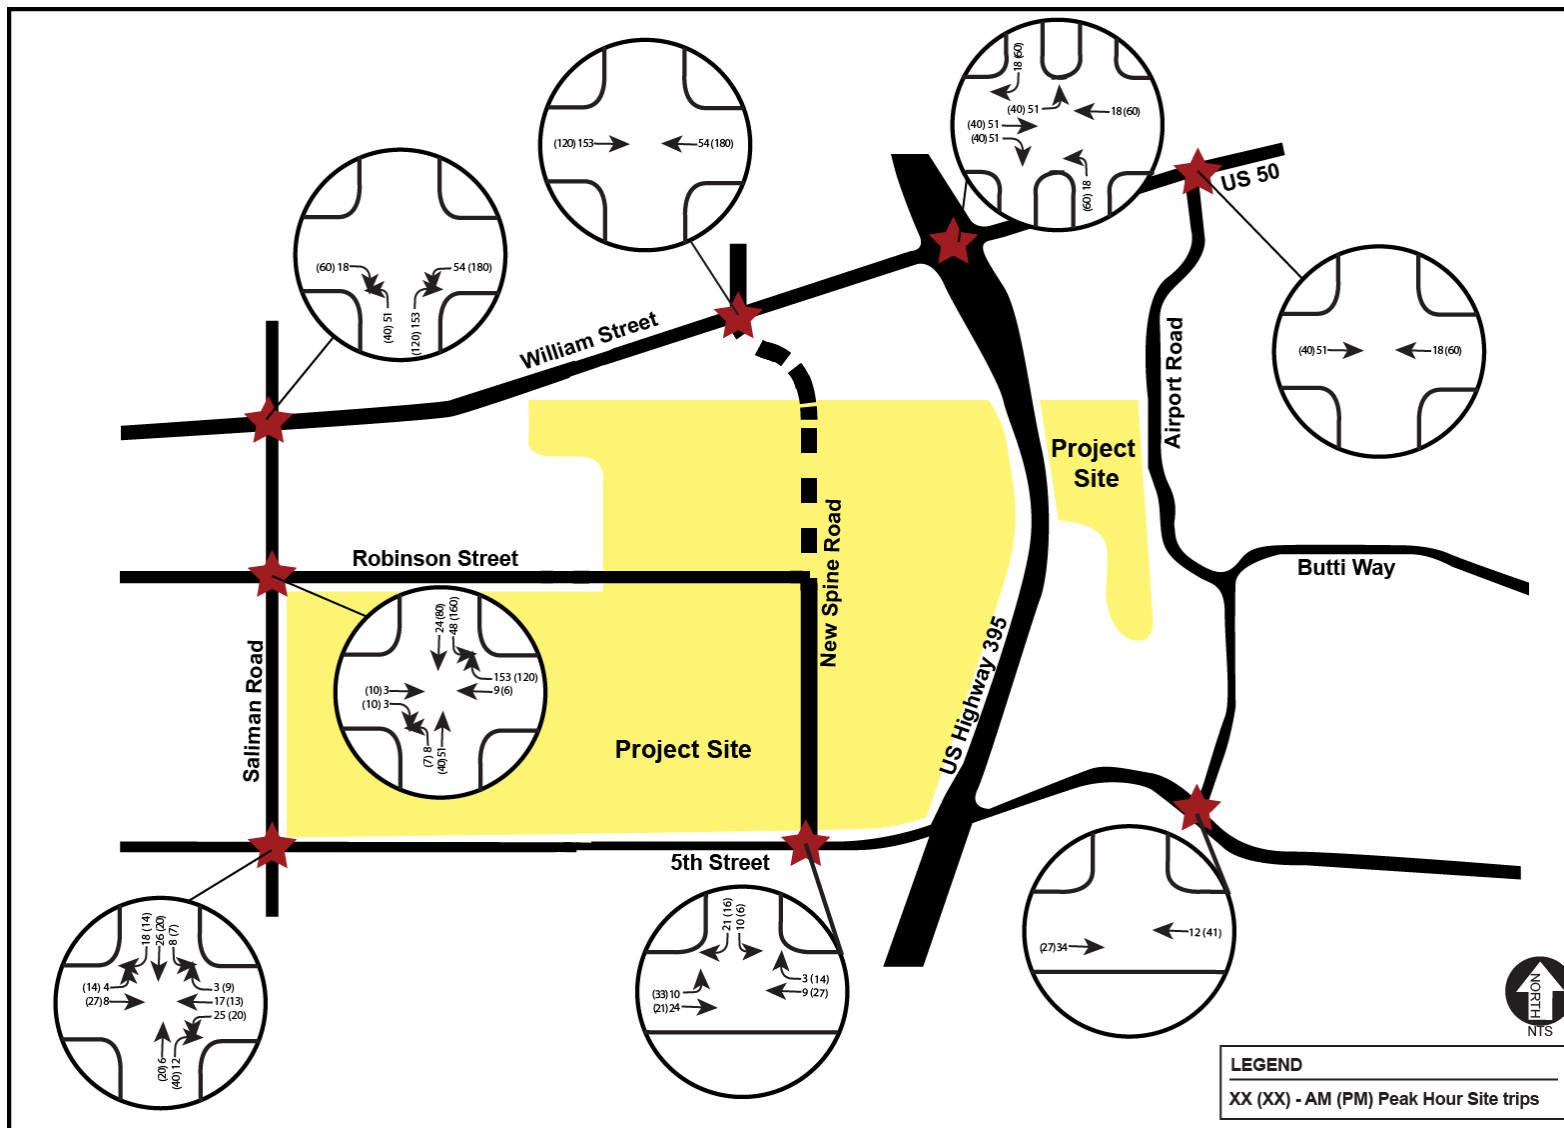

Exhibit 13 Site Trips – Project Off-Site Intersections (Phase 1)

Non-Site Traffic Forecasting

Projections of Non-Site Traffic

The Carson Area Metropolitan Planning Organization's (CAMPO) travel demand model projects traffic volumes on city streets and intersections for the horizon years of 2020 and 2035. This model did not include the number of residential and commercial units proposed for this Lompa Ranch project, although a moderate increase in residential, and non-residential units was included in the year 2020 and year 2035 forecasts.

The demographic data estimates for the CAMPO model include a modest growth of about 45 new single family households and 31 new multi-family residential units in the Lompa Ranch study area by the year 2020². A total of 120 and 83 new single-family and multi-family units are projected in the CAMPO model within the project study area by the year 2035. The CAMPO model includes two-thousand (2,000) new square feet of retail development, and a total of 5,000 new square feet of retail development by the year 2035.

Comparatively for this project, the conservative estimate of residential units, both single family and apartments, is almost 1,800. The projected commercial use in the project area is approximately 310,000 square feet. For the purposes of this report, we have reported the 2020 travel demand model volumes at the project intersections assuming that the modest growth would still occur for these years in the absence of this project. Exhibit 14 shows the future turning movement intersection counts under the no-project condition for the Phase 1 year 2020.

Total Traffic

Site traffic volumes associated with the Lompa Ranch Development were added to the background traffic. Because the proportion of residential and commercial units is small in the CAMPO model within the project area to the proposed number of units for this project, we did not subtract the CAMPO model residential and commercial units from the projected residential and non-residential units.

The resulting total peak hour turning volumes at the project intersections are illustrated in Exhibit 15.

² The area includes the CAMPO RTP transportation analysis zones (TAZ) 67, 138, 139, 140 and 141.

Exhibit 14 2020 Peak Hour Intersection Volumes – Without Project

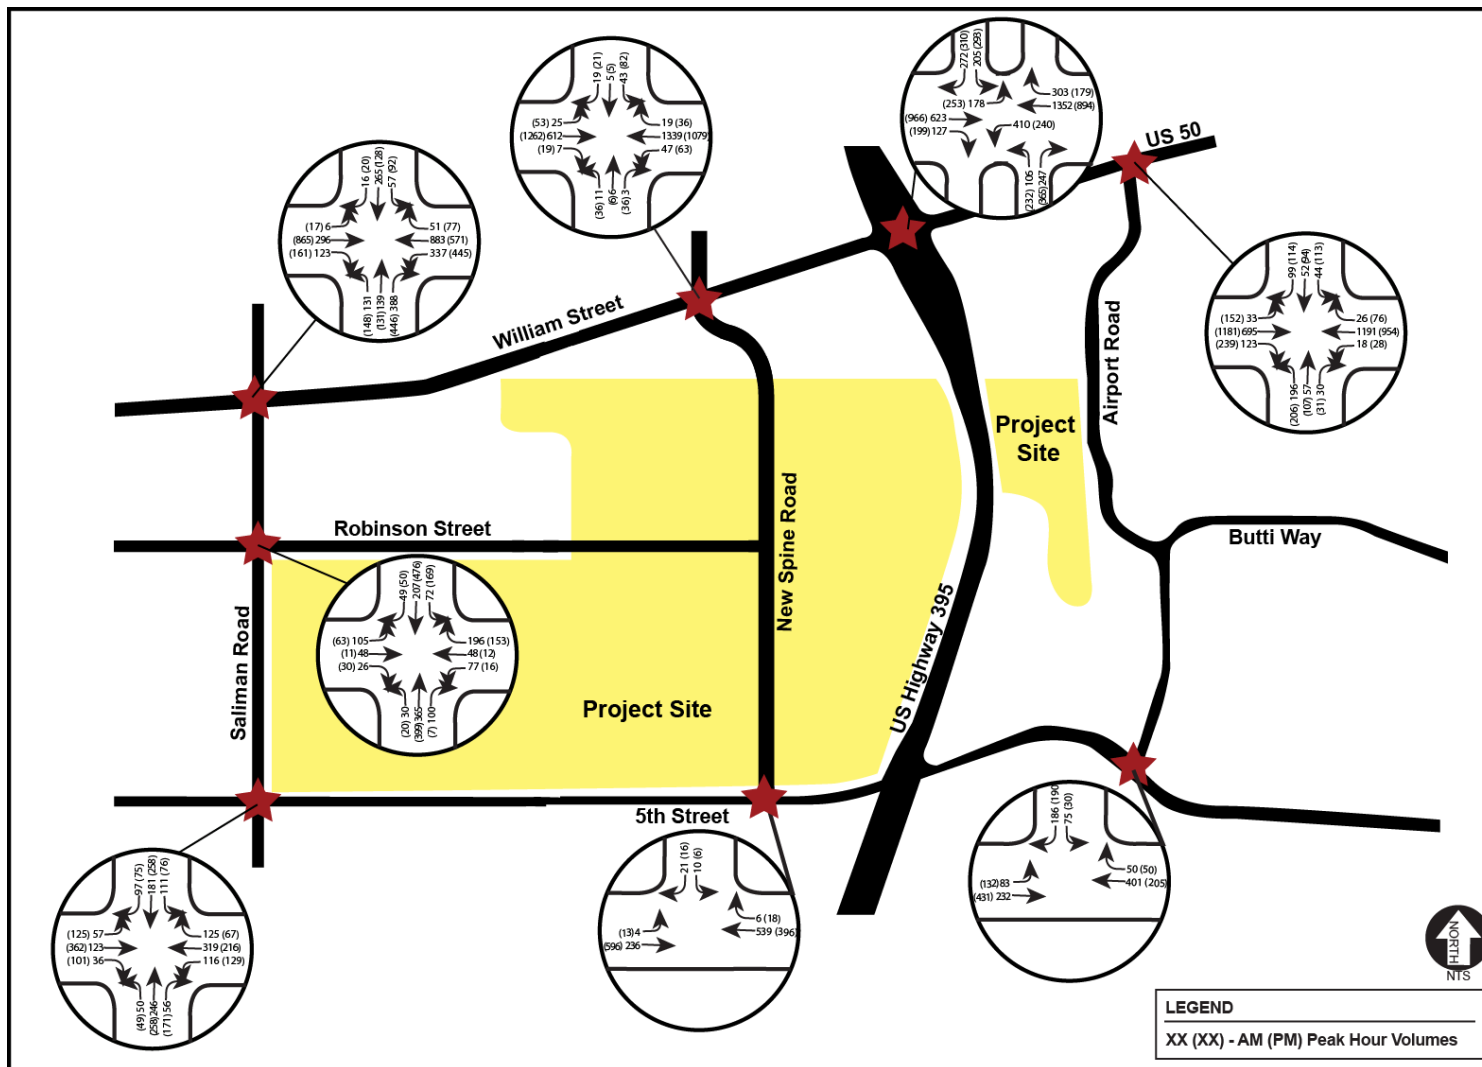

Exhibit 15 2020 With Project Peak Hour Volumes

6. Traffic and Improvement Analysis

Level of Service Analysis

Roadway Performance

Exhibit 16 summarizes the new ADT and daily volume capacity (LOS D) of the roadway segment with and without the project in 2020 and 2035. The year 2020 with project volumes include the addition of Phase 1 site trips. The year 2035 With Project volumes include the site trips at build out. The build out daily site trips were distributed to the adjacent roadways, and assumes that the spine road is fully constructed between William Street and 5th Street. As such, the segment with the highest site trip volume is William Street east of the spine road.

The table show that all roads, with the exception of US 50, will operate at LOS D or better based on the FDOT LOS D thresholds. The west section of US 50 from US 395 to Airport Road is a six lane road that transitions to a four-lane road about halfway to Airport Road. The four-lane section is expected to exceed the LOS D threshold (35,820 vehicles per day) for a four-lane roadway by the year 2020 even without the project.

Exhibit 16 Future Roadway Volumes and Capacity

Roadway Segment	LOS D Threshold	2020 Site Trips	2035 Site Trips	2020 ADT (No Project)	2020 ADT (With Project)	2035 ADT (No Project)	2035 ADT (With Project)

Robinson Street: West of Saliman Road	11,840	700	1440	2,200	2,900	2,600	4,040

ADTs from *State of Nevada Department of Transportation Annual Average Daily Traffic Count Stations*

LOS D Thresholds from *Florida Department of Transportation (FDOT) Generalized Annual Average Daily Volumes for Florida's Urbanized Areas*

Intersection Performance

For the year 2020, we analyzed the project intersections with and without project trips. For the “without project” scenario, we included the available traffic volumes from the CAMPO travel demand model. For the intersections for which there are no modeled volumes, (Saliman Road/Robinson Street, William Street/Gold Dust Casino and 5th Street/Airport Road), we reviewed both existing data at the intersections and the 2020 model volumes at the nearby intersections to estimate the turning movement volumes.

The results for the peak hour intersection analysis are provided in Exhibit 17. Although we assigned site traffic to a number of potential driveway locations on Robinson, Saliman, 5th Street and Airport Road, we did not analyze conditions at the project driveways since the number and location of the driveways are not yet defined.

STAR Consulting

Phone: (775) 352-4200

Email: erin@starconsultingnv.com

As shown in the summary tables all intersections will operate at LOS D or better with the Phase 1 project traffic added through 2020.

Because the year 2035 site traffic projections for the study area intersections would be speculative at best, we did not conduct a similar intersection analysis for this horizon year.

Traffic Safety

Sight Distance

All project driveways and intersections should be designed to allow for acceptable sight distance. Sight distance is typically shown on the development plan and improvement drawings.

Turn Lane Analysis

A turn lane “warrant” is a justification for constructing a turn lane, based on traffic volumes at an intersection. Turn lanes are warranted based on these criteria when the peak hour turn lane volume exceeds a trigger based on the two-way daily volume (ADT, or Average Daily Traffic as indicated in the table) on the roadway. Carson City does not have a turn lane warrant policy or standard.

There are many examples of turn lane warrants. The Idaho Department of Transportation Traffic Manual provides examples and guidelines for turn lane warrants. Exhibits 18 and 19 show the warrant graph for right and left turn lane warrants. Exhibit 18 illustrates how a condition where there are eight right turns on a road with 180 vehicles per lane would warrant a right turn lane if the posted speed limit was 45 mph or higher, but would not be warranted if the posted speed limit was 40 mph or lower. Exhibit 19 shows a similar example for a left turn lane warrant.

Exhibit 18 Right Turn Lane Warrant Criteria

Source: Idaho DOT

Exhibit 19 Left Turn Lane Warrant Criteria

Source: Idaho DOT

These examples indicate that a conservative (small) number of turns may warrant the provision of a turn lane. If applied in Carson City, there are several locations where a turn lane would be warranted today, where there is no turn lane, based on existing modeled volumes. For example, the southbound PM peak hour right turn volume at the Saliman/William intersection is 34 vehicles per hour. This exceeds the warrant threshold for a right turn lane by four vehicles per hour. However, the City should carefully consider the application of these or any warrants as there are other factors that may not justify the provision of a turn lane, at a particular time.

Nevertheless, the impact of the project on the City's roadway system should require the provision of turn lanes at certain intersections. Turn lanes should be considered at the following intersections at Phase 1 and at Build Out:

Year 2020 – Phase 1

Existing Intersection

Saliman/Robinson – Westbound Right

New Intersections

5th Street/Spine Road – Eastbound left, Westbound Right, Southbound Exclusive Left and Right Lanes

Robinson Street should be extended to intersect with a new north-south “spine road” within the project area and as shown in Exhibit 2. The spine road should extend north from a new intersection with 5th

Street. Both the Robinson Street extension and the Spine Road can be constructed with one through lane in each direction.

Year 2035 – Build Out

Existing Intersections

Saliman/William – NB Dual Lefts

Saliman/Robinson – WB Right Turn Lane, NB Right Turn Lane, SB Dual Lefts

Saliman/5th – NB Right Turn Lane (a WB right turn lane may already be warranted).

William/Gold Dust Casino – NB Right Turn Lane, WB Dual Lefts (requiring the widening of the south leg to accept a new lane)

US 50/US 395 TI – No improvements

US 50/Airport – NB Dual Lefts

Airport/5th – WB Right Turn Lane

The traffic impact study indicates where turn lane warrants may be met based on traffic volume triggers. However, at some locations, right-of-way constraints, or other physical constraints may limit the ability to construct these turn lanes.

A new three- to four-leg intersection at Robinson Street/Spine Road will be constructed to provide a north leg at this intersection. This north leg is proposed to continue to its connection with the south leg of the William Street/Casino intersection. This will require widening the existing south leg of this intersection to a standard two to three lane cross-section.

Pedestrian, Bicycle, and Transit Considerations

The project must consider the connectivity of existing and future roads and paths. Carson City's *Complete Streets Policy* provides guidance associated with project design and planning for multi-modal roads.

As indicated in the *Complete Streets Policy*,

“Projects should be implemented so as to establish connectivity within the existing street network. Developing connections to existing pedestrian and bicycle facilities where ever possible is encouraged, and will improve the overall safety and accessibility to those that are dependent on those modes. Complete Streets concepts need to be applied to private developments as well in an effort to eliminate “islands” with no connection to the outside network. The private sector must be held to City standards and to the essence of Complete Streets concepts for proposed developments to ensure that the intent of this policy carries through approved site plans and the entire development process.”

While most surrounding streets have sidewalks and/or bike paths, the design of the internal streets, such as the extension of Robinson Street and the proposed north/south spine road should include these facilities and related amenities to encourage non-motor vehicle use within the development. The provision of open space, parks and other recreational areas in Lompa Ranch would also encourage pedestrian and bicycle activity in the area.

Discussions should be held with JAC transit services to determine whether transit in the development should be provided.

Speed Considerations

The City must determine the posted speed for Robinson Street if it is extended to the east, as well as the Spine Road.

Other Considerations

Signal Spacing

The recommended minimum signal spacing is ¼ mile. This can be accommodated on Saliman Street if a signal is found to be warranted at Saliman Street/Robinson Street. The location of the spine road connection on 5th Street should also be at least ¼ mile from Saliman Road.

Corner and Driveway Clearances

Driveways should be located either across from existing streets or with at least 150 feet of offset. Driveways on collectors and arterials should also be located outside of the functional area of intersection turn lanes (beyond the storage length and taper).

Queuing Analysis

Storage lengths should be extended if existing or projected traffic volumes at intersections queue beyond the calculated 95th percentile queue length, so that queuing vehicles do not back up and encroach into other lanes.

The Synchro software estimates queue lengths for all intersection turning movements. Exhibit 20 shows the existing storage lengths for turn lanes at the project area off-site intersections and indicates whether the calculated 95th percentile queue lengths exceed the physical storage lengths of the turn lanes. The analysis was done for the year 2020 "With Project" conditions. These estimates should not be used for design purposes. A reassessment of the queue lengths should be conducted at the development plan stage.

Traffic Control Needs

A preliminary traffic signal warrant analysis was conducted for the intersections of Saliman Road/Robinson Road and 5th Street/Spine Road. This analysis applies the Oregon DOT Preliminary Traffic Signal Warrant analysis³ procedures. The highest volumes are projected to be during the pm peak hour. We applied a peak hour “K” factor of 0.09 for the peak hour in the calculation of the ADT from the future peak hour volumes to estimate the target ADT for the analysis.

As indicated in Exhibits 21 and 22, signalization may not be warranted at both intersections. However, these analyses should be updated at the development plan stage.

It should be noted that at the Saliman Road/Robinson Road, the existing weekday peak hour may occur between 2 and 3 pm because Carson High School classes end at 2:05. However, site traffic volumes associated with the Lompa Ranch project may change the peak hour at this location. It should be noted that the signal warrant analysis conducted was preliminary, and a full warrant analysis should be conducted as recommended by the Manual of Uniform Traffic Control Devices at the Development Plan stage. This analysis will require traffic data for the eight highest hours of the day at the intersection (which would likely include the school peak hour). There are other warrants, such as Peak Hour Warrant (Warrant #3), Pedestrian Volume Warrant (Warrant #4), and School Crossing Warrant (Warrant #5) that should be considered.

³ This analysis is based on MUTCD signal warrant methods. It is conducted to screen potential intersections for a more rigorous signal warrant study, based on daily traffic volumes.

7. Conclusions and Recommendations

1. This project is located on both sides of US 395, between Saliman Road and Airport Road and 5th Street and William Street.
2. Assuming a preliminary land use estimate, at build out the project will generate approximately:
 - 1,400 morning peak hour trips,
 - 2,600 evening peak hour trips,
 - 27,600 weekday trips.

Approximately ¼ of these trips will be generated during Phase 1 of the project.

3. Based on the projected 2020 Phase 1 total volumes which include background traffic, the project will not require the widening of adjacent roadways. There is currently enough capacity on the study area roads to accommodate the addition of Phase 1 site traffic, as described in this report.
4. The following recommendations are based on the estimated trip generation from the concept plan provided in Exhibit 2 at Phase 1 and at Build Out. Design and construction should not be commenced based on these recommendations. Rather, they are provided as a basis for anticipating the cost of roadway infrastructure that may be needed to maintain acceptable levels of service on the adjacent roadways and intersections. At the development plan stage, with a better defined site plan, an updated traffic impact study should be conducted.

Phase 1 General Recommendations (Year 2020)

Existing Intersection

- Saliman/Robinson – Add westbound right turn lane. Robinson Street should be extended to intersect with a new north-south “spine road” within the project area and as shown in Exhibit 2. The spine road should extend north from a new intersection with 5th Street. Both Robinson Street and the Spine Road can be constructed with one through lane in each direction. For Phase 1, the spine road does not need to extend north of the Robinson Road extension.

New Intersections

- 5th Street/Spine Road – Construct a new intersection with an eastbound left, westbound right, southbound exclusive left and right lanes and signalization (if warranted). 5th Street will need to be widened at the intersection to accommodate the turn lanes. The location of the spine road should avoid the gradient on the eastbound approach to the US 395 overpass.

Build out General Recommendations (Year 2035)

Existing Intersections

- Saliman/William – Northbound dual lefts.
- Saliman/Robinson – Add northbound right turn lane and provide southbound dual lefts. This will require the widening of the east leg of Robinson Street to accept the two left turn lanes.
- Saliman/5th – Add a northbound right turn lane, and a westbound right turn lane (which may already be warranted without the project).

- William/Gold Dust Casino – Add a northbound right turn lane and, westbound dual lefts. This will require the widening of the south leg to accept a new lane. The south leg will continue to connect with the proposed north-south spine road.
- US 50/US 395 TI – No improvements.
- US 50/Airport – Provide northbound dual left turn lanes.
- Airport/5th – Add a westbound right turn lane.
- A new three- to four-leg intersection at Robinson Street/Spine Road should be constructed to provide a north leg at this intersection. This north leg is proposed to continue to its connection with the south leg of the William Street/Casino intersection. This will require widening the existing south leg of this intersection to a standard two to three lane cross-section.

The traffic impact study indicates where turn lane warrants may be met based on traffic volume triggers. However, at some locations, right-of-way constraints, or other physical constraints may limit the ability to construct these turn lanes.

5. The preferred northern intersection of the spine road is at the existing signalized intersection on William Street serving access to the Gold Dust Casino. The south leg of this intersection should be widened to accommodate a potential additional westbound to southbound left turn lane at this intersection. The spine road is anticipated to carry approximately 12,000 vehicles per day at Build Out. This volume approaches the threshold for a four-lane roadway. Further analysis and continuing discussions with the property owners south of William Road will be required.
6. Traffic signals are not preliminarily warranted at Saliman/Robinson or at the new 5th Street/Spine Road intersection. However, at the development plan stage, another signal warrant analysis following full MUTCD signal warranting procedures should be conducted at these intersections.
7. A preliminary queuing analysis for the Phase 1 condition indicate that there a few existing turn lanes that should be extended to accommodate 95% queues, as calculated in the capacity analysis. However, this should be reanalyzed at the development plan stage.
8. Sidewalks and bike lanes exist along several of the project roadways. Sidewalks and bike lanes should be constructed along the spine road and wherever improved connectivity is required.
9. Adequate sight distance meeting Carson City requirements at the project intersections must be provided.
10. All signs and pavement markings must conform to the *MUTCD* and Carson City requirements.

PURPOSE OF REPORT AND STUDY OBJECTIVES

The purpose of this report is to identify potential areas that meet the Federal 404 definition of wetlands. Following wetland identification by the Army Corps of Engineers, designated land use intensities shall be developed outside of the wetlands.

SECTION 404 PERMITTING (U.S. ENVIRONMENTAL PROTECTION AGENCY)

Section 404 of the Clean Water Act (CWA) establishes a program to regulate the discharge of dredged or fill material into waters of the United States, including wetlands. Activities in waters of the United States regulated under this program include fill for development, water resource projects (such as dams and levees), infrastructure development (such as highways and airports) and mining projects. Section 404 requires a permit before dredged or fill material may be discharged into waters of the United States, unless the activity is exempt from Section 404 regulation (e.g. certain farming and forestry activities). The basic premise of the program is that no discharge of dredged or fill material may be permitted if: (1) a practicable alternative exists that is less damaging to the aquatic environment or (2) the nation's waters would be significantly degraded. In other words, when you apply for a permit, you must first show that steps have been taken to avoid impacts to wetlands, streams and other aquatic resources; that potential impacts have been minimized; and that compensation will be provided for all remaining unavoidable impacts. Proposed activities are regulated through a permit review process. An individual permit is required for potentially significant impacts. Individual permits are reviewed by the U.S. Army Corps of Engineers, which evaluates applications under a public interest review, as well as the environmental criteria set forth in the CWA Section 404(b)(1) Guidelines, regulations promulgated by EPA. However, for most discharges that will have only minimal adverse effects, a general permit may be suitable. General permits are issued on a nationwide, regional, or State basis for particular categories of activities. The general permit process eliminates individual review and allows certain activities to proceed with little or no delay, provided that the general or specific conditions for the general permit are met. For example, minor road activities, utility line backfill, and bedding are activities that can be considered for a general permit. States also have a role in Section 404 decisions, through State program general permits, water quality certification, or program assumption.

PROJECT BACKGROUND

In June 1994 a Proposed Jurisdictional Delineation Report was prepared for the Carson City Highway 395 Bypass (94-031-03 and 94-031-07) by Resource Concepts. In July 1997 an Addendum was prepared (199400539). Per NDOT, both report were accepted by the Corps.

In June of 1998 WRC Engineering prepared a US 395 Bypass Section 404 Alternatives Development and Evaluation Report (WRC File 1879/42). Figure 9 of this report is shown on the following pages of this memo as Figure 1.

In February of 1999 Palmer and Lauder Engineers prepared a Development Constraint Analysis of the Lompa Ranch (Job No. 990101). The following excerpt is taken from this report:

WETLANDS / WATERS OF THE US: The U.S. Army Corp of Engineers (COE) regulates Section 404 of the Clean Water Act, which requires approval prior to discharging dredged or fill material into the Waters of the U.S. Waters of the U.S. include surface waters such as all navigable waters and their tributaries, all interstate waters and their tributaries, all wetlands adjacent to these waters, and all impoundments of these waters.

In conjunction with the design for the U.S. 395 Bypass, a jurisdictional delineation of wetlands and other Waters of the US. were performed on a portion of the Lompa Ranch by Resource Concepts, Inc.; in June 1994. An addendum to that report was issued in July 1997. The drawing illustrating the study area, waters of the U.S. and the wetland boundaries is included herein, along with the text of both reports. NDOT staff has advised us that both delineations have been verified by the Corp of Engineers.

Waters of the U.S. have been identified in several locations traversing Parcel A. Additionally; they have been identified on both Parcels B and C, near the linear ditch. A total of approximately 25 acres of wetlands were delineated on the Lompa Ranch property. It is important to note, however, that the delineation only extended as far as the project limits for the U.S. Highway 395 Bypass. The western 2,000 feet of the ranch was not included. While we are not aware of any specific areas that could be delineated as Waters of the U.S., including wetlands, an effort should be made in the future to determine if any exist.

STAR Consulting

Phone: (775) 352-4200 Email: erin@starconsultingnv.com

Development of or near "Waters of the US" requires either a permit or determination that a permit is not required from the COE. Permits are a means to assure that a conveyance is provided. With respect to the wetlands, they can be avoided, impacted minimally, or mitigated. Mitigation typically requires creation of new wetland, of equal biological value to that which was destroyed, at a two-to-one ratio. Because of the expense of developing new wetland and the development costs associated with the existing wetland, we have assumed that the wetlands would be avoided and/or subject to minimal impact. Therefore, these lands would not be available for development.

Based on aerial photography, it appears that the mitigation required for disturbance of the wetlands during the Highway 395 Bypass project were completed east of the highway and north of 5th Street. Recent topography shows this area as being a collector basin for numerous watercourses in the vicinity as well as an area subject to backwater ponding.

CONCLUSION

The construction of Highway 395 and the associated drainage channels has impacted the natural waterways and wetlands in the area. These improvements have reduced or eliminated much of the previously flooded area in the immediate vicinity. Following the LOMR acceptance by FEMA, it is recommended that an updated Delineation be completed by the Corps for Lompa Ranch.

Recommended Actions:

1. Blackstone Development Group is currently working with Resource Concept Inc to conduct an updated Wetland Jurisdictional Delineation in early spring (when weather allows).
2. Engage a resource management or environmental engineering firm to study the effects of the constructed channel and highway improvements on the previously mapped waterways and wetlands and coordinate those results with the Corps. In discussion, Resource Concepts believes the wetlands will be less than the approved JD's in 1997 and 1998 due to construction of the existing highway and channel improvements.
3. Following wetland identification by the Army Corps of Engineers, designated land use intensities shall be developed outside of the wetlands.

1. Introduction and Executive Summary

This Sewer and Water Demands Technical Engineering Memo supports a comprehensive plan amendment and rezoning application and identifies the utility-related impacts of a proposed Lompa Ranch mixed-use development. The project is generally located north of 5th Street, south of William Street/US 50, east of Saliman Road and west of Airport Road in Carson City, Nevada. The project includes proposed commercial and residential land uses. The site location is shown in Exhibit 1.

Exhibit 1 Site Location

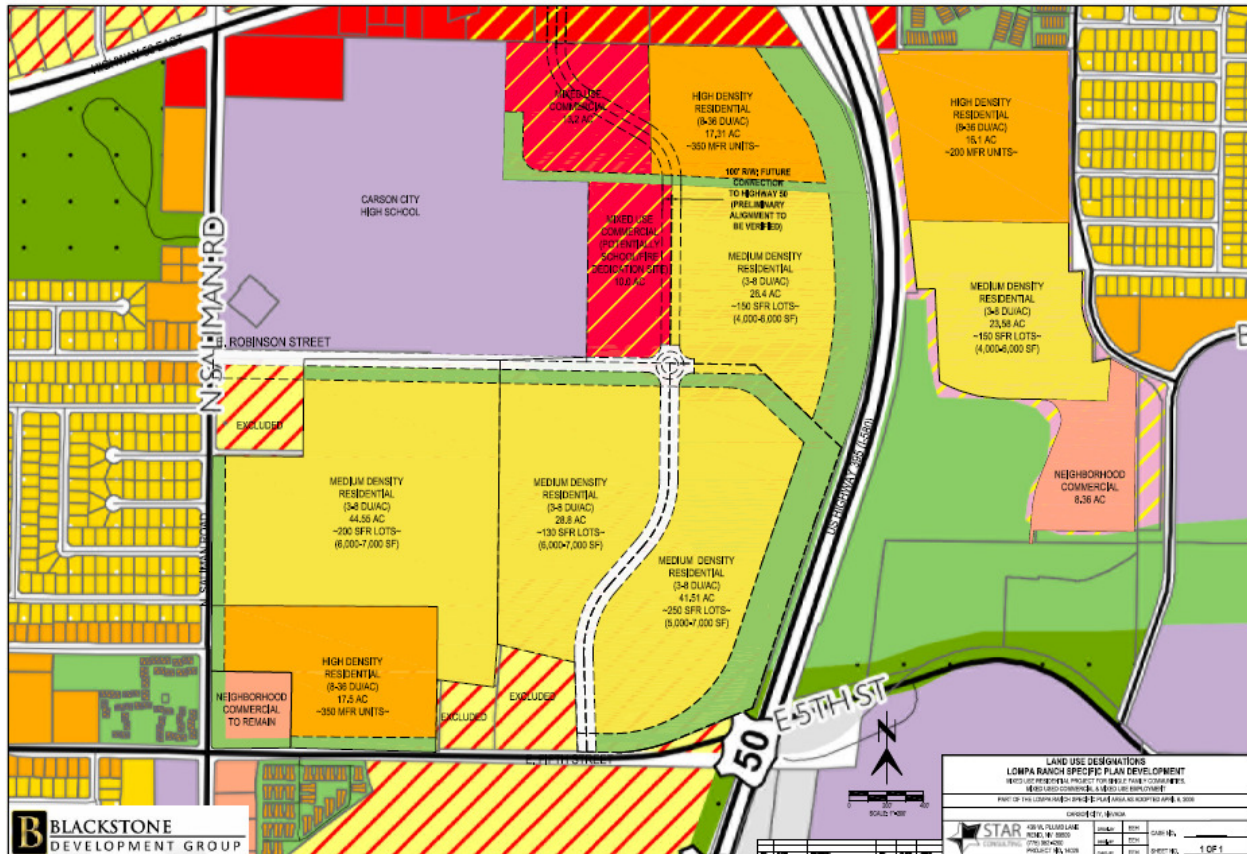

This memo provides general guidance and preliminary recommendations for anticipating sewer and water demands from the project.

Development Description

The project is within twelve areas, or parcels comprising a total of approximately 250 acres. A conceptual plan, showing the potential location of the land use types is provided in Exhibit 2. The specific locations of system connection points have not yet been determined..

Exhibit 2 Land Use Concept Plan

A preliminary land use scenario is shown in Exhibit 3. The land use designations plan identifies twelve areas either designated for medium density residential (MDR), high density residential (HDR), mixed use commercial or neighborhood commercial. The proposed residential densities are shown to range from 3 to 8 dwelling units per acre for MDR and for HDR, 8 to 36 dwelling units per acre.

The number of single family and multi-family residential units is estimated to be over 1,780. There are 310,000 square feet of commercial uses, estimated by applying a floor area ratio (FAR) of 0.20 to the acreage of the parcels designated “mixed use commercial” and “neighborhood commercial”.

Study Objectives

The specific study objectives are:

- Find the range of sewer demands projected for the development
- Find the range of water demands projected for the development
- Provide a general description of how the area will be served by the existing systems

STAR Consulting
 439 W. Plumb Lane Reno, NV 89509

 Email: erin@starconsultingnv.com

Principal Findings

This project is located on both sides of US 395, between Saliman Road and Airport Road and 5th Street and William Street.

Assuming a preliminary land use estimate, at build out the project will generate approximately:

- 1,628,185 gpd (peak flow rate) of sewage west of the Highway
 - 503,250 gpd (peak flow rate) of sewage east of the Highway
-
- The recommended sewer line through the development on the north-south spine road is a 15" diameter line. No public sewer shall be less than 8" in diameter.
 - No individual sewer service connection shall be less than 4" in diameter.
 - All gravity sewers must be so designed and constructed to give mean velocities for the design condition, when flowing full or half full, of not less than two feet (2') per second minimum nor more than ten feet (10') per second maximum.
 - Mannings formula shall be used in determining the slope, velocity, design flow and diameter using "n" coefficients for the appropriate pipe material to be used. Mannings "n" for PVC is thirteen thousandths (0.013). The minimum pipe slope for eight-inch (8") pipe is five tenths of a percent (0.5%).
 - Minimum pipe slope for dead end sewers shall be five tenths of a percent (0.5%) unless it can be shown by calculations that the velocity in the pipe is two (2) fps or greater unless waived by the utilities director or designee.
 - The sewer collection system and HCS connections are proposed to be covered with at least 3' of earth.
 - Maximum spacing for manholes shall be four hundred feet (400') for all lines smaller than fifteen inches (15"), and five hundred feet (500') for lines fifteen inches (15") to twenty-four inches (24"), and six hundred feet (600') for twenty-four inches (24") and larger

2. Demand Analysis

Sewer:

A Public Sewer extension line and new public manholes will be proposed with this project. The Public Sewer line will be designed and constructed via an approved Public Sewer Plan. It is anticipated that the new public sewer lines will be installed in public rights of way, to be dedicated with each phase of development. The system in each phase will drain to either existing lines in Saliman and 5th or to a trunk line in the Lompa Ranch Spine Road. The area east of the Highway will drain to Airport Road.

The following flows are based on Chapter 12.06.280 of the Carson City code.

West of Highway 395								
Parcel	Acreage	Land Use	Equivalent Population per Acre (12.06.270.B)	Population Estimate	Average Daily Flow Rate (150 gpcd)	Minimum Daily Flow Rate (90 gpcd)	Peak Design Flow Rate (250 gpcd)	Infiltration (200gal/acre/day)

Totals WEST	203.37			6,513	976,911	586,147	1,628,185	40,674
East of Highway 395								
Parcel	Acreage	Land Use	Equivalent Population per Acre (12.06.270.B)	Population Estimate	Average Daily Flow Rate (150 gpcd)	Minimum Daily Flow Rate (90 gpcd)	Peak Design Flow Rate (300 gpcd)	Infiltration (200gal/acre/day)
J	16.1	High Density Res.	60	966	144,900	86,940	289,800	3,220
K	21.1	Medium Density Res.	29	612	91,785	55,071	183,570	4,220
L	8.3	Commercial	12	100	14,940	8,964	29,880	1,660
Totals EAST	45.5			1,678	251,625	150,975	503,250	9,100

FLOW VELOCITY

Mannings equation:

$$\begin{aligned}V &= k / n * (A / P)^{2/3} * S^{1/2} \\k &= 1.49, \text{ for unit conversion} \\n &= 0.013\end{aligned}$$

For 8" Sewer Pipe:

Diameter of Pipe = 8" (0.67 ft)

Radius of Pipe = 4" (0.335 ft)

$$\begin{aligned}A &= \text{Pi} * R^2 \\&= 3.1416 * (0.335\text{ft})^2 \\&= 0.352566 \text{ ft}^2 \\P &= 2 * \text{Pi} * R \\&= 2.105 \text{ ft} \\R_h &= A / P \\&= 0.167 \text{ ft} \\S_{\text{min}} &= 0.50\% \\S_{\text{max}} &= \text{N/A} \\V &= 1.49 / 0.013 * 0.167^{2/3} * 0.005^{1/2} \\V_{\text{min}} &= \mathbf{2.45\text{fps}}\end{aligned}$$

A velocity of 2 fps or greater is required. A minimum slope of 0.4% is permitted per section 12.06.300 of the Carson City code.

RATIO OF FLOW DEPTH

The common formula for gravity flow in pipes is called Manning's formula and is written as:

$$Q = 1.5/n * A * R^{2/3} * S^{1/2}$$

Where Q = discharge capacity in (ft³/s)

1.5 = constant for U.S. units

n = channel roughness coefficient (Manning's n) dimensionless

A = cross-sectional flow area (not the cross section of pipe) in ft²

R = hydraulic radius of the pipe in (ft)

S = slope of the channel bottom, dimensionless

From the variables above the hydraulic radius of a channel R, is defined as the ratio of the cross-sectional flow area A to the wetted perimeter P.

In formula form: $R = A/P$

Where R = hydraulic radius of the pipe in (ft)

A = cross-sectional flow area (not the cross section of pipe) in ft²

P = wetted perimeter in ft

For: d=8", 12" and 15"
s=0.5%
n=0.013

The preceding water demand is an estimation only. In many cases the fire flow requirements, not supply or demand, will determine the minimum system improvements necessary.

The proposed development west of the highway is estimated to have an average day demand of 390,764 gallons. The proposed development east of the highway is estimated to have an average day demand of 251,625 gallons.

3. Proximity to Existing System

The existing water and sewer systems are illustrated in the follow diagrams from Carson City GIS:

North of Robinson:

South of Robinson:

ArcGIS Viewer for Flex

SOUTH HALF

Page 1 of 2

<http://vcegis/internal/ccstaff/>

1/13/2016

The sewer sizes are as follows:

- The sewer line in Robinson is 18" PVC
- The sewer line that bisects the northern portion the Ranch is 18" PVC
- The sewer line in 5th Street is 24" PVC
- The sewer line in Airport Road is 18" PVC

The water sizes are as follows:

- The large transmission main that runs along Robinson through the middle of the property is 24" PVC
- The main in Saliman at Robinson is 8" ACP
- The main into Robinson is 8" ACP
- On Saliman at Fifth st the main is 10" ACP
- The main on Fifth St is 16" ACP
- The main along Airport Rd. varies between 6" and 8" PVC

The proposed Lompa Ranch systems will tie into these existing infrastructure systems at Saliman, Robinson, 5th and Airport.

Email: erin@starconsultingnv.com

4. Conclusions and Recommendations

1. This project is located on both sides of US 395, between Saliman Road and Airport Road and 5th Street and William Street.
2. Assuming a preliminary land use estimate, at build out the project will generate approximately:
 - 1,628,185 gpd (peak flow rate) of sewage west of the Highway
 - 503,250 gpd (peak flow rate) of sewage east of the Highway
3. All public sewer design shall be in conformance with the Carson City Municipal Code.
4. Downstream sewer capacity shall be evaluated at the time of development.
5. Assuming a preliminary land use estimate, at build out the project will have a daily domestic water supply demand of approximately:
 - The proposed development west of the highway is estimated to have an average day demand of 390,764 gallons.
 - The proposed development east of the highway is estimated to have an average day demand of 251,625 gallons.
6. Water system capacity and fire flow shall be evaluated at the time of development.
7. The proposed Lompa Ranch water and sewer systems will tie into the existing infrastructure systems at Saliman, Robinson, 5th and Airport.

SUBMITTAL PACKET

- 6 Completed Application Packets (1 Original + 5 Copies) containing the following:
 - Application Form
 - Written Project Description
 - Site Plan
 - Proposal Questionnaire With Both Questions and Answers Given
 - Applicant's Acknowledgment Statement
 - Documentation of Taxes Paid-to-Date (1 copy)
 - Project Impact Reports (Engineering) (4 copies)
 - CD containing application digital data (preferably in pdf format)

Application Reviewed and Received By:

Submittal Deadline: See attached PC application submittal schedule.

Note: Submittals must be of sufficient clarity and detail such that all departments are able to determine if they can support the request. Additional Information may be required.

Project's Assessor Parcel Number(s): 010-041-16, 38, 52, 70, 71, & 73	Street Address E. of Saliman Rd., N of 5th St., S of Hwy 50, W of Airport Rd.	ZIP Code 89701
--	--	-------------------

Project's Master Plan Designation MUR, MUC, MUE, NC, OS	Project's Current Zoning SF1A and A	Nearest Major Cross Street(s) Saliman Rd/E. 5th St.
--	--	--

Briefly describe the components of the proposed project: In accordance with Carson City Municipal Code (CCMC) Section: 18.02.070. In addition to the brief description of your project and proposed use, provide additional page(s) to show a more detailed summary of your project and proposal.

This request will provide for a formalized Specific Plan at the Lompa Ranch and refines the overall land use designations based on actual site conditions, market demands, etc. Please refer to attached report for a highly detailed description.

PROPERTY OWNER'S AFFIDAVIT

I, See attached affidavits, being duly deposed, do hereby affirm that I am the record owner of the subject property, and that I have knowledge of, and I agree to, the filing of this application.

Signature Address Date

Use additional page(s) if necessary for other names.

STATE OF NEVADA)
COUNTY)

On _____, 20____, _____, personally appeared before me, a notary public, personally known (or proved) to me to be the person whose name is subscribed to the foregoing document and who acknowledged to me that he/she executed the foregoing document.

Notary Public

NOTE: If your project is located within the historic district, airport area, or downtown area, it may need to be scheduled before the Historic Resources Commission, the Airport Authority, and/or the Redevelopment Authority Citizens Committee prior to being scheduled for review by the Planning Commission. The Planning Division personnel can help you make the above determination.

PROPOSAL QUESTIONNAIRE REQUIREMENTS

Please list each question, then your response after each question.

To respond to a), please review the Goals and Policies listed in the Master Plan Checklist at the back of this packet. Choose as many of the Goals and its accompanying Policies that you can find to support your request for a Master Plan Amendment. After listing each one, state in your own words how your request meets each listed Goal and Policy.

You may want to acquire a free CD or purchase a paper copy of the Master Plan from the Planning Division, or review the copy in the Planning Office or in the reference section of the Ormsby Public Library on Roop Street, or use our website at www.carson.org

To respond to questions b), c) and d), list the question, then respond in your own words to each question, listing adjacent land uses and fully explaining how your proposal is compatible, provides a desired growth pattern for Carson City and the changes that have occurred between the time the Master Plan was adopted and the present time.

The applicant must make a finding of fact of a), b) and d), and c) if applicable, of the following:

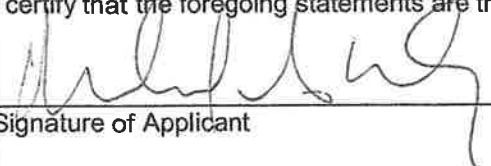

- a) Consistency with Master Plan.
 - 1) The proposed amendment is in substantial compliance with the goals, policies and action programs of the Master Plan. Provide written documentation of compliance with the Master Plan Policy Checklist.
- b) Compatible Land Uses.
 - 1) The proposed amendment will provide for land uses compatible with existing adjacent land uses, and will not adversely impact the public health, safety or welfare.
- c) Response to Change Conditions.
 - 1) The proposed amendment addresses changed conditions that have occurred since the plan was adopted by the Board of Supervisors and the requested amendment represents a more desirable utilization of land.
- d) Desired Pattern of Growth.
 - 1) The proposed amendment will promote the desired pattern for the orderly physical growth of the city and guides development of the city based on the projected population growth with the least amount of natural resource impairment and the efficient expenditure of funds for public services.

INCLUDE THE FOLLOWING ACKNOWLEDGMENT AT THE CONCLUSION OF YOUR FINDINGS:

ACKNOWLEDGMENT OF APPLICANT

The following acknowledgment and signature are to be the responses to the questionnaire prepared for the project. The original signed response and 5 copies (a total of 6 copies are to be submitted.)

I certify that the foregoing statements are true and correct to the best of my knowledge and belief.

Notary Public _____

4. That sufficient consideration has been exercised by the applicant in adapting the project to existing improvements in the area. Be sure to indicate the source of the information that you are providing (private engineer, development engineering, title report, or other sources). Describe how your proposed Zoning Map Amendment will not adversely impact drainage, sewer, water, traffic, schools, emergency services, roadways and other city services.
- A. Is drainage adequate in the area to support the density that may occur with the rezoning? How will drainage be accommodated? How have you arrived at this conclusion?
 - B. Are the water supplies in the area of your project adequate to meet your needs without degrading supply and quality to others? Is there adequate water pressure? Are the lines in need of replacement? Talk to the Utilities Department for the required information.
 - C. Are roadways sufficient in the area to serve the density that may occur from the rezoning? How have you arrived at this conclusion?
 - D. Will the school district be able to serve the student population that may occur from the rezoning? How have you arrived at this conclusion?
 - E. Are adequate means of access available for emergency vehicles to serve the site? What is the approximate response time for emergency vehicles? If your application is approved to rezone the property, will additional means of access be required for increased density? Or will existing access ways be adequate? How have you arrived at this conclusion?

ACKNOWLEDGMENT OF APPLICATION

NOTE: If your project is located within the historic district, airport area, or downtown area, it may need to be scheduled before the Historic Resources Commission, the Airport Authority, and/or the Redevelopment Authority Citizens Committee prior to being scheduled for review by the Planning Commission. The Planning Division personnel can help you make the above determination.

PROPOSAL QUESTIONNAIRE REQUIREMENTS

Please list each question, then your response after each question.

To respond to a), please review the Goals and Policies listed in the Master Plan Checklist at the back of this packet. Choose as many of the Goals and its accompanying Policies that you can find to support your request for a Master Plan Amendment. After listing each one, state in your own words how your request meets each listed Goal and Policy.

You may want to acquire a free CD or purchase a paper copy of the Master Plan from the Planning Division, or review the copy in the Planning Office or in the reference section of the Ormsby Public Library on Roop Street, or use our website at www.carson.org

To respond to questions b), c) and d), list the question, then respond in your own words to each question, listing adjacent land uses and fully explaining how your proposal is compatible, provides a desired growth pattern for Carson City and the changes that have occurred between the time the Master Plan was adopted and the present time.

The applicant must make a finding of fact of a), b) and d), and c) if applicable, of the following:

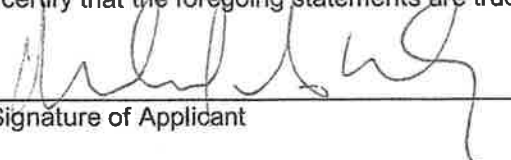

- a) Consistency with Master Plan.
 - 1) The proposed amendment is in substantial compliance with the goals, policies and action programs of the Master Plan. Provide written documentation of compliance with the Master Plan Policy Checklist.
- b) Compatible Land Uses.
 - 1) The proposed amendment will provide for land uses compatible with existing adjacent land uses, and will not adversely impact the public health, safety or welfare.
- c) Response to Change Conditions.
 - 1) The proposed amendment addresses changed conditions that have occurred since the plan was adopted by the Board of Supervisors and the requested amendment represents a more desirable utilization of land.
- d) Desired Pattern of Growth.
 - 1) The proposed amendment will promote the desired pattern for the orderly physical growth of the city and guides development of the city based on the projected population growth with the least amount of natural resource impairment and the efficient expenditure of funds for public services.

INCLUDE THE FOLLOWING ACKNOWLEDGMENT AT THE CONCLUSION OF YOUR FINDINGS:

ACKNOWLEDGMENT OF APPLICANT

The following acknowledgment and signature are to be the responses to the questionnaire prepared for the project. The original signed response and 5 copies (a total of 6 copies are to be submitted.)

I certify that the foregoing statements are true and correct to the best of my knowledge and belief.

Re: Lompa Ranch Specific Plan/Zone Change

Dear Mr. Plemel:

As you are aware my wife Martha L. Keating and myself Thomas B. Keating are in escrow with Blackstone Development Group, Inc. and or assigns, the potential Buyer, for our properties APN's 010-041-70 (62.050 acres) and 010-041-16 (010-041-16 (4.0 acres). These parcels are considered part of the **Lompa Ranch Specific Plan**. On September 29, 2015 we signed a **Property Owners Affidavit** on behalf of MTK Properties LLC for APN 010-041-16 and a **Property Owners Affidavit** on behalf of Thomas B. and Martha Keating Family Trust for APN 010-041-70 on behalf of Lompa Ranch Specific Plan/Zone Change submitted by Blackstone Development Group, Inc.

Blackstone Development Group, Inc. is proposing and processing a Specific Plan Amendment and Rezoning for our two parcels. We are requesting that the rezoning of the parcels take place upon close of escrow and recordation of the deeds respectively. At such time the deferred agricultural taxes which will be owed by our family shall be paid in full through escrow to the Carson City Treasurer.

The scheduled close date is on or before March 31, 2017. If the rezoning request is not approved by the Carson City Board of Supervisors, and/or escrow does not close, the zoning of our properties shall remain agricultural and no deferred taxes shall be owed.

Sincerely,

A handwritten signature in blue ink that reads "Thomas B. Keating". The signature is fluid and cursive.

Thomas B. Keating, Trustee for the Thomas B. Keating and Martha L. Keating Family Trust; Manager for MTK Properties LLC

February 19, 2016

Carson City Board of Supervisors
Carson City Parks and Recreation Commission
Carson City Planning Commission

Dear Members:

I want to send my appreciation to Donna Curtis, Parks and Rec Commission, for requesting a dog park be included in the proposed Lompa Ranch development project. There are lots of dog owners in Carson City and not enough fenced areas for dogs to run free. I've lived in Carson City since 1984 and have always had dogs. My current two are Siberian Huskies who love to run off leach. I have taken them to Dayton's spacious clean dog park, and more often to the James Lee Park behind Target where we rarely encounter anyone else with their dog. Fuji's dog park often gets muddy and seems to attract big unruly dogs that we prefer to avoid.

Hopefully, the new dog park will be completely fenced, have some natural sage brush areas and a sandy and/or grassy area. The Dayton dog park is an excellent example, well maintained with three separate fenced areas. The very best dog park I've discovered is in Bend, OR. EIGHTEEN acres of natural landscape completely fenced with winding trails. Now, that is a real dog park! It's worth checking out if you're ever in Bend. In fact, Bend has several dog parks.

With so many great parks in Carson City, it is a shame there are not more fenced dog parks. I can speak for many dog owners who will be thrilled to discover a second dog park. I'd like to think we can be considered "dog friendly" to those who visit our city.

Sincerely,

Reta Hanks

Re: Lompa Ranch Specific Plan/Zone Change

Dear Mr. Plemel:

As you are aware, I Dorothy Arraiz am in escrow with Blackstone Development Group, Inc. and or assigns, the potential Buyer, for my properties APN's 010-041-67 and (47.16 acres) and 010-036-04 (2.28 acres). I am also in escrow with Achilles Profit Sharing Plan and/or assigns the potential Buyer, for my properties APN's 010-041-71, 010-041-52 and 010-041-38 (137.34 acres collectively). These parcels are considered part of the **Lompa Ranch Specific Plan**. On September 30, 2015 I signed a **Property Owners Affidavit** on behalf of The Arraiz Family 1993 Trust for these specific parcels on behalf of Lompa Ranch Specific Plan/Zone Change submitted by Blackstone Development Group, Inc.

Blackstone Development Group, Inc. is proposing and processing a Specific Plan Amendment and Rezoning for my five parcels. I am requesting that the rezoning of the parcels take place upon close of escrow and recordation of the deeds respectively. At such time the deferred agricultural taxes which will be owed shall be paid in full through escrow to the Carson City Treasurer.

The scheduled close date is on or before March 31, 2017. If the rezoning request is not approved by the Carson City Board of Supervisors, and/or escrow does not close, the zoning of my properties shall remain agricultural and no deferred taxes shall be owed.

Sincerely,

A handwritten signature in cursive script that reads "Dorothy Arraiz".

Subject: Re proposed zoning change Lompa Ranch

Dear Sir/Madam

My letter refers to the proposed zoning of the Lompa Ranch. I am unable to attend the public hearing on Wednesday February 24th but am keen to voice my support of previous plan to convert area to parkland/ bicycle tracks.

As a resident of West Modoc Court, I back onto this beautiful expanse of land and see the mighty Sierra range and enjoy the spectacular views which make living in Carson City such a special place to reside.

The land I believe still has traditional Indian relics as this was a place where the Washoe tribe lived for a part of each year. The number of natives dwelling there was in the region of 1000 people, so this area has historical significance.

The land is visible from the freeway and makes a very pleasant outlook while driving along. It would be a great asset to Carson City if people could view a beautiful parkland/reserve and even be drawn to the city instead of bypassing it en route to Reno.

Improving the area by adding open areas adds to the quality of life of all the residents - young families, teens and seniors. It provides an area where they can exercise and enjoy the four beautiful seasons each year. Mills Park is an excellent park which is close but has limited use, one of the reasons being that dogs are not permitted. Having this new area could encourage different use to Mills Park.

There has been a resurgence of building in the area of East William Street heading out on Hwy 50 and to encourage further growth of shops and businesses, the development of a new recreation area would enhance and support this.

If the land is handed over for the development of yet another housing estate, there would be an initial inflow of capital to area. Over time however it would become just another dormitory backing onto other housing and leading to subsequent downgrading of this area. The city is not built on a peninsula or hemmed in, so it can afford to have green spaces between areas of development.

Carson City as the capital of Nevada needs to plan to maintain and enhance the beauty of our historic and important city. By adding open areas it adds to the ambience of our lovely capital.

We look forward to a positive outcome for the residents of this area

Yours sincerely

Kerry and Alexander Gilfillan

Board of Supervisors/Planning Commission
City Hall Complex
Carson City, Nevada 89701

I am a retired school teacher and have been a Carson City resident since 1972. For the most part, the city has been a great place to live and a wonderful place for families. I've been reading about the sale and future development for the Lompa Ranch area and I hope the city planners, developers, and city fathers make that area a showplace of what a development should look like for future planning. A suggestion I would offer would be that the planners and supervisors take their time and not rush into the residential and commercial venture without researching what similar cities have done with respect to preserving open space, protecting the aesthetics of this community, and creating a quality living environment. I would like the planners & developers to take a look at what Celebration, Florida has done over the years. It was a Disney model city project and is adjacent to Kissimmee, FL. There is a downtown commercial core with a lake-front setting (man-made lake) with a cobblestone square and ample walking sidewalks. Walking/biking trails abound and every home is situated in neighborhoods each within a 1.5 mile radius from the commercial center. Although the homes were all created with 1940's architecture, that may be an issue not conducive to our area. I'm sure you could "Google Earth" the area as part of the research and get a good look at the city concept, Or, possibly, someone in your office has been there and enjoyed the setting. I wanted to get this to you prior to any finalized plot plans and designs that may have been submitted. It would take a few minutes of your time to familiarize yourself with the excellent planning that went into the Disney model city concept.

Thank you for your interest and sharing this with staff in your offices and I hope this leads to a model city atmosphere for the Lompa development.

Sincerely

Mark Paloolian
